CITY OF RYE

NOTICE

There will be a regular meeting of the City Council of the City of Rye on Wednesday, October 21, 2015, at 7:30 p.m. in Council Chambers at City Hall. *The Council will convene at 6:30 p.m. and it is expected they will adjourn into Executive Session at 6:31 p.m. to discuss litigation and personnel matters.*

AGENDA

- 1. Pledge of Allegiance.
- 2. Roll Call.
- 3. General Announcements.
- 4. Draft unapproved minutes of the regular meetings of the City Council held October 7, 2015.
- 5. Issues Update/Old Business.
- 6. Continuation of Public Hearing to amend local law Chapter 197, "Zoning", of the Rye City Code by amending Section §197-2, "Districts, A: Residence Districts" to change the zoning designation of a property at 120 Old Post Road from the B-4, Office Building, District to a New RA-6, Active Senior Residence, District; and amending Section §197-86, "Tables of Regulations: Table A, Residence Districts Area Yard, Height and Miscellaneous Regulations" to add the proposed RA-6 zone.
- 7. Public Hearing to amend local law Chapter 191, "Vehicles and Traffic", of the Rye City Code by amending Section §191-19, "No parking any time", to prohibit parking on the north side of Osborn Road between Theall Road and the Harrison line and on the south side of Osborn Road between Boston Post Road and the Harrison line.
- 8. Residents may be heard on matters for Council consideration that do not appear on the agenda.
- 9. Consideration of referral to the Board of Architectural Review and City Consultant, the Special Permit Application submitted by New Cingular Wireless PCS, LLC ("AT&T") for modifications to its existing wireless telecommunications facility located at 66 Milton Road.
- 10. Miscellaneous communications and reports.
- 11. New Business.
- 12. Adjournment.

The next regular meeting of the City Council will be held on Wednesday, November 4, 2015 at 7:30 p.m. including the presentation of the 2016 Budget. The City Council will hold Budget Workshops on Monday, November 9, 2015, Monday, November 16, 2015 and Wednesday, November 18, 2015 beginning at 7:30 p.m.

- ** City Council meetings are available live on Cablevision Channel 75, Verizon Channel 39, and on the City Website, indexed by Agenda item, at www.ryeny.gov under "RyeTV Live".
- * Office Hours of the Mayor by appointment by emailing jsack@ryeny.gov or contacting the City Manager's Office at (914) 967-7404.

DRAFT UNAPPROVED MINUTES of the Regular Meeting of the City Council of the City of

Rye held in City Hall on October 7, 2015 at 7:30 P.M.

PRESENT:

JOSEPH A. SACK Mayor LAURA BRETT KIRSTIN BUCCI JULIE KILLIAN TERRENCE McCARTNEY RICHARD MECCA RICHARD SLACK Councilmembers

ABSENT: None

Councilwoman Brett made a motion, seconded by Councilman Slack and unanimously carried to adjourn into executive session to discuss a personnel matter at 6:31 p.m. Councilwoman Brett made a motion, seconded by Councilman Slack and unanimously carried, to adjourn the meeting at 7:32 p.m. The regular meeting convened at 7:35 p.m.

1. <u>Pledge of Allegiance</u>

Mayor Sack called the meeting to order and invited the Council to join in the Pledge of Allegiance.

2. Roll Call

Mayor Sack asked the City Manager to call the roll; a quorum was present to conduct official city business.

3. <u>General Announcements by the Council</u>

Councilman Mecca reported that he attended the Boat Basin Meeting and that boat slips were available. The Chamber of Commerce Meeting was held that morning: Judge Latwin gave a presentation on what the Rye City Court does; the City Manager presented on the new configuration for Smith, Elm and Purchase streets. He noted that the Chamber expressed interest in using the snow field as overflow parking for the merchants and asked that they be part of the conversation moving forward. He reminded residents that the Farmer's Market is open every Sunday until December from 8 a.m. to 2:30 p.m. Two new stores are opening including Rosemary's Vine and Mrs. Greens. Upcoming events include the Edith Read Fall Fest on October 17th from noon to five p.m. The Fire Department will be having an Open House on Sunday, October 11th as part of Fire Prevention Week at the Locust Avenue Firehouse from 10:00 am to 2:00 pm. The professional firefighters are selling pink t-shirts to raise money for breast cancer; they are available at the Locust Avenue Firehouse.

Councilman McCartney reported that the Rye Harrison game would be held on Saturday, October 10th at Harrison at 11:00 a.m. The RGC course has been open for five weeks and is improving. Night Life golf will be held on Thursday, October 8th at 7:00 p.m.; the closing scramble is on October 18th. He was pleased to note that the pool program for Rye Recreation seniors was very successful including 48 visits from Recreation members. Rye Recreation was in full swing with many events listed on the Recreation website. He asked for all user groups to weigh in on the new proposed Field Use Policy, noting that it will be discussed at a Recreation Commission meeting on October 29th.

Mayor Sack called Liz Northshield and Ann Moller to the podium to present the Blue Star Memorial which was installed at Rye City Hall. Ms. Northshield presented the City Council and the City with the Blue Star Memorial By-Way Marker on behalf of the Ceres Garden Club. They thanked the Council for their support and approval, Joe and Joe, Jr. of Lorono Construction for their generous donation and delivery of the stone, and Joe Alfredo of Alfredo Landscaping for the installation of the plaque. The Blue Star Memorial will stand as a way for everyone to say thank you to all members of the armed services, past, present and future.

4. <u>Draft unapproved minutes of the regular meeting of the City Council held September 16, 2015.</u>

Councilwoman Brett made a motion, seconded by Councilwoman Killian and unanimously carried to approve the minutes of the regular meeting of the City Council held on September 16, 2015.

5. <u>Issues Update/Old Business.</u>

Mayor Sack referred to an article in one of the local newspapers regarding the Rye Golf Club that included allegations made by the RGC Commission Chairman about purchasing practices. He directed the City Manager to conduct an investigation into the matter and outside counsel has been retained. He asked that the City Manager report back to the City Council when the investigation is completed.

Mayor Sack also gave an update on the United Hospital development, noting that the Public Hearings continued and that the City Staff had a meeting with the NYSDOT which was productive. He noted that one of the things discussed, and a way to mitigate traffic, is to add ramps to the highways instead of traffic circling through Rye. He noted that two of the biggest highways, 95 and I287, intersect at Rye; we are asking the State to identify this change as a regional issue. The Mayor also appeared at a Community panel in Port Chester that shares an interest in making sure the Starwood project is done in a correct and manageable way. He suggested that Rye and Port Chester's concern about traffic are very similar. The Mayor addressed the overlay district as the most significant as it has the most impact; it is 50 acres which is three times the size of the United Hospital site. A Port Chester Board member indicated that the overlay may be removed; he noted that the City has the ability to file a lawsuit. While that is not something that the City wants or prefers, they will do what they have to if the overlay is not removed. The City will continue to provide updates as the process progresses.

Councilwoman Brett provided an update on the building where the Smoke Shop is located. The site plan was approved by the Planning Commission whose scope of review regards the use of the building; the new use of the building is the apartments located on the second and third floors. The building is being renovated not torn down; any changes will be reviewed by the Board of Architectural Review. The Smoke Shop continuing as a tenant is an issue for the landlord. The City Council incentivized the landlord to keep the Smoke Shop as a tenant but the landlord did not avail themselves of that option. The building will be preserved but the aesthetic issue of the building will be reviewed by the BAR.

Councilman McCartney spoke about the claim submitted to TKI regarding the damages to the RGC greens. A meeting was held with TKI and negotiations are underway.

Mayor Sack announced that Mark Blanchard of the firm Blanchard and Wilson would be filling in for Corporation Counsel Kristen Wilson.

Councilwoman Killian reminded everyone that there would be a Consumer Solar Workshop at the Rye Free Reading Room on Tuesday, October 20th from 7:00 to 9:00 p.m.

- 6. Resolution authorizing the acceptance of funding through the NY Rising Community Reconstruction Program and providing authorization for the Mayor and City Council to Manager to enter into the following agreement and resolutions:
 - NY Rising Community Reconstruction Program Subrecipient Agreement
 - Resolution to adopt a Procurement Policy
 - Resolution to adopt a Citizen Participation Plan
 - Resolution to adopt an Affirmative Action Plan
 - Resolution to adopt Section 504 Policies and Grievance Procedures

Councilwoman Brett thanked the NY Rising Committee for their hard work in identifying flood mitigation projects eligible for this grant. An important part of the Council's responsibility is to determine what accepting the grant money means to the City, noting that flood mitigation is of paramount importance. She also thanked the staff of the Governor's Office of Storm Recovery for providing the City with a thorough document outlining the City's obligation to the State and to HUD if the funding is accepted.

Mayor Sack agreed that the NY Rising Committee should be commended for their hard work; that flood mitigation is an incredible problem in Rye that needs to be addressed but that the Subrecipient Agreement is wrong for the City of Rye. The Agreement sets rules that the City must agree to, some existing, some to be established, regarding the grant funding. The City would be obligated to HUD's rule if the money is accepted and the Mayor is not prepared to expose the City to HUD's criteria. He noted that he would not be voting for the agreement.

Councilman McCartney indicated that he was on the conference call with the State and agreed that the City needs to balance the need for flood mitigation money with the risk to do everything that HUD says. The wording in the memo from the State gives him peace of mind that we can accept the funding to improve the City's flood mitigation problem.

Councilwoman Killian spoke about the job of the City Council to research the obligations associated with accepting the NY Rising funding. She noted that other communities who had previously signed the NY Rising agreement, did so prior to July 2015 when HUD came out with their final AFFH rules so there was more onus on this Council to look at the impact of this agreement. She indicated that she would be voting to accept the funding.

Councilman Slack raised a question regarding the agreement, where the City is a subrecipient with the State, not HUD: does the agreement allow HUD to directly enforce any

breaches of the agreement or would the City's privity be with the State. Mark Blanchard said our privity is with the State who would be acting as an agent of HUD. HUD would enforce against the State in terms of how the grant would be administered but noted that it would not be impossible for HUD to intervene. Councilman Slack pointed out that the City has accepted HUD grant monies in the past and sought to confirm that since the City previously took HUD money, hasn't that already committed the City to the same type of agreements and conditions before the Council presently. Mark Blanchard noted that the City is not agreeing in perpetuity to the requirements of the grants, the grants have a lifespan connected to (a) the expenditure of the money or (b) proving that the money was expended properly. The Mayor noted the language of those agreements from over twenty years ago is not the same as what is currently before the Council and these grants are for considerably more money.

Speakers on the NY Rising funding included:

Bernie Althoff, co-Chair of the NY Rising Committee and Chair of the Rye Flood Advisory Committee, said that the NY Rising Committee was tasked with gathering data and identifying flood mitigation projects, noting that they cited work by the engineering firm Parsons and Brinckerhoff. They identified four projects including (1) stopping water at the airport, (2) reprogramming the Bowman Avenue Sluice Gate, (3) expanding the capacity of the upper pond above the dam, and (4) implement changes on Milton Road to reduce flooding. He noted that the Council had directed the Rye Flood Committee to obtain grant funding. He said if this funding is not accepted that flood mitigation efforts in Rye will be damaged for ten years. The letter from the State provides protection to the City and notes that it does not increase the City's exposure to HUD by accepting this funding. He urged the Council to accept the funding to move the flood mitigation projects forward.

Holly Kennedy, co-Chair of the NY Rising Committee and member of the Rye Flood Advisory Committee, extended her appreciation to the Council for their efforts on flood mitigation. The NY Rising Committee strongly recommends that the funding be accepted, especially given the assurances by the NY Rising attorney that Rye would not be subject to additional HUD fair housing requirements. The risk to the City is minimal given that the State would be beholden to HUD, and that the chosen flood mitigation are infrastructure projects. She reviewed physical and financial damage from recent storms. Flood mitigation is extremely expensive and requires collaboration with different levels of government for upstream mitigation that will help flooding in Rye. She urged the Council to accept the funding as being in the best interest of Rye taxpayers to address the risk of future flooding in Rye.

Greg Howells, member of the NY Rising Committee and director of the YMCA, spoke about the damage to the YMCA in previous storms and the mitigation steps that they have already taken, noting that those efforts are still not enough given the amount of flooding in Rye. He felt that the acceptance of the funding not only provides help now, but assist the City in leveraging additional larger grants in the future with help from the Governor's office.

Pat Levine, former Councilwoman, spoke on behalf of the Milton Harbor House noting that the NY Rising funding is a unique opportunity and hopes that the Council accepts the funding.

Carolina Johnson thanked the Council for their due diligence but said that even if the Council does not accept the funding it will not prevent HUD from coming after the City.

Mayor Sack said accepting the funding would go against a tradition in Rye of not letting other entities tell the City what to do. He cited the example of the Nursery Field where Westchester County was willing to provide funding, but with the proviso that they would be able to use the field for their own use; Rye declined the County funding. It is evident in looking at White Plains that HUD has engaged in serious protracted litigation with Westchester County over the same issue. In exchange for three million dollars we would be giving up Rye's right to govern itself and not have to take orders from another layer of government. He stated that he would not be signing the agreement.

Councilwoman Brett made a motion, seconded by Councilman McCartney to adopt the following Resolution:

RESOLVED, that the City Council authorize the acceptance of funding from the New York Rising Community Reconstruction Program including the necessary agreements and resolutions and authorize the City Manager to enter into those agreements.

ROLL CALL:

AYES: Councilmembers Brett, Bucci, Killian, McCartney, Mecca, and Slack

NAYS: Mayor Sack

ABSENT: None

The Resolution was adopted by a 6-1 vote.

7. Continuation of Public Hearing to amend local law Chapter 197, "Zoning", of the Rye City Code by amending Section §197-2, "Districts, A: Residence Districts" to change the zoning designation of a property at 120 Old Post Road from the B-4, Office Building, District to a New RA-6, Active Senior Residence, District; and amending Section §197-86, "Tables of Regulations: Table A, Residence Districts – Area Yard, Height and Miscellaneous Regulations" to add the proposed RA-6 zone.

This item was deferred to the October 21, 2015 City Council meeting.

Councilwoman Brett made a motion, seconded by Councilman McCartney and unanimously carried to continue the Public Hearing to October 21, 2015.

8. <u>Continuation of Public Hearing to amend local law Chapter 133, "Noise", of the Rye City Code regarding regulations on mechanical rock removal.</u>

Mayor Sack outlined revisions to the original draft local law including: a more precise definition of mechanical rock excavation, dust mitigation requirements, changed the consecutive calendar day limit to 38 days, eliminated the certified mail requirement, added a one time 7-day calendar day waiver at the discretion of the City Manager, two chipping machines can be used simultaneously, and added a more precise definition of the utilities exemption. These revisions were the result of public comment and City Council feedback. Additionally, the Council added some clarifications: definition of the term "unexpected circumstances", certification by the property owner that any mechanical rock excavation can be completed within the allowed 38 days, a copy of the certificate of mailing must be supplied to the Building Department prior to the commencement of chipping or blasting, a property owner who applied for a permit and complied with the provisions of the law may apply for an additional 7-day waiver, in addition to the original 38 days, from the City Manager due to unexpected circumstances. The Mayor said that the changes to the law are significant and historic as previously there were no restrictions on rock chipping.

Mayor Sack asked for input from the City Council on the proposed law:

Councilwoman Brett spoke of the lengthy and thorough process which resulted in a chipping restriction which provides certainty to neighbors surrounding chipping projects. It requires builders and developers to better plan their projects. The Council reached a consensus by working together and listening to those who engaged in the Public Hearings.

Councilman Mecca noted that the Council listened to all the comments from the public and the Rock Chipping group and felt the law before them was a good compromise.

Councilman Slack thanked the Rock Chipping Study Group for their hard work, extensive diligence, robust discussion, tremendous thought and ultimately an open mind. Those recommendations formed the basis for the original proposed law and for the bill currently before the Council. He thanked Richard Mecca for his leadership and work on the Study Group noting that his wisdom and balance helped to bring the recommendations of the Study Group to life as part of the proposed law. He was pleased to note that the proposed law is still based on the recommendations of the Study Group originally presented at the June 10th Council Meeting with little deviation. The eight features regarding rock chipping include: duration, allowed hours, required permit, notice to neighbors, holiday restrictions, school testing restrictions, number of chippers/hammers, and restrictions on rock crushing on site. He thanked the Council for coming to a consensus without being disagreeable, especially on a difficult issue with strong differences of opinion. The legislation will greatly benefit the community as Rye will have the most comprehensive set of rock chipping regulations in Westchester, and perhaps all of the State. No other community has addressed the issue of rock chipping in a comprehensive or thoughtful way. Rye is once again a leader, not a follower.

Councilman McCartney thanked the Rock Chipping Group as well as all those who spoke up during the Public Hearings. The Council sought to balance all the issues and comments in arriving at a compromise encompassing all these factors. He urged everyone to look dispassionately at the proposed law and recognize how much of what the Rock Chipping Group outlined was included and that it is a fair compromise.

Council woman Bucci noted that the compromise was difficult to reach and thanked the Council for their hard work. She thanked the Rock Chipping Committee for their hard work and for the community engagement on this issue.

Council woman Killian thanked the Council for being gracious and respectful despite their disagreements, noting that there are many other items outstanding in the community that the Council has been thinking about amidst the rock chipping discussion. She thanked all those who participated in the Public Hearings as it helped the Council frame the issue. She also hoped that there would be some healing in the community so everyone could move forward. She was happy that dust mitigation was included but indicated that the issue of dust from stones being installed on houses may not be addressed by this law. More research may be necessary with input from the Building Department to revisit this item. Extending the allowable days to chip in this proposed law addresses the unintended consequence of pushing construction projects to the time with better weather. The proposed law addresses this and she is comfortable with the draft law reached by the Council.

Jonathan Kraut, representing a coalition of builders in Rye, asked the Council to consider two changes to the proposed law: (1) that days that are declared states of emergency for inclement weather not be counted in allowable chipping days and (2) storm water utility connections should also be exempt. He urged the Council to note that they were about to adopt the most restrictive law not only in Westchester County but New York State; the builders would

like the law to be more liberal. He commended the Council for their handling of the issue. The City Council agreed to include the exemption for storm water utility connections.

Members of the public who commented on rock chipping issues and the proposed law included: *Lori Fontanes*, *Bob Zahm*, *Alan Clark*, *Sal Inguanti*, *and Nancy Collins*, who spoke about the process arriving at the proposed law, expanding the distance for notification to neighbors, publication of all extensions given by the City Manager along with the reason for the extension, the removal of the Thanksgiving and Christmas exclusions, and public health ramifications from allowing two chippers.

Councilwoman Brett made a motion, seconded by Councilman Mecca and unanimously carried to close the Public Hearing.

Councilman Mecca made a motion, seconded by Councilman Slack to adopt the following local law:

CITY OF RYE LOCAL LAW NO. 2015

A local law to amend Chapter 133 "Noise" of the Code of the City of Rye by renaming and amending Section 8 as follows "Permit Required; Construction work, mechanical rock removal and blasting restrictions"; amending Section 133-9 "Penalties for Offenses" to increase the penalties, and amending Section 133-10 "Exempt Acts" to exempt certain entities from the requirements as follows:

Be it enacted by the City Council of the City of Rye as follows:

<u>Section 1:</u> Chapter 133-8 "Permit Required; Construction work, mechanical rock removal and blasting restrictions:

A. Whenever used in this section, the following terms shall have the meanings indicated:

ROCK EXCAVATION PERMIT – A permit issued for rock excavation on a Subject Property.

SUBJECT PROPERTY – The lot for which a mechanical rock excavation permit or blasting permit pursuant to Chapter 98 is issued.

TESTING DAYS – A day when a school is administering a state or federally mandated test or a day when the school is administering an advanced placement test, PSAT, SAT, ACT, final examinations or other similar tests, as long as the school or district posts on their web site at the beginning of each school year such dates and provides such information at the beginning of the school year to the Building Department.

MECHANICAL ROCK EXCAVATION – Mechanical Rock Removal with the

use of a mechanical hammer or similar device, but excluding drilling or boring of holes, and excluding the removal of man-made structures such as concrete steps or driveways.

UNEXPECTED CIRCUMSTANCES – Circumstances unforeseen by the property owner including mechanical failure of a machine, unexpected conditions or inclement weather.

- **B.** No Mechanical Rock Excavation or blasting may take place unless a permit is obtained. All permits shall identify the purpose for which the Rock Excavation Permit or blasting permit is being issued, the owner of the Subject Property, including any partners of any limited liability company, and the permitted duration of the Mechanical Rock Excavation or blasting. The application for a Mechanical Rock Excavation or blasting Permit shall include a certification by the property owner that the property owner has reasonably determined that any Mechanical Rock Excavation can be completed within the period in in subsection B(i) below.
 - (i) Mechanical Rock Excavation and blasting shall be restricted to thirty (38) consecutive calendar days.
 - (ii) No new/additional Mechanical Rock Excavation Permit or blasting permit (see Chapter 98) shall be issued for the same Subject Property for 18 months from the date any previously issued permit expires.
- C. No Mechanical Rock Excavation Permit or blasting permit shall be issued unless the Applicant has a dust mitigation plan approved by the Building Department. Such dust mitigation plan shall incorporate the best dust control practices including, but not limited to, a water spray system (air suppression or surface wetting). All dust mitigation plans shall include measures to control water runoff as a result of any water spray program.
 - (i) Trucks and other vehicles used to transport particulate matter shall be covered and any particulate matter kept on site shall be sufficiently wetted or stored to prevent particulate matter from becoming airborne.
 - (ii) Portable hand water sprinklers or hose sprinklers are acceptable means of wetting for dust control. The water sprays or jets shall be designed to break the water stream into small droplets or otherwise to provide effective wetting.
 - (iii) Suitable drainage means shall be provided for the removal of water and sludge which drains from the operation.
 - (iv) Soil or debris piles shall be moistened if dust is being emitted from the piles due to prevailing winds and not from a momentary gust. Adequately secured tarps, plastic or other material may be required by the Building Department to further reduce dust emissions.

- D. Upon receiving a Mechanical Rock Excavation Permit or blasting permit, any individual who intends to engage in Mechanical Rock Excavation or blasting on any property in the City of Rye shall register with the City at least seven (7) calendar days prior to the commencement of such activities. Upon such notification, the Subject Property will be listed on the City of Rye website showing the earliest commencement date and when the thirty-eight (38) day period ceases. Such notice shall be displayed in a visible location at the Subject Property.
 - (i) In addition to notifying the City as required above, the individual must also notify the neighbors by sending out a public notification prepared by the Building Department. The applicant shall prepare a notification list, using the most current City of Rye Tax Maps and Tax Assessment Roll, showing the Tax Map sheet, block and lot number, the owner's name and owner's mailing address for each property located wholly or partially within 500 feet of the Subject Property. If a property on the public notification list is also listed as a cooperative or an apartment, the notice shall only be mailed to the property owner of record. These mailing requirements must be performed in accordance with the following requirements:
 - (ii) The mailing shall be limited solely to the public notice provided by the City Building Department.
 - (iii) The notice shall be mailed to all property owners by regular U.S. mail at a post office or official depository of the Postal Service, at least ten (10) days prior to the commencement of Mechanical Rock Excavation or blasting.
 - (iv) The individual must provide a copy of the certificate of mailing to the City Building Department prior to the commencement of any Mechanical Rock Excavation or blasting.
- E. Construction work prohibited at certain hours and on certain days. No person shall engage in construction work earlier than 7:30 a.m. or later than 6:30 p.m., prevailing time, on weekdays; earlier than 10:00 a.m. or later than 5:00 p.m., prevailing time, on Saturdays; or at any hour on Sundays or any of the following holidays: New Year's Day, Presidents' Day, Martin Luther King Jr. Day, Memorial Day, Independence Day, Labor Day, Columbus Day, Veterans Day, Yom Kippur, Thanksgiving Day, Christmas Day and New Year's Day.
- **F**. Notwithstanding any provision of §133-8 to the contrary, an individual may perform construction work him/herself on property on which such individual then resides as follows:
 - (i) Weekdays, between 7:30 a.m. and 8:00 p.m.
 - (ii) Saturdays and Sundays (including holidays), between the hours of 10:00 a.m. and 8:00 p.m.

- G. Mechanical Rock Removal, including Mechanical Rock Excavation, and blasting are prohibited at certain hours and on certain days. No person shall engage in Mechanical Rock Removal, including Mechanical Rock Excavation, as defined in Subsection A, or blasting operations using explosives as defined by § 98-40, within the City of Rye after the hour of 3:30 p.m. or before 9:00 a.m. on weekdays or at any time on Saturday and Sunday; or on any of the following holidays and time periods: New Year's Day, Presidents' Day, Martin Luther King Jr. Day, Memorial Day, Independence Day, Labor Day, Columbus Day, Veterans Day, Yom Kippur, Thanksgiving Day through Thanksgiving weekend and Christmas Day through New Year's Day except under authority of a special permit issued by the City Manager. In addition, Mechanical Rock Removal, including Mechanical Rock Excavation, and blasting will be prohibited within 500 feet of a school on Testing Days.
- **H.** No person performing Mechanical Rock Removal shall have more than two machines and two hammers operating on the Subject Property at the same time. Rock crushing shall not be permitted on the Subject Property.
- I. A property owner who has properly applied for and received a permit for Mechanical Rock Excavation or blasting, and has otherwise complied with the provisions of this law, may apply to the City Manager for an additional, one-time seven (7) calendar day waiver in addition to the thirty eight (38) days above, subject to all the other restrictions contained herein, to be granted at the discretion of the City Manager on a reasonable basis under a totality of the circumstances presented. If the waiver is granted, the additional seven (7) day period will be set by the City Manager, and the period will be listed on the City website.
- J. A property owner who has properly applied for and received a permit for Mechanical Rock Excavation or blasting, and has otherwise complied with the provisions of this law, may apply to the City Manager for an additional, one-time seven (7) consecutive calendar day waiver in addition to the thirty-eight (38) days above, subject to all the other restrictions contained herein. The property owner shall have the burden of demonstrating to the City Manager that a waiver is warranted due to Unexpected Circumstances. The City Manager, at his sole discretion, can require documentation supporting Unexpected Circumstances including a certification that the Unexpected Circumstances prevented the completion of Mechanical Rock Excavation or blasting during this period. If the waiver is granted the period will be listed on the City website.

Section 2: Chapter 133-9. "Penalties for offenses".

In the event an activity is not being performed in accordance with this chapter, the owner of the property or the owner's agent or the person performing such violation shall be notified to suspend all work, and any such persons shall forthwith stop such work and suspend all activities. Any person who violates

any provision of this chapter shall be guilty of an offense and shall, upon conviction thereof, be subject to a fine of not more than \$250 or imprisonment for a term of not more than 15 days, or both except that violations under § 133-8, Permit Required; Construction Work, Mechanical Rock Excavation and blasting restrictions, shall be treated as individual violations for each and every such violation and noncompliance, respectively, thereof, shall be punished upon such first conviction by a fine of not more than \$1,000, an order to suspend construction work, mechanical rock removal and/or mechanical rock removal and/or excavation and/or blasting on the site for a period of not more than 72 hours, or by imprisonment not exceeding 15 days, or any combination of such fine, suspension, and imprisonment, and each day that such violation shall continue shall be construed as a separate offense. Upon any subsequent conviction for the same offense such person shall be subject to a fine of not more than \$2,000, or an order to suspend construction work, mechanical rock removal and/or excavation and/or blasting on the site for a period of not more than 72 hours, or by imprisonment not exceeding 15 days, or any combination of such fine, suspension and imprisonment. The imposition of one penalty for any violation shall not excuse or remedy such violations.

Section 3: Chapter 133-10. "Exempt acts".

§ 133-10. Exempt acts.

The following activities and agencies are exempt from the requirement of this Chapter:

- A. The actions of governmental agencies, including the Rye City School District and the Rye Neck Union Free School District, shall be specifically exempt from the requirements of this chapter.
- B. Removal of rock for the sole purpose of the installation of gas or electrical service, and the installation of water, sewer service or storm water drainage, shall be exempt from sections B and D above. Any property owner seeking to utilize this exemption must certify in writing that the rock removal is solely for this purpose, and must provide at least 24 hours notice to the City of same. The property owner must provide new certification and notice if the removal lasts more than three (3) days. Upon such notice(s), the activity will be listed on the City website.

Section 4: Severability.

If any clause, sentence, paragraph, section or part of any section of this title shall be adjudged by any court of competent jurisdiction to be invalid, such judgment shall not affect, impair or invalidate the remainder thereof, but shall be confined in its operation to the clause, sentence, paragraph, section or part thereof directly involved in the controversy and in which such judgment shall have been rendered.

Section 5: Effective date.

This local law will take effect immediately on filing in the office of the Secretary of State.

ROLL CALL:

AYES: Councilmembers Brett, Bucci, Killian, McCartney, Mecca, Slack

and Mayor Sack

NAYS: None ABSENT: None

The Local Law was adopted by a 7-0 vote.

8A. <u>Discussion to amend local law Chapter 191, "Vehicles and Traffic", of the Rye City Code by amending Section §191-19, "No parking any time", to prohibit parking on the north side of Osborn Road between Theall Road and the Harrison line and on the south side of Osborn Road between Coolidge Avenue and the Harrison line.</u>

City Manager Serrano explained that the City had received emails regarding parking on the lower section of Osborn Road which will be discussed the next night at the Traffic and Pedestrian Safety Committee meeting. Sam DiEdwards, 161 Osborn Road, said that commuters have been parking on the road and it is simply not wide enough. Harrison eliminated parking and moved the yellow line over so it is safe in Harrison. Jane Fitzpatrick, 152 Osborn Road, said there has never been a parking problem and raised the safety concern and their desire to avoid any accidents. Cian Ribetto, an Osborn parent, asked the Council to consider the bigger picture on Osborn road and the safety of the school children. Councilwoman Killian noted that the Traffic and Pedestrian Safety Committee has discussed the issues around the Osborn school many times and is pleased that there will be a meeting tomorrow with the School Administration. Ann Schrock, 2 Walker Avenue, also an Osborn parent mentioned that there was a request to make Osborn one-way during pickup and requested that a police officer be at Osborn at dismissal. Mayor Sack noted that a meeting was being held the next day to discuss the situation.

Mayor Sack made a motion, seconded by Councilwoman Brett and unanimously carried, to adopt the following Resolution:

WHEREAS, the Council wishes to consider amending Chapter 191, "Vehicles and Traffic" of the Code of the City of Rye by amending Sections 191-19; and

WHEREAS, it is now desired to call a public hearing on such proposed amendments to the law, now, therefore, be it

RESOLVED, by the Council of the City of Rye as follows:

Section 1. Pursuant to Section 20 of the Municipal Home Rule Law and the Charter of the City of Rye, New York, a public hearing will be held by the Council of said City on October 21, 2015 at 7:30 P.M. at

City Hall, Boston Post Road, in said City, for the purpose of affording interested persons an opportunity to be heard concerning such proposed local law.

Section 2. Such notice of public hearing shall be in substantially the following form:

PUBLIC NOTICE CITY OF RYE

Notice of Public Hearing on a proposed local law to amend Chapter 191, "Vehicles & Traffic" of the Rye City Code by amending §191-19, "No parking any time" to prohibit parking on the north side of Osborn Road between Theall Road and the Harrison line and on the south side of Osborn Road between Boston Post Road and the Harrison line.

Notice is hereby given that a public hearing will be held by the City Council of the City of Rye on the 21st day of October 2015 at 7.30 P.M. at City Hall, Boston Post Road, in said City, at which interested persons will be afforded an opportunity to be heard concerning a proposal to amend Chapter 191 "Vehicles and Traffic" of the Code of the City of Rye, New York, by amending Section §191-19, "No parking any time" to prohibit parking on the north side of Osborn Road between Theall Road and the Harrison line and on the south side of Osborn Road between Boston Post Road and the Harrison line.

Copies of said local law may be obtained from the office of the City Clerk.

Diane C. Moore Deputy City Clerk

Dated: October 9, 2015

9. <u>Summary of the 2016 Budget Process and Consideration of setting the 2016 Budget Workshop schedule.</u>

The 2016 Budget schedule dates were set as follows:

Wednesday, November 4th: Presentation of the Budget

Monday, November 9th: Capital Projects Fund

Building & Vehicle Fund Department of Public Works

Monday, November 16th: Public Safety: Police and Fire

Recreation

Golf Enterprise Fund

Boat Basin Enterprise Fund Rye TV Special Review Fund

Wednesday, November 18th: Rye Free Reading Room

Contract Service Agencies

DRAFT UNAPPROVED MINUTES - Regular Meeting - City Council October 7, 2015 - Page 14

Wednesday, December 2rd: Public Hearing on the Budget Wednesday, December 16th: Adoption of the Budget

10. Residents may be heard on matters for Council consideration that do not appear on the agenda.

Bob Zahm, 7 Ridgewood Drive, thanked the Council for taking action on multiple issues noting that they are a deliberative body taking appropriate action for the City. He identified a safety issue on Midland Avenue under the I-95 bridge going towards Home Depot which needs to be cleaned and remediated; the City will notify the appropriate authority to correct the situation. He asked if parking was allowed on the snow field, and if not, when would enforcement commence. The City Manager said that parking is currently allowed but a discussion is ongoing regarding possible parking permits and hours of operation.

10A. Consideration of a request for a waiver from the Rock Chipping Moratorium for the project located at 50 Cowles Avenue.

Councilman McCartney made a motion, seconded by Councilwoman Brett to adopt the following Resolution:

RESOLVED, that the City Council of the City of Rye hereby approves the request for a waiver from the Rock Chipping Moratorium and authorizes no more then eight (8) chipping days within a fourteen (14) calendar day period upon notice and coordination with the City Manager's office and notify the City Manager's office at the completion of each chipping day so that the amount of chipping is recorded.

ROLL CALL:

AYES: Councilmembers Brett, Bucci, Killian, McCartney, Mecca, Slack and Mayor Sack

NAYS: None ABSENT: None

The Resolution was adopted by a 7-0 vote.

11. Resolution to transfer \$15,000 from the Contingency account to fund the restoration and placement of the City of Rye Mile Markers.

Councilwoman Brett said that beyond the cost of the restoration of Mile Markers 25 and 26, the Landmarks Committee was advised to create a stone cast of Mile Marker 25 as it is the only mile marker in Rye that still has the original inscription. The cost of these projects exceeded the original estimates so additional money must be taken from contingency. Mayor Sack asked that the City Manager approve all future expenditures; Mr. Serrano noted that the Landmarks Committee has been advised of this.

Mayor Sack made a motion, seconded by Councilwoman Brett, to adopt the following Resolution:

WHEREAS, City staff has determined that the amounts required for the cost of restoration and placement of the City of Rye Mile Markers has exceeded the amount budgeted, and;

WHEREAS, the General Fund Contingent Account has a balance of \$50,000, now, therefore, be it;

RESOLVED, that the City Comptroller is authorized to transfer \$15,000 from the General Fund Contingent Account to the Street Maintenance Account.

ROLL CALL:

AYES: Mayor Sack, Councilmembers Brett, Bucci, Killian, Mecca,

McCartney and Slack

NAYS: None

12. Resolution to declare certain City of Rye Police equipment as surplus.

Mayor Sack made a motion, seconded by Councilwoman Brett, to adopt the following Resolution:

WHEREAS, the City has been provided with a list of City equipment identified as being obsolete or will become obsolete during 2015, and

WHEREAS, the Police Department have recommended that said equipment be declared surplus, now, therefore, be it

RESOLVED, that said equipment are declared surplus, and, be it further **RESOLVED**, that authorization is given to the City Comptroller to sell or dispose of said equipment in a manner that will serve in the best interests of the City.

ROLL CALL:

AYES: Mayor Sack, Councilmembers Brett, Bucci, Killian, McCartney,

Mecca and Slack

NAYS: None

List of Surplus Equipment:

- 2011 5 Ton model M925A1 Military transport truck (Vin#2320012064088)
- 1983 Dresser Forklift, Model M10A (Vin#3930010543833)

PLANNING, TRANSPORTATION, ENVIRONMENT AND DEVELOPMENT RYE, NEW YORK FAIRFIELD, CONNECTICUT

September 24, 2015

Rye City Council 1051 Boston Post Road Rye, New York 10580

Subject:

Analysis and Comparison of Potential Area Roadway Conditions – Proposed Senior Housing Development, 120

Old Post Road, Rye, New York

Dear Mayor Joseph Sack and Members of the Council:

As requested by the City Planner and Engineer at a recent meeting, we have conducted analyses of each of the existing traffic patterns surrounding the project site at 120 Old Post Road to provide the City with a comparison to identify potential benefits with and without off-site transportation improvements and, in one case, a modification to access to the subject property.

Project Description

The proposal is to demolish the existing, vacant office building located on the subject property and construct a senior housing development comprising approximately 135 units. Access will be maintained in proximity to the existing site driveway to Playland Access Drive.

We understand there is a concern over traffic congestion currently found on adjacent and nearby roadways in proximity to the subject property during peak hours between 8:00 to 9:00 A.M. and 5:00 to 6:00 P.M. It should be noted that in the pre- and post-build conditions of the proposed project the subject property has a minimal impact on the existing traffic patterns and that the conversion of the property to an age-restricted multi-family development will generate less traffic than a fully tenanted office building. Notwithstanding the foregoing, the City is interested in investigating possible mitigation to address current traffic congestion and has requested that as part of this review for the proposed residential development of the subject property, these options be investigated to determine potential benefits, if any, on each of these items.

FREDERICK P. CLARK ASSOCIATES, INC.

PLANNING, TRANSPORTATION, ENVIRONMENT AND DEVELOPMENT RYE, NEW YORK FAIRFIELD, CONNECTICUT

Mayor Joseph Sack and Members of the Council Page 2 September 24, 2015

Possible Transportation Improvements

The following options were considered and included in this analysis:

- 1. Construct a right turn lane on the southern side of Playland Access Drive along the site frontage from the intersection with Old Post Road to the vicinity of the Medical Building Access Drive;
- 2. Convert the existing Emergency Access Drive to the site to a full-movement access drive in addition to maintaining the existing site access drive to Playland Access Drive; and,
- 3. Modify the northbound Boston Post Road exit ramp to Playland Parkway to permit left turn movements on Playland Parkway to access Interstate 95.
- 4. Install a traffic signal at the Old Post Road/Playland Access Drive and/or install a second traffic signal at the Old Post Road/Thruway Access Drive.

Analysis and Comparison

1. Added Right Turn Lane – Field observations and the results of analyses of the southbound approach of Playland Access Drive to Old Post Road indicate motorists experience traffic delays during peak hours. If a separate right turn lane was to be constructed on the southbound approach beginning at Old Post Road and terminating approximately 350 Feet to the north towards the medical building driveway, the results of the analysis indicate that during the weekday morning peak hour the Level of Service would improve from Level of Service "F" to "E," with a reduction of delay of an average of 21.1 seconds per vehicle. During the afternoon peak hour this same movement would show an improvement in Level of Service from "D" to "C" and a reduction in average vehicle delay per vehicle of 5.4 seconds. The new right turn movement would operate at Level of Service "B" and "A" during the weekday morning and weekday afternoon peak hours, respectively.

FREDERICK P. CLARK ASSOCIATES, INC.

PLANNING, TRANSPORTATION, ENVIRONMENT AND DEVELOPMENT RYE, NEW YORK FAIRFIELD, CONNECTICUT

Mayor Joseph Sack and Members of the Council Page 3 September 24, 2015

Table 1 provides a more detailed summary of the results of this analysis and the comparison noted above. The results of the analysis clearly indicate a benefit, with the construction of a separate right turn lane along the site's frontage to address current traffic congestion. Capacity analysis worksheets are included in the Appendix of this report.

2. Open Emergency Access Drive – This analysis assumes a conversion of the current emergency access only driveway from the subject property to Old Post Road to full-time use. To determine the appropriate shift of site traffic a new distribution pattern for site traffic was developed and graphically illustrated in Figure 1. Figures 2 and 3 show the redistribution of site traffic generation and assignment for the weekday morning and weekday afternoon peak hours, respectively. Figures 4 and 5 graphically illustrate the new combined traffic volumes for the weekday morning and weekday afternoon peak hours, respectively, with the new driveway.

The results of the analyses and comparison to a background condition indicate little or no benefit by permitting a second access drive to the site to Old Post Road. The nearby intersections would continue to operate at the same Levels of Service and essentially the same delay.

The development is expected to generate an insignificant level of additional traffic added to area roadways and; therefore, the results of the analysis, as presented in Table 2, indicates no measurable improvement. Capacity analysis worksheets for this condition are included in the Appendix of this report.

A second analysis was completed with the construction of the right turn lane noted above and with a provision to provide a second access drive to the subject property via the existing emergency access drive to Old Post Road. Results of the analysis at the Old Post Road/Playland Access Drive indicate any benefit is the result of the additional lane and not the second driveway. The approach would operate at a Level of Service "D," which represents an improvement from Level of Service "F" and a reduction in average vehicle delay of 22.0 seconds. During the afternoon peak hour the Level of Service would remain the same at "D" and with a minimal reduction of delay of 6.1 seconds.

FREDERICK P. CLARK ASSOCIATES, INC.

PLANNING, TRANSPORTATION, ENVIRONMENT AND DEVELOPMENT RYE, NEW YORK FAIRFIELD, CONNECTICUT

Mayor Joseph Sack and Members of the Council Page 4 September 24, 2015

The right turn lane would operate at Level of Service "B" and "A" during the weekday morning and weekday afternoon peak hours, respectively. This would indicate a significant improvement, with the right turn lane constructed. Table 3 provides a more detailed summary of the results of the analysis. The capacity analysis worksheets are included in the Appendix of this report.

3. Playland Parkway Ramp – This analysis assumes additional signing is provided on northbound Boston Post Road, with the modification of the existing off ramp to Playland Parkway to access Playland to permit a left turn movement from this ramp to access Playland Parkway and Interstate 95. As part of this analysis the right turn lane addition along the site frontage along Playland Access Drive is included.

To develop an assumption of a diversion of current traffic volumes, which is unrelated to site traffic from Boston Post Road from the south, an evaluation of current traffic volumes on Old Post Road at the intersection with Playland Access Drive and the Thruway Access Drive intersections was completed for both peak hours. This option could shift 106 and 62 vehicle trips traveling northbound on Boston Post Road from using Old Post Road to access the New York State Thruway Access Drive to this existing ramp to Playland Parkway during the two peak hours. See Figures 6 and 7.

An analysis of providing a left turn movement from the off-ramp from Boston Post Road to Playland Parkway was completed to determine the potential impacts to Old Post Road intersections. The results of this analysis indicate that during the weekday morning peak hour the southbound left turn movement from Playland Access Drive would improve from Level of Service "F" to "C" and result in an reduction in delay of 32.0 seconds. During the afternoon peak hour the same approach lane there will be improvement from Level of Service "D" to "C" and a decrease in average vehicle delay of 9.2 seconds. The right turn lane would operate at Level of Service "B" and "A" during the weekday morning and afternoon peak hours, respectively.

At the Old Post Road/Thruway Access Drive the eastbound left turn movement from Old Post Road to the Thruway ramp would improve from Level of Service

"B" to "A" during the weekday morning peak hour and remain at Level of Service "A" during the weekday afternoon peak hour. The left turn movement from the off-ramp from Playland Parkway at this location would improve from Level of Service "F" to "E" and reduction in delay of 63.9 seconds during the weekday morning peak hour and remain the same Level of Service "D" during the afternoon peak hour, with reduction in delay of 8.8 seconds. The results of this analysis indicate the greatest improvement in traffic flow and reduction in delay would occur during the weekday morning peak hour at both STOP sign controlled intersections on Old Post Road. Table 4 provides a more detailed summary of the results of this analysis. The capacity analysis worksheets are included in the Appendix of this report. Photographs of the intersection are included in the Appendix of this report.

At the Old Post Road/Thruway Access Drive there would be an improvement in reduction in delay from the ramp to Old Post Road with an improvement in Level of Service from "F" to "D" and a reduction in delay of 22.2 seconds during the weekday morning peak hour. During the afternoon peak hour the left turn movement from Playland Access Drive would operate at Level of Service "C" with a reduction in delay of 6.1 seconds.

Based on a field investigation and evaluation of the possible conversion of the off-ramp from Boston Post Road northbound to Playland Parkway both eastbound and westbound, a Speed Study was conducted of motorists traveling on Playland Parkway to determine the average speed and 85th percentile speed of motorists traveling to determine if adequate intersection sight distance (ISD) is currently available at this location. It was determined that the average speed of motorists traveling both eastbound and westbound on Playland Parkway at the location of the ramp noted above was 38 miles per hour. The 85th percentile speed of motorists traveling on this same section of Playland Parkway and used to determine if adequate ISD is available was found to be 44 and 46 miles per hour for eastbound and westbound movements, respectively.

Based on criteria followed by the Westchester County Department of Public Works, for the identified 85th percentile speed of motorists traveling on this section of Playland Parkway the desirable distance needed for a left turn from the

Synchro 8.0/HCM 2010 results is used for unsignalized capacity analysis.

Level of Service determining parameter is called the service measure.

TWSC = Two-Way STOP Control.

For TWSC Intersections: Level of Service/Average Control delay per vehicle (seconds/vehicle).

V/C ratio indicates the amount of congestion for each Movement. Any V/C ratio greater than or equal to one indicates that the Movement is operating at above capacity. Synchro 8.0 Macroscopic model is used for storage/queue analysis.

The Queue Length rows show the 95th percentile maximum queue length in vehicles. The Queue Length is for each lane. The total queue length is divided by the number of lanes and the lane utilization factor.

The 95th percentile queue is the maximum back of the queue with the 95th percentile traffic volumes.

Bolded 95th percentile queue exceeds the storage available.

Physical Units consist of the following:

1. Movement for TWSC Intersections.

SB = Southbound WB = Westbound R = Right Turn EB = Eastbound T = Through

NB = Northbound L = Left Turn

Frederick P. Clark Associates, Inc. 63760.004 120 Old Post Road, Ryel-Additional Analysis - 7-29-15/Scenario 4/Word Filesbype15-004 ste. doc 8/19/15

PLANNING, TRANSPORTATION, ENVIRONMENT AND DEVELOPMENT RYE, NEW YORK FAIRFIELD, CONNECTICUT

Mayor Joseph Sack and Members of the Council Page 6 September 24, 2015

ramp was found to be 512 feet and for a right turn movement the desirable ISD was determined to be 421 feet. Based on field observations the available ISD is well above the needed distance, with several hundred feet provided in both directions.

A further evaluation of the ramp layout and pavement width is needed to finalize lane arrangement. The ramp should be controlled with a STOP sign and lane description (right and left turns) and appropriate INTERSECTION WARNING signs should be installed on Playland Parkway.

The shifting of traffic in general from Old Post Road traveling to the Interstate 95 ramps via the Playland Parkway and shifted to Boston Post Road and directly to Playland Parkway would decrease traffic volumes on Old Post Road and improve overall operation with the intersections along Old Post Road. Results of the analysis show a benefit of providing this new connection to by-pass using Old Post Road. Table A-1 shows the results of the Speed Study on Playland Parkway. Table A-2 provides a summary of the ISD analysis, for reference purposes. Both tables are included in the Appendix of this report.

4. Installation of Traffic Signals on Old Post Road – This analysis was completed to determine the benefit of the installation of traffic signals at Old Post Road/Playland Access Drive intersection and a further benefit, if any, with the installation of a traffic signal at the Old Post Road Thruway Access Drive. Note that previous Studies indicated that these intersections did not meet traffic signal warrants.

Previous traffic signal warrant analyses conducted by our office for the previous proposal for a Hotel on the subject property indicated that warrants were not met for the unsignalized intersection of Old Post Road at Playland Access Drive. These analyses were conducted based on traffic volumes obtained in May 2012 for existing conditions and for a future condition, with the Hotel. In both cases the traffic signal warrants, which are required for an 8-hour period, were not met based on the Minimum Traffic Volumes (Warrant #1, Condition A) necessary or Interruption of Continuous Traffic (Warrant #1, Condition B) based on the minimum criteria for volumes at this intersection.

PLANNING, TRANSPORTATION, ENVIRONMENT AND DEVELOPMENT RYE, NEW YORK FAIRFIELD, CONNECTICUT

Mayor Joseph Sack and Members of the Council Page 7 September 24, 2015

It was found that for Warrant #1, Condition A, which is Minimum Traffic Volumes, Warrants were not met for any of the 8-hours since the hourly volumes on Old Post Road were too low for each of the 8-hours. For Warrant #1, Condition B, which is the Interruption of Traffic warrant, again the analysis results indicate that none of the 8-hours met the warrants. The two-way volume on Old Post Road is significantly below the minimum standard to consider a traffic signal control.

The analysis indicated that hourly traffic volumes were too low on Old Post Road and did not meet the minimum requirements for consideration.

Since the results of the warrant analyses indicate that not only the warrants are not met, but the warrants are not close to meeting the minimum criteria and ..it is very unlikely with any scenario for land use of the subject property, including the proposal for Senior Housing, or re-occupancy as an office building would indicate that volumes would increase to meet the criteria to install a traffic signal. See attached Tables 7 and 8 from the other report.

The criteria set forth in the Manual of Uniform Traffic Control Devices (MUTCD) 2009 is followed by the New York State Department of Transportation (NYSDOT), Westchester County Department of Public Works (WCDPW) and the City of Rye.

The previous warrants completed and referenced above and submitted to the City as part of the Traffic Study completed for the Hotel in 2012 are attached for reference purposes. Although a traffic signal warrant analysis was not completed for the Old Post Road/New York State Thruway Access Drive intersection it is likely the results would be very similar.

Notwithstanding the foregoing, the results of analysis further indicate that with traffic signals installed at both intersections noted above, both intersections would operate at Level of Service "C" or better during both the weekday morning and weekday afternoon peak hours and eliminate the current delays found on the Playland Access Drive southbound approach during the weekday afternoon peak hour. Installation of a traffic signal at the Old Post Road/Thruway Access Drive

PLANNING, TRANSPORTATION, ENVIRONMENT AND DEVELOPMENT RYE, NEW YORK FAIRFIELD, CONNECTICUT

Mayor Joseph Sack and Members of the Council Page 8 September 24, 2015

indicates a similar benefit of eliminating the Level of Service "F" on the off-ramp approach to the intersection and reducing delays significantly during the weekday morning peak hour. Table 5 provides the results. Worksheets are included.

Table 6 provides an analysis if a traffic signal was installed only at the Old Post Road/Playland Access Drive. Results of this analysis indicate it would operate at an overall Level of Service "B" during both peak hours and result in a similar benefit during the weekday morning peak hour.

The overall results of the analysis indicate that it would likely be beneficial to install both traffic signals so that they operate in a coordinated fashion and minimize delays on both side street approaches. Installation of traffic signals at both locations would also result in a benefit due to the limited sight distance when exiting the Thruway ramp and also minimizing the limited sight distance exiting Playland Access Drive at Old Post Road. Capacity analysis worksheets for each of these analyses are included in the Appendix of this report.

Findings

Although the existing condition of the property as a largely vacant office building is not contributing to the existing traffic patterns and the post-build condition would be an improvement over a fully tenanted office building, the results of these analyses, as described above, indicate the greatest benefit would be to provide the right turn lane along the site's frontage on Playland Access Drive. It results in an improvement in Levels of Service and reduction in delay during both the weekday morning and weekday afternoon peak hours.

The provision of providing a second driveway to the site directly to Old Post Road does not necessarily indicate a significant benefit and reduction in delay on area roads. This is due to the low site traffic generation as part of the redevelopment of the subject property.

Providing an alternative to motorists traveling northbound on Boston Post Road to access Playland Parkway, it would remove traffic from Old Post Road, with an improvement in Levels of Service and a reduction in delay at the STOP sign approach of Playland Access Drive to Old Post Road and the same at the Thruway Access Drive southbound approach

Notes:

Synchro 8.0 is used for traffic signal capacity analysis. Synchro 8.0/HCM 2010 results is used for unsignalized capacity analysis. Level of Service determining parameter is called the service measure.

TWSC = Two-Way STOP Control.

For TWSC Intersections: Level of Service/Average Control delay per vehicle (seconds/vehicle).

V/C ratio indicates the amount of congestion for each Movement. Any V/C ratio greater than or equal to one indicates that the Movement is operating at above capacity.

Synchro 8.0 Macroscopic model is used for storage/queue analysis.

The Queue Length rows show the 95th percentile maximum queue length in feet.

The Queue Length is for each lane. The total queue length is divided by the number of lanes and the lane utilization factor. The 95th percentile queue is the maximum back of the queue with the 95th percentile traffic volumes.

Bolded 95th percentile queue exceeds the storage available.

Physical Unix consist of the following:

I. Lane Group and Intersection Overall for Traffic Signal Controlled Intersections.

SB = Southbound WB = Westbound R = Right Turn $APP_{\cdot} = Approach$ EB = Eastbound T = Through NB = Northbound L = Left Turn

PLANNING, TRANSPORTATION, ENVIRONMENT AND DEVELOPMENT RYE, NEW YORK FAIRFIELD, CONNECTICUT

Mayor Joseph Sack and Members of the Council Page 9 September 24, 2015

to Old Post Road. Therefore, the provision of providing an alternative for commuters to access Playland Parkway and travel to the New York State Thruway would result in a benefit to overall traffic conditions along Old Post Road.

The analysis with traffic signal control indicate significant benefits and a reduction in delay at the STOP sign approaches.

Sincerely,

Michael A. Galante

Executive Vice President

Enclosure

July 30, 2015 VIA HAND DELIVERY

Mayor Joseph Sack and Members of the City Council 1051 Boston Post Road Rye, New York 10580

Re: Re-zoning of 120 Old Post Road

Dear Mayor Sack and Members of the City Council:

As you know, we represent Old Post Road Associates, LLC (the "Petitioner"), in connection with a Petition for Zone Change, Zoning Map Amendment and Amendment to City of Rye Zoning Ordinance (the "Petition") for the above referenced property (the "Subject Property"). We respectfully enclose supplemental materials and information for your review and consideration concerning the Petition as requested at the last City Council meeting.

At the last City Council meeting there were various recommendations of the Planning Commission that were discussed. Attached hereto as Exhibit 1 is a revised version of the Proposed Text Amendments to Chapter 197 reflecting some of those suggested revisions. The changes to the Proposed Text Amendments are as follows:

- §197-8.1.B(4) included a minimum landscaping buffer of 10 feet on the perimeter of the site
- §197-8.1.B(5) included a maximum building coverage of thirty-five percent (35%)
- §197-28 revised the parking requirements to provide a minimum of 1.5 spaces per dwelling unit
- §197-30.E included a provision allowing for tandem parking for multiple spaces reserved to a single dwelling unit
- Table 2 revised to include a minimum 50 foot setback for the shortest side yard and rear yard

HKP

We have also met with the City Planner and City Engineer to review potential traffic circulation improvements within the immediate vicinity of the Subject Property. While our review of these issues is ongoing, the Petitioner's traffic engineer anticipates being able to present at your upcoming meeting the potential benefits and impacts of the following concepts:

- The introduction of a right-turn only lane on Playland Access Drive onto Old Post Road immediately adjacent to and in front of the Subject Property;
- The utilization of the "emergency access" driveway from the Subject Property onto Old Post Road; and
- The creation of a left-turn onto Playland Parkway from the access ramp heading northbound on Boston Post Road which currently only permits eastbound access onto Playland Parkway and the diversion of traffic destined for I-95 to this entrance and off Old Post Road by way of new signage on northbound Boston Post Road.

At the last Council meeting there was also a question raised by a member of the public considering other alternative uses of the Subject Property and a potential subdivision with conventional single-family homes. If the Council were to consider re-zoning the Subject Property to a single-family zoning district the most logical zone would be the R-2 District which abuts the Subject Property to the south and east. The R-2 zoning district requires a minimum lot size of ½ acre; therefore, under a subdivision of the Subject Property there could potentially be 14 new single family residences. The Petitioner has not analyzed the impacts of such development as that is not the Petitioner's desired objective in the instant Petition and we do not believe the Council would find such a use desirable. We believe the contemplated use for multifamily age restricted housing is a more appropriate transition between the single-family residential development to the east to the office use to the west and multi-family / assisted living use of the Osborn to the south.

Finally, as requested by the City Council, the Petitioner has engaged a site contractor and geotechnical engineer to perform some preliminary subsurface investigations in order to understand the extent of the anticipated rock removal in order to construct the project. We do not yet have test results but will continue to provide that information to your Council upon completion of the testing.

HKP

We look forward to presenting this information to the City Council and addressing any comments or questions of the Council or the public. Thank you for your attention to this matter.

Very Truly Yours,

HARFENIST KRAUT & PERLSTEIN LLP

: Yorut

Jonathan D. Kraut

PROPOSED TEXT AMENDMENTS TO CHAPTER 197 OF RYE CITY CODE

§ 197-2 Districts

RA-6 Active Senior Residence District – Minimum area per family 2,000 square feet

§ 197-8.1 Active Senior Residence District Regulations

- A. Limitations on Occupancy.
 - (1) The occupancy of residential units within the Active Senior Residence Zone shall be limited to:
 - a) A single person 55 years of age or older;
 - b) Two or three persons, all of whom are 55 years of age or older;
 - c) A married couple, live-in companion, or partner, one of which is 55 years of age or older;
 - d) The surviving spouse of a person 55 years of age or older, provided that the surviving spouse was duly registered as a resident of the development at the time of the elderly person's death;
 - e) One adult 18 years of age or older residing with a person who is 55 years of age or older, provided that said adult is essential to the long-term care of the elderly person as certified by a physician duly licensed in New York State
 - (2) Persons under the age of 55 not specifically permitted to be occupants shall not be permitted to be permanent residents of dwelling units. For the purposes of this section, a "permanent resident" shall mean any person who resides within the dwelling for more than three consecutive weeks or in excess of 30 days in any calendar year, or has listed the residence as an abode for any purpose whatsoever, including, but not limited to, enrollment in public or private schools. Temporary occupancy by guests of families shall be permitted, provided that such occupancy does not exceed a total of 30 days in any calendar year.
 - (3) Notwithstanding the foregoing, one dwelling unit within the community may be set aside to be occupied by a superintendent or building manager, to which the limitations on occupancy set forth above shall not apply.
 - (4) The limitations on occupancy shall be included in the marketing materials for the development as well as within the rules and regulations or terms of any

leases, by-laws or covenants and restrictions for the development. Violations of the limitations on occupancy shall be enforceable by the City of Rye Building Inspector against the owner or lessee or the agent of any of them and shall be punishable by a fine of \$250 per day or by imprisonment not exceeding 15 days, or by both such fine and imprisonment. Exceptions to these regulations shall be granted if any limitations are determined to be in violation of any State or Federal law.

(5) The Planning Commission shall have the right to require that the owner execute agreements and covenants as it may deem to be required during any site plan approval process as it may reasonably deem to be required to ensure compliance with the stated intent of this section. Said agreements or covenants shall be recorded in the office of the Westchester County Clerk and constitute a covenant running with the land. Such covenant or agreement may be modified or released only as set forth in said covenant or agreement or by the City Council.

B. Site Development

- (1) At least eighty percent (80%) of the required parking for the development shall be provided in a covered parking structure within the basement level of the principal structure(s).
- (2) For any corner lot abutting Boston Post Road or Old Post Road, the front lot line of the lot shall be Boston Post Road or Old Post Road for purposes of the applicable front yard setback irrespective of building arrangement. The provisions of § 197-52 shall not apply to properties in the RA-6 zone.
- (3) The provisions of § 197-8.A & C shall not apply to properties in the RA-6 zone.
- (4) A landscaping buffer a minimum of ten (10) feet wide shall be required to be provided around the perimeter of the site.
- (5) A maximum building coverage of thirty-five percent (35%) shall be permitted.

§ 197-28 Schedule of Off-Street Parking Requirements

A. Schedule of parking requirements. Off-street automobile parking facilities shall be provided as follows:

Number of Spaces per Unit (by Parking District)

Use	A	В	C	Unit of Measurement and Conditions
Apartments for active seniors	1.5	1.5	1.5	Dwelling unit
located in RA-6 Districts				

§ 197-30 Layout and Location of Off-Street Parking Facilities

- D. In RA-1, RA-2, RA-3, RA-4, RA-5 and RA-6 Districts, no off-street parking facility accessory to apartments or office buildings shall be developed within five feet of any lot line. Required off-street parking facilities accessory to other main uses shall conform to the provisions of Subsection C above.
- E. Subject to the discretion of the Planning Commission during site plan review, in the RA-6 District tandem parking arrangements may be utilized for multiple spaces reserved to a single dwelling unit.

§ 197-44 Minimum Residential Floor Area

E. For dwelling units in apartments or other buildings containing three or more dwelling units in an RA-6 District, the minimum amount of residential floor area in each unit shall be 750 square feet for one bedroom units, 900 square feet for two bedroom units and 1,100 square feet for three bedroom units. Additionally, three-bedroom units must be equipped with at least 1 ½ bathrooms.

§ 197-86 Tables of Regulations

TABLE OF REGULATIONS: TABLE A RESIDENCE DISTRICTS – USE REGULATIONS Column 1 Permitted Main Uses

RA-6 Districts

(1) Apartments for active seniors. A detached residence for three or more families or housekeeping units, or a group of buildings housing three or more families on one lot, subject to the requirements of § 197-7 and § 197-8.1.

TABLE OF REGULATIONS: TABLE A RESIDENCE DISTRICTS – USE REGULATIONS

Column 2

Uses Permitted Subject to Additional
Standards and Requirements
(Subject to the requirements and provisions of §197-10)

RA-6 Districts

(Reserved)

TABLE OF REGULATIONS: TABLE A RESIDENCE DISTRICTS – USE REGULATIONS Column 3

Permitted Accessory Uses (Subject to the requirements and provisions of §197-9)

RA-6 Districts

- (1) Off-street parking facilities, subject to the requirements and provisions of § 197-8.1.
- (2) Other accessory uses or structures customarily incidental to any permitted main use, including active and passive recreational facilities (i.e. fitness center, pool, library, media room, storage areas, etc.) for the use of the residents of the principle structure. Outside storage on land of boats and boat trailers is prohibited.

(3) The filming of movies, commercials, documentaries, serials, shows, performances or other similar events and activities, including still photography, as regulated in RA-4 Districts.

RA-5	Apartments for senior citizens	1.00	1 AC	80	25		40	40		4	50	35%	10
	and handicapped persons												
RA-6	Apartments for active senior citizens	0.8	2,000	400	100	50	100	50		4	45	35%	10.

- (a) Equivalent to one (1) family in computing minimum lot sizes:
 - [1] Hotels and lodging houses, each two (2) guest sleeping rooms.
 - [2] Hospitals and similar institutions, each two (2) hospital beds.
 - [3] Medical offices, each two (2) doctors plus three (3) other employees.
 - [4] Other nonresidential main uses not specifically provided for in this Table of Regulations or elsewhere in Chapter 197, each one thousand five hundred (1,500) square feet of floor space
- (b) [1] Wherever a required yard abuts a street less than fifty (50) feet in width, the minimum yard dimension(s) shall be measured from a line of twenty-five (25) feet from parallel to the center line of said street.
 - [2] No building shall be nearer than one hundred (100) feet to center line of Post Road between Mamaroneck town line and Central Avenue.
- (c) For corner lots, corner side yards at least one fifth (1/5) of the lot width at the location of the building, but need not be more than front yard minimum, except as provided in \$197-62. Permitted nonresidential main uses shall have minimum side yard one and one half (1 1/2) times width specified for a single-family house (See \$197-52).
- (d) Twenty-five (25) feet for any side yard containing a driveway serving more than six (6) parking spaces. For a one-, two-, or three-family structure existing on effective date of Chapter 197 (August 9, 1956) and proposed for conversion for up to four (4) families, the Board of Appeals may reduce side yard requirement to eight (8) feet. For side yard requirements, see See § 197-54. For spacing between buildings on the same lot, see § 197-70. For the rear and side yards of apartment houses adjoining the right-of-way of a railroad, a parkway or a limited access highway, see § 197-64.
- (e) For usable open space requirement, see \$ 197-68
- (f) For buildings in variable height apartment groups (a use permitted in RA-4 Districts subject to additional standards and requirements), see§ 197-13. [g,h,i omitted]
- (j) See § 197-43.1 for floor area ratio reductions for single-family residences on oversized properties in one-family districts.

Referral Review

Pursuant to Section 239 L, M and N of the General Municipal Law and Section 277.61 of the County Administrative Code

Robert P. Astorino County Executive

County Planning Board

June 29, 2015

Christian K. Miller, City Planner Rye City Planning Department 1051 Boston Post Road Rye, NY 10580

Subject: Referral File No. RYC 15 - 001 - Old Post Road Associates, LLC
Petition for Zoning Text and Map Amendments

Dear Mr. Miller:

The Westchester County Planning Board has received a copy of a petition to amend the text of the City's Zoning Ordinance and to amend the City's Zoning Map so as to allow the redevelopment of an existing office site with a new age-restricted (age 55 and over) apartment building containing 135 one- and two-bedroom units and parking for 240 vehicles.

The 7.0-acre site is located at 120 Old Post Road (County Road 73) with additional frontage along the Playland Parkway Access Drive (County Road 147). The site is currently zoned B-4 and is developed with an office building, described as underutilized. The applicants are petitioning the City to create a new RA-6 Active Senior Residence District and to rezone the subject site to RA-6. If successful, the applicant would then seek site plan approval to develop the proposed apartment building under the new zoning. The site was previously proposed for redevelopment with a hotel.

Because the referred material does not include a site plan, we reserve comment on the potential development under the provisions of Section 239 L, M and N of the General Municipal Law and Section 277.61 of the County Administrative Code until plans are prepared and referred. We are able to offer the following preliminary comments:

1. <u>Affirmatively furthering fair housing</u>. The proposed zoning text amendment does not include provisions that would affirmatively further fair housing (AFFH) in the new RA-6 district. We recommend that this be added to ensure that no less than 10% of the total number of units developed would be set aside as affordable AFFH units. We also recommend that the affordable AFFH units be made available to people of all ages.

We note that the City of Rye has not adopted the County's *Model Ordinance Provisions* with respect to affordable AFFH. We encourage the City adopt these provisions to ensure that affordable AFFH units are constructed city-wide as part of all proposed developments.

Fax. (914) 995-9098

Website: westchestergov.com

Telephone: (914) 995-1400

2. Occupancy restrictions. The proposed RA-6 district regulations contain occupancy restrictions that go beyond the usual requirement that one resident in each housing unit be 55 years of age or older. The proposed regulations specify that all persons living in a dwelling unit be 55 years of age or older unless they are married to or are a "live-in companion, or partner" of someone who is 55 or older. Further, the proposed regulations state that any other resident younger than 55 must be at least 18 years of age and have a certification from a physician stating that "said adult is essential to the long-term care of the elderly person." The proposed zoning text also establishes fines and jail time for persons who violate these occupancy rules.

We suggest that the City exercise caution in adopting regulations that are more restrictive than those typically used for senior housing developments. We are unaware of any zoning regulations in place in the county that have restrictions and penalties similar to what is proposed by this applicant.

3. <u>County road</u>. Old Post Road (CR 73) and the Playland Parkway Access Drive (CR 147) are County roads. Because the site contains frontage on each of these roads, approval for work related to or with an impact on these roads will be required from the Westchester County Department of Public Works and Transportation (WCDPW&T) under Section 239 F of the General Municipal Law. Pertinent drainage, utility, erosion control and curb cut details need to be provided at the time of Section 239 F submittal. All driveways must be designed in accordance with current County, State and AASHTO standards.

Please note that WCDPW&T must be listed as an Involved Agency pursuant to SEQR.

Thank you for calling this matter to our attention.

Respectfully,

WESTCHESTER COUNTY PLANNING BOARD

CITY OF RYE Planning Commission

Memorandum

To: Rye City Council

From: Rye City Planning Commission

Date: May 5, 2015

Subject: Advisory Recommendation Regarding a Petition from Old Post Road

Associates, LLC to amend the City Zoning Code and Zoning Map to Change the Zoning Designation of a property at 120 Old Post Road from the B-4, Office Building, District to a New RA-6, *Active Senior*

Residence, District.

As requested, this memorandum provides a recommendation to the Rye City Council regarding the above-referenced matter.

Background

Last fall the applicant submitted to the City Council a petition to change the zoning district of a 7-acre property currently zoned B-4, *Office Building*, District at 120 Old Post Road to a new RA-6, *Active Senior Residence*, District. The petitioner submitted the zoning request in order to advance the construction of a 135-unit age restricted multifamily community. Consistent with City practice, the petition was referred to the Planning Commission for its advisory recommendation. The City Council also declared its intent to be Lead Agency for the environmental review of the application.

At five public meetings since February the Planning Commission has reviewed the petitioner's request and requested supplemental information. All information submitted to the Commission will be repacked into one complete submission to the City Council upon receipt of this memorandum. This memorandum was unanimously adopted by the Planning Commission at its May 5, 2015 meeting.

May 5, 2015 Page 2 of 7

Existing Permitted and Proposed Uses

The Commission supports the proposed age-restricted multi-family use based on current and anticipated office market trends, land use compatibility considerations and the balance of potential positive and negative impacts

Market Trends

The market analysis provided by the petitioner appears to support that there is demand for the age-restricted multi-family housing within the area. The analysis also affirms long-term historic and future challenges to office use.

The existing office building on the property has struggled to find tenants and has remained vacant for many years. The building age and configuration makes it difficult to re-adapt for multi-tenant users, which is how many former single-tenant buildings have been successful in reducing vacancy rates. While it appears that the office vacancy is relatively low in Rye, area market analysis suggests that office buildings continue their multi-year trend of high vacancy rates and flat or declining rents. There does not appear to be any demographic or economic factor on the horizon to reverse this downward trend. There is little new office construction in the region and other area communities such as Rye Brook and Harrison have amended their zoning codes to allow the reprogramming of existing or approved office space to other uses including multifamily residential, retail and private recreational uses. Age-restricted housing serves the growing needs of the aging baby boom generation, which is consistent with regional and national demographic trends.

The Commission notes that petitioner's characterization that the units would serve a "luxury" market (which is a relative term) cannot be guaranteed because zoning cannot legislate minimum rents or housing values. Actual rents could be higher or lower and housing tenure (i.e. rental vs. ownership) could also change and cannot be legislated in a zoning district.

Land Use Compatibility

The proposed age-restricted multi-family use is not incompatible with surrounding office, medical, institutional and single-family uses. The proposed zoning would create more opportunity for the creation of age-restricted housing and would add to the existing or approved 140 units of senior affordable housing in the nearby RA-5 Districts on Theall Road and Theodore Fremd Avenue. Land use compatibility concerns could be further alleviated by amending the proposed RA-6 District to include some or all of the Planning Commission's recommendations under the *Bulk and Density* section of this memorandum.

May 5, 2015 Page 3 of 7

In consideration of the petitioner's request, the City Council should contemplate whether other properties in the area may seek similar requests and whether a change in land use or amenities (such as improvements in the pedestrian network) may be necessary to support the growth in age-restricted housing within the area.

Consideration of Impacts

Potentially beneficial and detrimental impacts of the proposed use must be compared to those associated with the continuation of the existing office building. Office may have lower taxes than other uses, but it also generates relatively low municipal costs and no school-age children costs. On a per square-foot basis office generates higher traffic than the proposed use. Office generates less water, sewer and most other utility use than the proposed use. Office provides Rye residents with the potential to work in the City they reside in, but the proposed use offers an expansion of housing opportunities that the City may desire. The City Council needs to consider a comparison of these and other impacts associated with the maximum permitted development under existing and proposed zoning as it conducts its environmental review as Lead Agency under the State Environmental Quality Review (SEQR).

School-age Children

Age-restricted housing has no direct impact on school-age children costs and would likely provide an overall fiscal benefit to the City, County and School District budgets. The petitioner has provided a fiscal impact analysis in its submission. Much is noted that the age-restriction required by proposed zoning will not result in any direct impacts on school district costs because there will be no generation of school-age children.

The City should expect, however that there may be an indirect impact of the proposed development on school age generation based on the statements of need represented by the petitioner and its market study. Those indirect costs will be borne as Rye residents housing choices are expanded, which may induce movement in the housing migration cycle. Those households residing in existing single-family homes over age 55 and without children will have the opportunity to move to the petitioner's proposed development within the Rye community, which may be better suited to their housing needs. This type of housing choice is fairly limited in the City. As those single-family "empty nester" homes are sold they may go to households with children. Studies by the Rye City School District show that sellers of single-family homes typically have fewer children than buyers. Though challenging to quantify, this indirect impact on school-age children generation should be considered.

May 5, 2015 Page 4 of 7

It is acknowledged that this housing migration could occur independent of whether the petition is approved. For instance, if a similar housing product is offered in another nearby community this too could induce the sale of empty nester single-family homes in the City.

Fiscal Impact

The existing B-4 District on a 7.01-acre property is very limited in terms of the types and range of permitted uses that are both economically feasible for a property owner and fiscally beneficial to municipal and school district tax revenue. Other permitted uses available on this property include *public recreational uses*, *public uses*, *nursery schools* (not to exceed 30 children), agricultural uses, railroad passenger station and electric substations, religious uses, and residential care facility uses (limited to care of 10 or fewer disabled persons or persons in need of supervision or juvenile delinquents). Given these use restrictions of the existing zoning it's not surprising that the property owner is seeking changes from the City Council to amend the City Zoning Code.

The existing office building is vacant and therefore does not put significant demands on municipal or school district services. However, the vacancy position of the building has resulted in the property owner's successful reduction in property tax. This contributes to a destabilizing tax assessment position and when reductions are successfully secured it requires other tax payers, new revenue sources or service modifications to compensate for lost revenue. Continued vacancy of the office building may result in further future tax reductions.

The existing property pays approximately \$21,500 in City tax and \$80,300 in Rye City School District tax. The RA-6 District offers an opportunity to increase tax revenue and greater tax assessment stability. The petitioner has estimated that the age-restricted rental multi-family project currently under consideration could generate almost \$98,000 in City tax and \$365,000 in Rye City School District tax. The City Council should discuss the potential tax generation on this property and what restrictions might be implemented to prevent or limit future tax certioraris.

Traffic

Full development under the proposed zoning would generate less peak hour traffic than full office development permitted by existing Zoning.

Vehicle delays and traffic volumes can be high on some area roadways and intersections. Level of service is particularly poor at the Old Post Road/Playland Parkway Access Drive intersections. Interestingly, peak-hour vehicle trips and delays are generally less today than were shown in traffic studies conducted in 2009 and 2013. Certain turning movements have seen increases, which may be

May 5, 2015 Page 5 of 7

reduced with potential turning movement restrictions. A traffic signal at congested intersections does not appear to meet the required warrant analysis. There may be opportunities to make traffic improvements to address existing or anticipated traffic challenges.

Bulk and Density

The Commission notes concerns with the increase in overall development density of the proposed zoning as compared to the existing zoning. The proposed zoning would provided for a 166% increase in permitted floor area on the 7.01-acre property. It would also allow for a multi-family development density of 21.78 units per acre. The petitioner has provided a comparison of the unit density of the proposed zoning to other multi-family buildings in the City and similar age-restricted housing in the area In that analysis they note that Rye Manor on Theall Road has 53 units per acre, Highland Hall has 83 units per acre and Blind Brook Lodge has 51 units per acre. The recently approved 41 units of senior housing at 150 North Street/Theodore Fremd Avenue has 19.8 units per acre. The Commission is sensitive to concerns regarding the proposed bulk and scale of future development under the proposed district. To address these concerns the Commission recommends at a minimum the following adjustments in the proposed RA-6 District standards (see summary in Table 1 attached hereto).

Building/Lot Coverage

The existing B-4 District limits building coverage to 15%. There is no maximum lot coverage in the B-4 District so all at-grade parking is not included in the calculation. The Petitioner represents that the existing total impervious coverage on the property is 44%. Under the proposed RA-6 District there would be no building or lot coverage standard, but there would be a requirement that 80% of all required parking be located below grade in the basement. The Commission supports this requirement since it will reduce the over all lot coverage on the property. If a building coverage standard is desired by the City Council the applicant's current plan requires a building coverage of approximately 35%, which *includes* the portion of the court-yard building with basement parking.

Setbacks

The existing B-4 District requires a minimum building setback of 100 feet from all front, side and rear property lines. The proposed RA-6 District would reduce proposed building setbacks to as little as 25 feet for the rear yard and 40 feet for the side yard and the front yard along Playland Parkway Access Drive. Building height in both the existing and proposed districts would be 45 feet, however there would be a notable increase in overall development potential and an allowance for four stories (within 45 feet) rather than three stories in the B-4 District. Given these bulk increases the Commission recommends that no setback be less than

May 5, 2015 Page 6 of 7

50 feet and that perimeter landscape screening requirements be added to the proposed RA-6 District.

Bedroom Mix and Parking

The Commission recommends that the parking standard be increased from 1.25 spaces per unit rather than 1.5 spaces per unit and that development be limited to one- and two-bedroom units. A higher parking standard is necessary because it is likely that future development have assigned parking spaces, which means sharing of parking is not possible. Giving the nature of the use the Commission would not object to amending the proposed RA-6 District to allow tandem parking.

Attached hereto is a table that summarizes the Planning Commission's recommendations to assist the City Council's continued review of this matter.

Summary of Planning Commission Recommendations

Proposed RA-6, Active Senior Residence, District

Zoning Standard	Existing B-4 Office District*	Proposed RA-6 District**	Summary of Planning Comments and Recommendations
Permitted Use	Office	Age-Restricted Multi-Family	Proposed use is acceptable.
Max. Floor Area Ratio	0.3 (or 91,257 s.f.)	0.8 (or 243,936 s.f.)	Represents a 166% increase in maximum permitted development potential, however proposed use would be residential rather than existing office development and is considered acceptable if other recommendations provided below are implemented.
Max. Building Coverage	15%	No max.	A maximum building coverage standard of 35% would meet the project needs of the petitioner. Commission supports the proposed requirement that 80% of required parking be within a basement to reduce overall site coverage.
Min. Lot Area	7 Acre	0	No minimum lot area is proposed however a 2,000 square foot minimum lot area per unit (or 21.78 units per acre) is proposed, which could yield a maximum of 152 units on the property. Planning Commission recommends limiting the unit type to one- and two-bedroom units only.
Min. Lot Width	400 feet	400 feet	
Front Yard Setback	100 feet	100/40 feet	The front yard setback would only apply to the Post Road frontage. The setback from Playland Parkway Access Drive would be considered a side yard setback. The Commission recommends that this setback be increased to not less than 50 feet.
One Side Setback	100 feet	40 feet	Planning Commission recommends that this setback be increased to not less than 50 feet.
Total of Two Yards	200 feet	100 feet	Due to proposed reduction in setbacks and increase in permitted floor area the Planning Commission recommends a new landscape buffer standard.
Rear Yard Setback	100 feet	25 feet	Planning Commission recommends that this setback be increased to not less than 50 feet.
Max. Stories	3	4	Proposed standard is acceptable.
Max. Building Height	45 feet	45 feet	Proposed standard is acceptable.
Required Parking	7 spaces per 10 persons employed at one time.	1.25 spaces/unit	Planning Commission recommends a minimum parking requirement of 1.50 spaces per unit provided that unit type is limited to one- and two-bedroom units only. Tandem parking for residential units should also be allowed.
Min. Floor Area per Unit	N/A	1-BR: 750 s.f. 2-BR: 900 s.f. 3-BR: 1,100 s.f.	Planning Commission finds proposed standard acceptable noting that it meets or exceeds standards for multi-family units in the Zoning Code. Three bedrooms are not recommended.

^{*}Based on setback requirements for office buildings. Other uses permitted in the B-4 District generally have lesser standards and requirements.

** Based on standards included in applicant's March 4, 2015 submission.

Mayor Joseph Sack and Members of the City Council 1051 Boston Post Road Rye, New York 10580

Re: Re-zoning of 120 Old Post Road

Dear Mayor Sack and Members of the City Council:

We represent Old Post Road Associates, LLC (the "Petitioner"), in connection with a Petition for Zone Change, Zoning Map Amendment and Amendment to City of Rye Zoning Ordinance (the "Petition") in connection with the above referenced property (the "Subject Property"). The Petition was referred by you to the Planning Commission for a report and recommendation. The Petition contemplates creating a new zoning district within the City of Rye and re-zoning the Subject Property to an age-restricted (55+) multifamily housing zone (the "Project"). The Petitioner went through a series of meetings with the Planning Commission spanning several months and we understand the Planning Commission has issued a positive report and recommendation concerning the proposed zone change and proposed use of the Subject Property.

As the City Council may recall, the Subject Property is currently improved with a near fully vacant office building. The Petitioner has previously proposed repurposing the Subject Property with a hotel, which was met with large opposition by members of the community. After careful review of market conditions, the Petitioner believes the Project will provide a desirable housing alternative and product that is not currently available within the City of Rye. (See Market Feasibility Analysis attached hereto as Exhibit 7). Specifically, the Project contemplates the development of the Subject Property with an age-restricted luxury residential community for active adults.

The Project would also benefit the City of Rye as a whole by providing a housing alternative for those individuals 55 years and older who are not interested or in need of residing within a retirement community or nursing facility while not causing any increased burden on the expenses of the City of Rye School District due to the age-restricted residency requirements.

HKP

Simultaneously, if approved, the proposed real estate development would have a very beneficial impact on the property's market tax assessment – which has steadily decreased over the past years due to the erosion in market value of office use generally and the Subject Property specifically. (See Westchester County Office Market Report and Rye Office Market Analysis attached hereto as Exhibits 5 & 6). As set forth in the proposed fiscal impacts information attached hereto, the Project is anticipated to generate a significant increase in property taxes, without any burden on the School District due to the age restriction prohibiting occupancy by any school age children and a de minimis demand for other public services over the current use (See Proposed Property Tax Exposure attached hereto as Exhibit 8).

In addition, as further set forth in the attached reports, the Project would not have any significant adverse environmental or traffic impacts. As is described Traffic Impact and Impact Study, prepared by Frederick P. Clark Associates, Inc. (Exhibit 9), the Project "will result in a significant reduction in site traffic, with a decrease of 82 and 70 vehicle trip ends during the weekday morning and weekday afternoon peak hours, respectively." Moreover, as detailed in the Zoning, Land Use and Fiscal Impacts Memorandum prepared by Divney Tung Schwalbe, the Project will reduce impervious surfaces on the site by over 10%.

The Proposed Text Amendments have been modified slightly since the Petition was first submitted to the City Council reflecting some comments and clarifications requested by the Planning Commission. The Petitioner has included a requirement that at least eighty percent (80%) of the required off-street parking be provided in a covered parking structure within the basement of the proposed structure(s). The Proposed Text Amendments also include a maximum density of 2,000 square feet per unit. The Zoning, Land Use and Fiscal Impacts Memorandum (Exhibit 3) contains a density analysis and references other multi-family developments within the City of Rye as well as more recent projects in other municipalities for comparison.

In sum, we believe the proposed zoning change to permit a multi-family development is much more harmonious with the neighborhood than the existing office use, serving as a transition from the single family neighborhood on one side to the office districts on the other. We look forward to presenting this information to the City Council and addressing any comments or questions of the Council or the public. Thank you for your attention to this matter.

Very Truly Yours,

HARFENIST KRAUT & PERLSTEIN LLP

Janathan D. Krau

CITY OF RYE: RYE CITY COUNCIL COUNTY OF WESTCHESTER: STATE OF NEW YORK

In the Matter of the Application of

OLD POST ROAD ASSOCIATES, LLC

PETITION
FOR ZONE CHANGE,
ZONING MAP
AMENDMENT, AND
AMENDMENT TO
CITY OF RYE ZONING
ORDINANCE

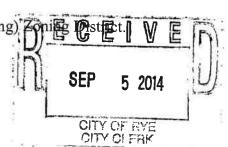

PROPERTY LOCATION: 120 Old Post Road, Rye, New York Sheet 146.13, Block 1, Lot 7

Petitioner, OLD POST ROAD ASSOCIATES, LLC, by its attorneys, Harfenist Kraut & Perlstein, LLP, hereby petitions the City Council of the City of Rye for a zone change, a zoning map amendment and an amendment to the City of Rye Zoning Ordinance as follows:

 Old Post Road Associates, LLC, (hereinafter "Petitioner"), with an address at 120 Old Post Road, Rye, New York 10580, is a Limited Liability Company duly formed and existing under the laws of the State of New York.

SUBJECT PROPERTY

- 2. The Petitioner is the owner of the subject premises located at 120 Old Post Road, as further set forth in the caption of this Petition (hereinafter the "Property").
- 3. The Property is a single parcel of approximately 7.0 acres located at the intersection of Old Post Road and Playland Access Drive which is known and designated on the Tax Assessment Map of the City of Rye as Sheet 146.13, Block 1, Lot 7.
- 4. The Property currently lies wholly within the B-4 (Office Building)

- 5. The Property is currently improved with a three story office building and related parking infrastructure.
- 6. The Property has the following uses adjacent to its boundaries: i) the Osborn senior living facility is immediately adjacent to the southwest; ii) single family residences in the R-2 zone are located to the southeast across Old Post Road; iii) Playland Parkway to the northeast; and iv) the WestMed Medical Group facility is located to the northwest.

ZONE CHANGE, ZONING MAP AMENDMENT AND AMENDMENT TO ZONING ORDINANCE

- 7. The Petitioner requests a change in the zoning of the Property, including a zoning map amendment and zoning ordinance text amendment of the Zoning Ordinance of the City of Rye, to rezone the Subject Property from B-4 (Office Building) to a new zone RA-6 (Active Senior Residence District) proposed herein. The Petitioner requests that the relief sought be granted and the zoning map and zoning ordinance of the City of Rye be amended to reflect the relief requested herein.
- 8. The Petitioner specifically requests that the official zoning map of the City of Rye be redrawn and amended to identify the Subject Premises known and designated on the Tax Assessment Map of the City of Rye, as Sheet 146.13, Block 1, Lot 7 as wholly within the RA-6 Zone as set forth hereinbelow.
- 9. The Petitioner also specifically requests that the Zoning Code of the City of Rye, Chapter 197: Zoning, Section 197-2: Districts, last amended 6-19-1991 by Local Law No. 13-1991, be further amended. Specifically, the Petitioners request that Section 197-2: Districts, A. Residence Districts, therein be amended to include a new residential district as follows:

RA-6: Active Senior Residence District – Minimum lot size area per family 2,000 square feet

- 10. Further, the Petitioner specifically requests that the Zoning Code of the City of Rye, Chapter 197: Zoning, Section 197-86: Tables of Regulations: Table A, be amended. Specifically, the Petitioners request that Section 197-86: Tables of Regulations: Table A, Residence Districts Use Regulations, Column 1: Permitted Main Uses, therein be amended to include as a permitted main use in the RA-6 district the following:
 - (1) Apartments for active seniors in an age-restricted development. A building or group of buildings housing three or more families on one lot, subject to the requirements of §197-7 and Table A.
- 11. The Petitioner also specifically requests that the Zoning Code of the City of Rye, Chapter 197: Zoning, be amended to include a new Section entitled Active Senior Residence District. Specifically, the Petitioners request that this new Section contain the particulars of the design parameters and limitations as set forth on Exhibit A attached hereto.
- 12. Lastly, the Petitioner specifically requests that the Zoning Code of the City of Rye, Chapter 197: Zoning, Section 197-86: Tables of Regulations: Table A, be amended. Specifically, the Petitioners request that Section 197-86: Tables of Regulations: Table A, Residence Districts Area Yard, Height and Miscellaneous Regulations, last amended 7-16-03 by Local Law No. 6-2003; be further amended. Specifically, the Petitioners request that a new row for the proposed RA-6 zone be added, an amendment be made to footnote "C" and a new footnote "K" be added to Table A, all as more specifically set forth on Exhibit B attached hereto.

FACTS SUPPORTING PETITIONER'S REQUEST

13. The existing office building at the Property has been largely vacant for a significant period of time. As this condition of high vacancy rates for office space is not isolated to the Property but is a macro-trend throughout Westchester and other metropolitan areas the Petitioner is not optimistic on the likelihood of the existing office building becoming reoccupied to a sustainable level. Accordingly, the Petitioner has explored various options for uses at the Property.

- 14. The Petitioner has noted that with property values continuing to increase in Rye, there is a shortage of independent living accommodations for active adults ages 55 and older who wish to remain in Rye but no longer have the necessity of maintaining the related costs and expense necessarily attendant to home ownership within the City of Rye.
- 15. The Petitioner believes that due to the unique location and size of the Property, the Property could accommodate a viable alternative for those older individuals seeking alternative housing arrangements in an age-restricted community that does not provide nursing care.
- 16. The requested amendments to the Zoning Ordinance would not have any adverse impacts on the City of Rye. If this Petition were granted it would not only allow the Property to be redeveloped and put back to a sustainable use, it would also provide an alternative housing opportunity that is not currently being offered within the City of Rye. The redevelopment of the Property would also provide a benefit to the City of Rye by reestablishing the taxable value of the Property for real property tax purposes, which has continued to erode year after year as the Property remains vacant. Furthermore, the redevelopment of the Property in accordance with the residency limitations proposed herein would not create any additional strain on the Rye City School District as the development would expressly prohibit residency of any school age children.

SEQRA REVIEW

17. With respect to the environmental procedure and review of this Petition pursuant to Article 8 of the Environmental Conservation Law of the State of New York and Part 617 of the New York Codes, Rules and Regulations promulgated pursuant to the New York State Environmental Quality Review Act, it is respectfully submitted that the requested zoning amendments are consistent with the long range planning goals of the City of Rye and would permit a harmonious use between the Property and the community at large.

18. Petitioner has reviewed all pertinent environmental issues relating to the proposed zone change and has prepared a short form Environmental Assessment Form (EAF) in connection with this application. It is submitted herewith, so as to enable the City Council to take steps necessary to consider, and to issue, a negative declaration pursuant to the New York State Environmental Quality Review Act.

WHEREFORE, it is respectfully requested that this matter be placed on the calendar of the City Council for a hearing and that the relief sought herein be in all respects granted.

Dated: Purchase, New York September 5, 2014

Respectfully submitted,

Jonathan D. Kraut

PROPOSED TEXT AMENDMENTS TO CHAPTER 197 OF RYE CITY CODE

§ 197-2 Districts

RA-6 Active Senior Residence District – Minimum area per family 2,000 square feet

§ 197-8.1 Active Senior Residence District Regulations

- A. Limitations on Occupancy.
 - (1) The occupancy of residential units within the Active Senior Residence Zone shall be limited to:
 - a) A single person 55 years of age or older;
 - b) Two or three persons, all of whom are 55 years of age or older;
 - c) A married couple, live-in companion, or partner, one of which is 55 years of age or older;
 - d) The surviving spouse of a person 55 years of age or older, provided that the surviving spouse was duly registered as a resident of the development at the time of the elderly person's death;
 - e) One adult 18 years of age or older residing with a person who is 55 years of age or older, provided that said adult is essential to the long-term care of the elderly person as certified by a physician duly licensed in New York State
 - (2) Persons under the age of 55 not specifically permitted to be occupants shall not be permitted to be permanent residents of dwelling units. For the purposes of this section, a "permanent resident" shall mean any person who resides within the dwelling for more than three consecutive weeks or in excess of 30 days in any calendar year, or has listed the residence as an abode for any purpose whatsoever, including, but not limited to, enrollment in public or private schools. Temporary occupancy by guests of families shall be permitted, provided that such occupancy does not exceed a total of 30 days in any calendar year.
 - (3) Notwithstanding the foregoing, one dwelling unit within the community may be set aside to be occupied by a superintendent or building manager, to which the limitations on occupancy set forth above shall not apply.
 - (4) The limitations on occupancy shall be included in the marketing materials for the development as well as within the rules and regulations or terms of any

leases, by-laws or covenants and restrictions for the development. Violations of the limitations on occupancy shall be enforceable by the City of Rye Building Inspector against the owner or lessee or the agent of any of them and shall be punishable by a fine of \$250 per day or by imprisonment not exceeding 15 days, or by both such fine and imprisonment. Exceptions to these regulations shall be granted if any limitations are determined to be in violation of any State or Federal law.

(5) The Planning Commission shall have the right to require that the owner execute agreements and covenants as it may deem to be required during any site plan approval process as it may reasonably deem to be required to ensure compliance with the stated intent of this section. Said agreements or covenants shall be recorded in the office of the Westchester County Clerk and constitute a covenant running with the land. Such covenant or agreement may be modified or released only as set forth in said covenant or agreement or by the City Council.

B. Site Development

- (1) At least eighty percent (80%) of the required parking for the development shall be provided in a covered parking structure within the basement level of the principal structure(s).
- (2) For any corner lot abutting Boston Post Road or Old Post Road, the front lot line of the lot shall be Boston Post Road or Old Post Road for purposes of the applicable front yard setback irrespective of building arrangement. The provisions of § 197-52 shall not apply to properties in the RA-6 zone.
- (3) The provisions of § 197-8.A & C shall not apply to properties in the RA-6 zone.

§ 197-28 Schedule of Off-Street Parking Requirements

A. Schedule of parking requirements. Off-street automobile parking facilities shall be provided as follows:

Number of Spaces per Unit (by Parking District)

Use A B C Unit of Measurement and Conditions
Apartments for active seniors 1.25 1.25 1.25 Dwelling unit
located in RA-6 Districts

§ 197-30 Layout and Location of Off-Street Parking Facilities

D. In RA-1, RA-2, RA-3, RA-4, RA-5 and RA-6 Districts, no off-street parking facility accessory to apartments or office buildings shall be developed within five feet of any lot line. Required off-street parking facilities accessory to other main uses shall conform to the provisions of Subsection C above.

§ 197-44 Minimum Residential Floor Area

E. For dwelling units in apartments or other buildings containing three or more dwelling units in an RA-6 District, the minimum amount of residential floor area in each unit shall be 750 square feet for one bedroom units, 900 square feet for two bedroom units and 1,100 square feet for three bedroom units. Additionally, three-bedroom units must be equipped with at least 1 ½ bathrooms.

TABLE OF REGULATIONS: TABLE A RESIDENCE DISTRICTS – USE REGULATIONS Column 1 Permitted Main Uses

RA-6 Districts

(1) Apartments for active seniors. A detached residence for three or more families or housekeeping units, or a group of buildings housing three or more families on one lot, subject to the requirements of § 197-7 and § 197-8.1.

TABLE OF REGULATIONS: TABLE A RESIDENCE DISTRICTS – USE REGULATIONS

Column 2

Uses Permitted Subject to Additional
Standards and Requirements
(Subject to the requirements and provisions of §197-10)

RA-6 Districts

(Reserved)

TABLE OF REGULATIONS: TABLE A RESIDENCE DISTRICTS – USE REGULATIONS

Column 3

Permitted Accessory Uses (Subject to the requirements and provisions of §197-9)

RA-6 Districts

- (1) Off-street parking facilities, subject to the requirements and provisions of § 197-8.1.
- (2) Other accessory uses or structures customarily incidental to any permitted main use, including active and passive recreational facilities (i.e. fitness center, pool, library, media room, storage areas, etc.) for the use of the residents of the principle structure. Outside storage on land of boats and boat trailers is prohibited.

(3) The filming of movies, commercials, documentaries, serials, shows, performances or other similar events and activities, including still photography, as regulated in RA-4 Districts.

MEMORANDUM

To:

City Council of the City of Rye

DATE:

June 3, 2015

FROM:

Gerhard M. Schwalbe, P.E.

RE:

120 Old Post Road

INTRODUCTION

Old Post Road Associates, LLC (the "Applicant") is seeking a zoning change, amendment to the City of Rye zoning map and amendment to the City of Rye Zoning Ordinance (the "Proposed Action" or "Action") to facilitate the redevelopment of 120 Old Post Road as an age-restricted multi-family residential community (the "Proposed Project" or "Project").

The subject property, located 120 Old Post Road (the "Project Site" or "Site"), is currently improved with an existing 75,000 square foot, 3-story office building, a parking lot for approximately 240 vehicles, and an entrance on Playland Access Drive. The existing building has remained mostly vacant and underutilized for over four years and, as documented below, current real estate market conditions suggest that re-occupancy with the existing office use is unlikely for the foreseeable future.

The Applicant proposes to replace the existing office building with a 245,000 square foot age-restricted, luxury residential building. The Project would consist of approximately 135 one and two bedroom units for residents aged 55 and older, along with underground parking, stormwater management facilities, landscape screening, and amenities typical of a luxury residential building. The driveway entrance would remain near its current location and provide access to Playland Access Drive. The existing emergency access driveway to Old Post Road would be retained for emergencies only. See Figure No. 1, *Illustrative Site Plan*.

This memorandum summarizes the land use and fiscal considerations that support the Proposed Action and Project. In addition, a full form NYS Environmental Assessment Form (EAF) is attached hereto for the Action, and an assessment of the potential environmental impacts and mitigation measures related to the Project is included, following the EAF.

OFFICE MARKET CONDITIONS

As set forth in greater detail in a report titled Rye Office Market Analysis prepared by Goman & York Property Advisors, LLC, dated March 2, 2015 ("Office Market Study"), vacancy rates for office buildings in southeastern Westchester County have steadily increased over the past decade and are currently at a 10-year high reducing the direct asking average rent. In addition, during this same time period operating costs have further increased, reducing net rent returns on office buildings in

Westchester County. Most current leasing activity in the market is a result of renewals or extensions and not a result of any positive change in market conditions. See, Office Market Study.

The following table summarizes the supply of office space within the City of Rye. The information contained in the chart below was obtained from the City of Rye Tax Assessment Cards. The property list is limited to other office buildings or facilities within the City of Rye and does not include mixed use structures along Purchase Street or elsewhere.

Table No. 1. Summary of Rye Office Space

Property	Lot Area (AC) 1	Floor Area (SF) 1	Rye Office Space (% of Floor Area)
2 Clinton Avenue	0.79	10,600	1%
14-16 Elm	0.26	19,600	2%
22 Elm	0.26	20,000	2%
150 Purchase Street	0.86	22,245	2%
31 Purchase Street	0.10	10,000	1%
600 Midland Avenue	7.83	30,000	3%
601 Midland Avenue	N/A	173,315	18%
2 Second Street	0.20	15,000	2%
16 School Street	1.61	18,316	2%
1 Theall Road	7	65,000	7%
350 Theodore Fremd Avenue	1.80	34,000	4%
401 Theodore Fremd Avenue	7	59,522	6%
411 Theodore Fremd Avenue	8.2	150,946	16%
555 Theodore Fremd Avenue	13.02	165,592	17%
511 Theodore Fremd Avenue	7.53	90,080	9%
120 Old Post Road	7.01	76,000	8%

Data obtained through City of Rye Tax Assessment Cards and confirmed with City of Rye GIS.

With increasing vacancy rates throughout the Rye area along with decreasing rents and the abundance of available office space, re-occupancy under existing market conditions appears highly challenging and doubtful. With regard to the Property, the existing structure is configured primarily as an open plan headquarters building. This configuration places the building in a highly uncompetitive market position since the majority of office leasing activity is focused upon smaller spaces. As a result of these market conditions and the continued vacancy of the building the tax assessment of the property has been reduced by over fifty percent (50%).

On some similar properties, the conversion costs have been determined to be prohibitive and the building has been torn down as a result. However, conversions of underutilized office space have occurred or are proposed on sites in the general vicinity of the Property. Examples include the development of LifeTime Fitness Center and a proposed residential development at 103-105 Corporate Park Drive in Harrison, as well as a recent application for a residential development at the Reckson Executive Park in Rye Brook. As set forth in greater detail in the attached Market Feasibility Analysis prepared by Goman & York Property Advisors, LLC, dated November 2014 ("Market Feasibility Analysis"), an age-restricted, luxury residential community is a viable repurposing of the Site and would offer a housing alternative that is not available within the City of Rye.

ZONING AND LAND USE CONDITIONS

Zoning

The Project Site contains 7.0 acres locaed north of Old Post Road and west of Playland Access Drive in the City of Rye. It is located within the B-4 office building zone, and is bordered by the R-3 residential district to the northeast, the R-2 residential district to the southeast and southwest, and the B-4 district extends to the north and west. See Figure No. 2, *Area Zoning Map*. In the project area, the R-4 and R-5 districts lie further to the south, with the RA-1 and RA-5 districts lying further to the north and southwest respectively.

The B-4 zone is designated as an "Office Building District" with a minimum area requirement of 7 acres. Permitted main uses in the B-4 zone are "Nonresidence main uses permitted in the R-2 Districts and as limited therein." However, there are no "nonresidence" main uses permitted in the R-2 district (i.e. the only permitted main use in the R-2 district are single family residences). Therefore, while there are special exception uses, in essence there are no permitted main uses allowed in the B-4 zone.

The uses permitted subject to additional standards and requirements (i.e. special permit uses) in the B-4 zone are:

- a) Office buildings
- b) Educational uses (requires a minimum of 10 acres)
- c) Public recreational uses
- d) Private recreational uses (requires a minimum of 7.5 acres)
- e) Extension of welfare uses (operated by nonprofits in existence or which had a permit before January 1, 1958)
- f) Public uses
- g) Nursery schools (not to exceed 30 children)
- h) Agricultural uses (i.e. nurseries, truck gardens, greenhouses and similar agricultural uses)
- i) Railroad passenger stations and electric substations
- i) Temporary real estate offices in connection with a subdivision containing 10 or more lots
- k) Religious headquarters offices (requires a minimum of 20 acres)
- l) Religious uses
- m) Residential care facility uses (limited to care of 10 or fewer disabled persons or persons in need of supervision or juvenile delinquents)

In sum, outside of the existing use of the Subject Property as an office building there are virtually no other permitted or special permit uses allowed in the B-4 zone for which the Site could be expected to yield a reasonable return.

The Proposed Action

The City currently permits multi-family residences in the following districts:

- 1. RT Two Family District
- 2. RA-1 Garden Apartment District

- 3. RA-2, 3, and 4 Apartment House Districts
- 4. RA-5 Apartment District for Senior Citizens and Handicapped Persons
- 5. RFWP Residential Floodplain and Wetlands Preservation

The RA-5 is the only district in Rye that currently restricts residential occupancy for senior citizens, and it is intended for housing developments that are undertaken by private nonprofit sponsors with public financial assistance. Therefore, its dimensional regulations are generally more permissive than the current standards for apartment buildings in other districts (e.g., a maximum height of 4 stories compared to 2.5, and a maximum F.A.R. of 1.0 compared to .40-.50). While the proposed agerestricted housing district would allow for less restrictive dimensional standards than most multi-family districts in the City, it would be more restrictive than the RA-5. See Table No. 2, Existing and Proposed Multi-Family Zoning Districts and Bulk Regulations, attached at the end of this memo.

The proposed dimensional and use regulations are generally consistent with similar districts across the region. See Table No. 3, *Bulk Characteristics of Regional Active Adult Zoning Districts*. The proposed yard dimensions and maximum building height would either be consistent with existing zoning or more restrictive than in comparable districts, requiring them to be greater than average. Alternatively, the proposed lot area and FAR would be less restrictive than in the comparable districts. However, these regulations would be offset by the Action's requirement for underground parking, which would minimize surface coverage and preserve open green space on the site. For example, as applied to the Project Site, these regulations maintain building and surface coverage rates that are below the minimum requirements for every comparable district at 22% and 33% of the site area respectively. By maintaining lower rates of surface coverage, it is the applicant's belief that this requirement will help preserve a desirable community character for both residents of the Proposed Project and its neighbors.

The proposed off-street parking provision of 1.25 spaces per dwelling unit is based on the supply ratio from the Institute of Transportation Engineers (ITE) *Parking Generation*, Land Use 252 – Senior Adult Housing, as well as characteristics of the Project's target market¹. While ITE rates indicate that a ratio of 1 space per dwelling unit is sufficient for residences with active seniors, the 0.25 fractional spaces would accommodate facility staff, visitors, or some residents who may wish to maintain more than one vehicle. These provisions are consistent with the comparable districts' range of .75 to 2 spaces per unit as indicated in Table 3.

It is the Applicant's opinion that these proposed standards are appropriate based on the district's age restriction, as it would permit housing for a sector of the population that would not create any additional strain on the Rye City School District.

Existing and Proposed Conditions

The existing office building on the Project Site is compliant with both use and bulk regulations in the B-4 Zoning District with potential for further as-of-right expansion. The following compares the Site's current dimensional characteristics to the limits of its existing zoning, and to the corresponding conditions in the Proposed Zoning and the Proposed Project. These characteristics are also illustrated in Table No. 4, 120 Old Post Road - Existing and Proposed Zoning Districts, Figure No. 3, Existing Zone

¹ Institute of Transportation Engineers, Parking Generation, 4th Edition, 2010

(B-4) Max. Build Out and Figure No. 4, Proposed Zone (RA-6) Max Build Out, attached at the end of this report.

Lot Area

As a nonresidential use, the existing B-4 zoning district requires a 7-acre minimum lot area, with which the Property is compliant at approximately 7.01 acres. The proposed use would be residential, and therefore lot area would be measured per family or equivalent rather than minimum acreage. The Proposed Zoning district would require 2,000 square feet of lot area per family, permitting a maximum of approximately 152 units.

Floor Area Ratio and Lot Coverage

As described below in Table No. 5, Floor Area Ratio and Lot Coverage, the existing building on the Property has approximately 75,000 square feet of floor area, and a Floor Area Ratio (FAR) of 0.25. Under these existing conditions, the site has approximately 25,000 square feet of building coverage and 240 parking spaces, for approximately 135,400 square feet of total lot coverage (approximately 44% of the lot area). Existing zoning permits a maximum FAR of 0.3, indicating the potential for as-of-right expansion of approximately 16,000 square feet of floor area. Under full build out conditions, there would be approximately 8,000 additional square feet of building coverage and approximately 105 additional parking spaces would be required, increasing the total lot coverage to approximately 58%.

The Proposed RA-6 Zoning District would permit an FAR of 0.8, or approximately 244,500 square feet of floor area on the Property. Therefore, full build out of the Property under Proposed Zoning would permit approximately 75,000 square feet of building coverage at maximum height, and underground parking would be required for a total lot coverage of approximately 108,600 square feet (approximately 36% of the lot area). This is the maximum FAR and coverage that would be permitted on the Property in the Proposed Action. Therefore, under Proposed Zoning, total site coverage would be reduced by approximately 27,000 square feet from what the existing zone permits. See Figure No. 5, Site Development Analysis – Impervious Coverage, attached at the end of this memo.

Table No. 5. Floor Area Ratio and Lot Coverage

	Maximum FAR	Maximum Floor Area	Building Coverage (SF / Percent of Lot Area)	Lot Coverage (SF / Percent of Lot Area)		
Existing Office Building – B-4	0.25	76,000 SF	28,000 / 9%	135,400 / 44%		
Potential Office Build-out – B-4	0.30	91,500 SF	36,600 / 12%	176,200 / 58%		
Proposed Zoning - RA-6	0.80	244,500 SF	75,300 / 25%	108,650 / 36%		

As described above, the increased FAR and building coverage under Proposed Zoning is offset by the requirement of underground parking, which preserves approximately two-thirds of the site as open green space, to be attractively landscaped and maintain the existing character of the community. As described below in the Surface Parking Alternative, if underground parking is not required by zoning, potential coverage rates would be more than double the rate in the Proposed Project. See Table No. 5, Floor Area Ratio and Lot Coverage.

Yard Dimensions

As described below in Table No. 6, *Minimum Yard Dimensions*, the existing office building meets the minimum yard dimensions for the front and one side yard at 100 feet each. The total of the two current side yards, however, is 300 feet, which exceeds the 200-foot minimum that is required. The current rear yard is approximately 290', also in excess the 100-foot minimum that is required. In short, existing zoning would permit building expansion into one side or the rear yard area.

Under Proposed Zoning, yard dimensions would either be maintained from the existing zone or adjusted to be greater than or equal to dimensions in the City's other multi-family districts, as described above. The front yard dimension would be maintained at 100 feet. One side yard would be 40 feet, and the total of the two side yards would be 100 feet. The rear yard, which abuts the parking area of a commercial property in the case of the Project Site, would be 25 feet. The yard dimensions in the Proposed Project would be generally more conservative than the minimum requirements permitted in the Proposed Action.

Table No. 6, Minimum Yard Dimensions

	Front Yard	One Side Yard	Total of Two Side Yards	Rear Yard
Existing Office Building (B-4)	100'	100'	300'	290°
Potential Office Build-out (B-4)	100'	100'	200°	100'
Proposed Zoning (RA-6)	100°	40°	100°	25'

Building Height

The existing building is 40 feet in height over three stories. Current zoning would maintain the three-story limit, but would permit a building 45 feet in height.

Proposed zoning would maintain the existing 45-foot height limit, with an increase from three to four stories. The increase in stories corresponds with the change in use, as typical residential buildings have a smaller distance between stories than office buildings. Although the Project Site does not contain steep slopes, there is a gradual but significant change in ground elevation from approximately 50 feet at the southeast corner to approximately 100 feet at the northwest. The Proposed Project has been designed to accommodate this topography with the average height being maintained as the elevation changes. See Figure No. 6, Building Height Diagram, Figure No. 7, Site Section Diagram, and Figure No. 8, Site Section Diagram – Proposed Building.

Multi-Family Housing Mass and Density Analysis

Table No. 7 below summarizes the building mass and density characteristics of comparable multi-family residence developments in the City of Rye. These sites are located in different zoning districts and may be subject to different permits or restrictions, but are intended to provide a point of comparison for the scales of mass and density that exist within the City's multi-family residence developments. Aerial and street-level imagery for each property is provided at the end of this memo.

The proposed development of the Project Site would be less intense from a bulk and density perspective than all but The Osborn.

Table No. 7, Summary of Comparable Properties in Rye

	Lot	Floor		12	Density	Height			Yard	Parking		
Property	Area (AC)	Area (SF)	FAR	Units	(Units/ Acre)	Feet	Stories	Front	Side	Rear	Spaces	Spaces/ Unit

Data obtained through City of Rye Site Plan Approval Records and confirmed with City of Rye GIS.

Below, Table No. 8 summarizes the building mass and density characteristics of comparable multifamily developments in other municipalities in the region. As noted in the table, these properties may have different classifications than the Proposed Project, but the figures below are for their residential components. Available imagery for each property is provided at the end of this memo. The proposed development of the Project Site is generally less intense from a bulk and density perspective then these other projects, except for The Ambassador which is an assisted living facility.

Table No. 8, Summary of Comparable Properties in Other Municipalities

	Lot Floor				Density	Height		Yard			Parking	
Property	Area (AC)	Area (SF)	FAR	Units	(Units/ Acre)	Feet	Stories	Front	Side	Rear	Spaces	Spaces/ Unit

³ Assisted living facility; Data obtained from Scarsdale Town Planner and As-Built Survey.

Surface Parking Alternative

The Applicant has contemplated an alternative plan in which surface level parking would be permitted in lieu of the requirement for structured, subterranean parking. See Figure No. 9, Surface Parking Alternative. With the same dimensional constraints that the Proposed Action would permit, this alternative would have an approximate FAR of 0.8, and building coverage of approximately 60,000 square feet. The surface parking area would cover approximately 118,000 square feet for total lot coverage of 178,000 square feet (58% of the total lot area). In order to provide parking spaces at the ratio required in the Proposed Action, the series of four-story buildings shown in Figure 9 would also require more permissive setbacks than the Action proposes.

Although surface parking would likely save construction costs, significant impacts to stormwater management and visual resources could be anticipated in this alternative. Potential lot coverage rates would be nearly double what the Proposed Action would permit, and this alternative would limit the Applicant's ability to provide a site-sensitive design with an attractive landscape plan and adequate stormwater management facilities. This alternative illustrates the crucial role that subterranean parking would play in the Proposed Action's ability to preserve open green space, maintain community character, and minimize lot coverage. In sum, the applicant believes that this alternative would lead to a less desirable outcome for residents of the Project and the neighboring community, and requiring underground parking will help to mitigate these impacts.

Land Use

The Project Site is bordered by Playland Access Drive to the northeast with access to Playland Parkway located at the Site's northeast corner. Old Post Road forms the southeast border with single family homes extending south and east of the Project Site, and to the north and east beyond Playland Parkway. The Site is also adjacent to The Osborn retirement community to the southwest, and WESTMED Medical Group's Rye office to the northwest. Additional office uses extend north and south of the Project Site, with additional multi-family residences to the southwest and north along Theall Road. In the larger context, the Project Site is located at the edge of an office district, with a variety of different land uses in the area which are generally characterized by single and multi-family residences, office buildings, institutional and public assembly spaces, cemeteries, public parks and parkway lands, nature preserves, and vacant land. See Figure No. 10, Area Land Use Map.

We believe the age-restricted luxury rental apartment building would provide an ideal transition between the residential community and office building district. It would also complement the scale and use characteristics of The Osborn as a multi-family residential community for senior citizens, while diversifying housing options in Rye specifically for active adults who do not require nursing care but no longer have the necessity of maintaining the costs of home ownership. See Figures 11, 12, and 13, Conceptual Renderings.

The City of Rye's Development Plan was adopted in 1985, and intended to guide land use decisions in the City through the year 2000². Although the Plan describes a "great pressure in Westchester County in recent years to build corporate office buildings [... which] has led to pressure from builders for the

² City of Rye, NY. City of Rye 1985 Development Plan. Adopted April 23, 1985.

rezoning of Rye land from residential to commercial," the Plan acknowledges that it "is not a static document to be followed without regard to changing conditions." As previously stated, such conditions in the office market have changed significantly since the Plan's adoption. However, the Proposed Action is consistent with the Plan's goals and policies related to residential development as follows:

II.1 Residential Development, Goal 4 – Provide an opportunity for the development of housing of various types, sizes, and costs to meet the needs of people at various stages in the life cycle, income, age levels, and household compositions, without compromising the integrity of Rye's single family residential areas.

Consistent with the Development Plan's goal, the Proposed Action would provide an opportunity for living accommodations in Rye in a way that is not currently regulated in the Zoning Ordinance. It would address what the Plan identifies as "an increasing need to provide housing for senior citizens who are no longer able to (or wish to) maintain a home," with a viable alternative for those older individuals seeking alternative housing arrangements who are able to remain active and independent.

Further, the Proposed Project's location near the office buildings and major roadways is identified in the plan as highly desirable for redevelopment with higher density multi-family residences. Located within the Post Road Residential/ Institutional Area, its vicinity was "envisioned as a mixed use area blending in with the surrounding residential areas. Permitted uses would be a variety of residential uses and densities." Therefore, it is expected that the project would enhance the integrity of the adjacent single family residential area by providing an added buffer of residential use between it and the office building district, with an aesthetic style that would complement the adjacent single family community as well as The Osborn.

FISCAL IMPACTS

Property Taxes

The Project Site is subject to real property taxation by the City or Rye, the Rye City School District, Westchester County, and special benefit assessments for Westchester County (e.g., sewer and solid waste special districts). The project site currently has a full market value for assessment purposes of \$7,492,146. The City's equalization rate is 1.91%, which results in an assessed value of \$143,100. The 2014 tax rates for the taxing jurisdictions are presented below in Table No. 9, 120 Old Post Road Current Tax Bill.

The Project Site is currently occupied by one office tenant. As indicated above, the property has an assessed value of \$143,000. The existing tax generation from the site is provided below in Table No. 9, below.

Table No. 9, 120 Old Post Road Current Tax Bill

						Equaliza	tion	Rate: 1.91%
	T	ax Rate		2014		2014		
	(pe	r \$1,000	M	larket Value		Assessed		Tax Bill
		value)		Valuation		Value		
City of Rye	\$	150.38	\$	7,492,146	\$	143,100	\$	21,519
Rye School District	\$	561.33		44			\$	80,327
Westchester County	\$	187.92					\$	26,891
Refuse Disposal District	\$	17.61		169		98	\$	2,519
Blind Brook Sewer	\$	29.68		**			\$	4,248
Total Tax Rate	\$	946.93	\$	7,492,146	\$	143,100	\$	135.504
(Rye School District)	\$	740.73	Φ	7,472,140	φ	143,100	Φ	133.304

2014 numbers were obtained from the Westchester County Government's published Property Tax Rates and 2014 City of Rye Adopted Tax Rate.

As further detailed in the attached Proposed Property Tax Exposure Report prepared by McCarthy Appraisal / Consulting Svc. Inc. dated January 9, 2014, the Project could be anticipated to have a future market value for assessment purposes of approximately \$34,000,000, resulting in an approximate assessed value of \$650,414. This would obviously be a marked increase over the existing tax base. The details of this increase on the tax roll are set forth in Table No. 10, below.

Table No. 10, 120 Old Post Road Anticipated Tax Bill based on 2014 Tax Rates

				Equalization	Ra	te: 1.91%
	1	Tax Rate 51,000 value)	Anticipated Iarket Value Valuation	nticipated essed Value		Approx. Fax Bill
City of Rye	\$	150.38	\$ 34,053,067	\$ 650,414	\$	97,809
Rye School District	\$	561.33	哥	-	\$	365,096
Westchester County	\$	187.92	**	(44)	\$	122,225
Refuse Disposal District	\$	17.61			\$	11,453
Blind Brook Sewer	\$	29.68			\$	19,310
Total Tax Rate (Rye School District)	\$	946.93	\$ 34,053,067	\$ 650,414	\$	615,896

2014 numbers were obtained from the Westchester County Government's published Property Tax Rates and 2014 City of Rye Adopted Tax Rate.

In total, the Project is anticipated to produce an increase of approximately \$480,000 in tax total tax revenue. Perhaps most significantly, as the Project will be an age-restricted residential community there will be no additional burden on the Rye City School District caused by the Project, while generating approximately \$280,000 in additional School Taxes.

Service Costs

The Subject Property is a located within the City of Rye, and is presently served by the Rye Police Department, Rye Fire Department, Rye Public Works, and the Port Chester-Rye-Rye Brook

Volunteer Ambulance Corps. The existing and potential fiscal impacts of community services for its current and proposed land use have been considered by analyzing the Property within the context of all properties in Rye that receive these services. Based on 2014 tax rates, the Property currently has a full market value of \$7.5 million, and an assessed value of \$143,100. As per the City of Rye Annual Budget adopted for 2014, the City's total assessed value was \$165,669,516. Therefore, the Property currently accounts for approximately 0.09% of the value of City property that is currently covered by the City's services. As indicated above with regard to property taxes, the Proposed Action would permit residential use on the Property, and the resulting project would have an anticipated assessed value of \$650,414. Based on the methodology above, the Project's anticipated portion of the City's assessed value would be 0.39%.

It is the applicant's opinion that this change in use for an existing developed property represents such a small portion of the overall property to be served, and therefore no significant adverse impacts would be anticipated for overall departmental operations or City budgeting. As per Tables 9 and 10 above, the Property's 2014 tax bill for the City of Rye taxes was \$21,519, and with the Proposed Project it would be approximately \$97,809. Table 11 below outlines the applicable service costs that could potentially increase from the existing to the proposed conditions, their portion of the 2014 Combined Operating budget, and how those same portions could be applied to the existing and proposed bills for City taxes.

Table No. 11, City of Rye Operating Budget, Services and 120 Old Post Road City Tax Bill

				Existing 7	Tax Bill	Proposed '	Tax Bill
Combined Operating Budget	\$ 5	50,371,169	100%	\$	21,519	\$	97,809
Police Services	\$	9,214,601	18%	\$	3,873	\$	17,606
Fire Department	\$	4,993,909	10%	\$	2,152	\$	9,781
Emergency Medical Services	\$	221,748	0.4%	\$	86	\$	391
Sanitation Services	\$	3,934,282	8%	\$	1,722	\$	7,824
Senior Adult Programs	\$	8,600	0.1%	\$	22	\$	98

It should be noted that some City services are generally supported as pay for use services, and as such would not increase the City budget. Based on information described in the 2014 City Budget, emergency medical services are provided by a contract service agency using their own facilities, equipment, supplies and staff, and are costs that are typically charged to the individual seeking services. In addition, senior adult programs are part of the City's culture and recreation services, and typically charge participants for various programs, realizing revenue that exceeds the Budget's allocated cost. Overall, even if minor costs were incurred as a result of the change in use of the property, the anticipated increased revenue from City taxes as described above would likely exceed these costs.

Police and EMS Service Calls

The following table summarizes calls made to the Rye Police Department from 2010 to 2013, from the Rye Manor apartments, located at 300 Theall Road in Rye. Rye Manor was selected for this analysis because it is the only other age-restricted multi-family residence development in Rye. As noted in the table, calls are categorized by their respective CFS codes, with the exception of calls classified as "other," which represents calls received in low volumes across various categories. Calls classified as

"other" include reports of missing persons, hit and run accidents, larceny, property damage, disorderly conduct, city code violations, illegally parked vehicles, flood conditions, unattended deaths, noise complaints, requests to assist other police departments, and hang-ups.

Table No. 12, Summary of Police Service Calls from 300 Theall Road

Other	6	10	6	5
Total Police Service Calls per Year	84	82	50	44

City of Rye Police Department, Incident Search Result Report for 300 Theall Rd, Rye NY, obtained from Rye City Planner.

CONCLUSION

As described above, the existing office building at the Property has been mostly vacant for a significant period of time. As this condition is not isolated to the Property but is a macro-trend throughout Westchester County and other metropolitan areas, re-occupancy by substantial office use would be highly challenging and unlikely.

The Proposed Action would not only allow the property to be redeveloped and put back to sustainable use, it would also provide a housing opportunity that is not currently being offered within the City of Rye and would further reestablish the taxable value of the Property for real property tax purposes, which has continued to erode as the property has remained vacant. Furthermore, the Proposed Project would not create any additional strain on the Rye City School District as the development would expressly prohibit school age children from residing in the development. Therefore, it is the Applicant's view that the Proposed Action and Project present a reasonable and logical alternative for the potentially valuable and underutilized Property while at the same time achieving the goal of providing a diverse housing stock within the City of Rye in a form that is not currently available.

- (a) Equivalent to one (1) family in computing minimum lot sizes:
 [1] Horek and lodging houses, each two (2) guest sleeping rooms.
 [2] Hospitals and similar institutions, each two (2) hospital beds.
 [3] Medical offices, each two (2) doctors plus three (3) other employees.
 [4] Other nonresidential main uses not specifically provided for in this Table of Regulations or elsewhere in Chapter 197, each one thousand five hundred (1,500) square feet of floor space (1,500).
- (b) [1] Wherever a required yard abuts a street less than fifty (50) feet in width, the minimum yard dimension(s) shall be measured from a line of twenty-five (25) feet from parallel to the center line of said street. [2] No building shall be nearer than one hundred (100) feet to center line of Post Road between Mamaroncek town line and Central Avenue.
- (c) For corner lots, corner side yards at least one fifth (1/5) of the lot width at the location of the building, but need not be more than front yard minimum, except as provided in § 197-62. Permitted nonresidential main uses shall have minimum side yard one and one half (1 1/2) times width specified for a single-family house (See § 197-52).
- (d) Twenty-five (25) feet for any side yard containing a driveway serving more than six (6) parking spaces. For a one-, two-, or three-family structure existing on effective date of Chapter 197 (August 9, 1956) and proposed for conversion for up to vards of apartment houses adjoining the right-of-way of a railroad, a parkway or a limited access highway, see § 197-64. four (4) families, the Board of Appeals may reduce side yard requirement to eight (8) feet. For side yard requirements for other apartments, see See § 197-54. For spacing between buildings on the same lot, see § 197-70. For the rear and side
- (e) For usable open space requirement, see § 197-68 (f) For buildings in variable height anothers. For buildings in variable height apartment groups (a use permitted in RA-4 Districts subject to additional standards and requirements), see 197-13.
- 9 [g,h,i omitted] See § 197-43.1 for floor area ratio reductions for single-family residences on oversized properties in one-family districts.

¹ City of Rye, Chapter 197 "Zoning," Att. 2

2 Based on § 197-28 "Schedule of off-street parking requirements," which provides 7 spaces per 10 people employed or intended to be employed in office buildings or other permitted uses in the B-4 District. Parking ratio for maximum build out conditions is estimated at 3.8/1000 SF

³ Potential build out conditions are estimated using existing conditions and are prorated by F.A.R. regulations.

⁴ Coverage calculations are based on the lot area of the Project Site, which is approximately 7.01 acres or 305,322 square feet.

Full Environmental Assessment Form Part 1 - Project and Setting

Instructions for Completing Part 1

Part 1 is to be completed by the applicant or project sponsor. Responses become part of the application for approval or funding, are subject to public review, and may be subject to further verification.

Complete Part 1 based on information currently available. If additional research or investigation would be needed to fully respond to any item, please answer as thoroughly as possible based on current information; indicate whether missing information does not exist, or is not reasonably available to the sponsor; and, when possible, generally describe work or studies which would be necessary to update or fully develop that information.

Applicants/sponsors must complete all items in Sections A & B. In Sections C, D & E, most items contain an initial question that must be answered either "Yes" or "No". If the answer to the initial question is "Yes", complete the sub-questions that follow. If the answer to the initial question is "No", proceed to the next question. Section F allows the project sponsor to identify and attach any additional information. Section G requires the name and signature of the project sponsor to verify that the information contained in Part 1 is accurate and complete.

A. Project and Sponsor Information.

Name of Action or Project: Rezoning of 120 Old Post Road		
Project Location (describe, and attach a general location map):		
120 Old Post Road, City of Rye, Westchester County		
Brief Description of Proposed Action (include purpose or need):		
Rezoning of the property at 120 Old Post Road for an age-restricted, multi-family resident	tial development.

	•Tons/year (short tons) of Sulfur Hexafluoride (SF ₆)	
	• Tons/year (short tons) of Carbon Dioxide equivalent of Hydroflourocarbons (HFCs)	
	Tons/year (short tons) of Hazardous Air Pollutants (HAPs)	

h. Will the proposed action generate or emit methane (including, but not limited to, sewage treatment plants, landfills, composting facilities)? If Yes:	□Yes ☑ No	
 i. Estimate methane generation in tons/year (metric): ii. Describe any methane capture, control or elimination measures included in project design (e.g., combustion to generate heat or electricity, flaring): 		
i. Will the proposed action result in the release of air pollutants from open-air operations or processes, such as quarry or landfill operations? If Yes: Describe operations and nature of emissions (e.g., diesel exhaust, rock particulates/dust):	□Yes Z No	
j. Will the proposed action result in a substantial increase in traffic above present levels or generate substantial new demand for transportation facilities or services? If Yes: i. When is the peak traffic expected (Check all that apply): ✓ Morning ☐ Evening ☐ Weekend ☐ Randomly between hours of to ii. For commercial activities only, projected number of semi-trailer truck trips/day: iii. Parking spaces: Existing 240	1 1 68 110	
 vi. Are public/private transportation service(s) or facilities available within ½ mile of the proposed site? vii Will the proposed action include access to public transportation or accommodations for use of hybrid, electric or other alternative fueled vehicles? viii. Will the proposed action include plans for pedestrian or bicycle accommodations for connections to existing pedestrian or bicycle routes? 		
 k. Will the proposed action (for commercial or industrial projects only) generate new or additional demand for energy? If Yes: i. Estimate annual electricity demand during operation of the proposed action: ii. Anticipated sources/suppliers of electricity for the project (e.g., on-site combustion, on-site renewable, via grid/other): 	☐Yes☐No	
iii. Will the proposed action require a new, or an upgrade to, an existing substation?	□Yes□No	
1. Hours of operation. Answer all items which apply. ii. During Operations: • Monday - Friday: • Monday - Friday: • Saturday: • Saturday: • Sunday: • Sunday: • Holidays: • Holidays:		

m. Will the proposed action produce noise that will exceed existing ambient noise levels during construction, operation, or both?If yes:	□Yes ZNo	
i. Provide details including sources, time of day and duration:		
 ii. Will proposed action remove existing natural barriers that could act as a noise barrier or screen? Describe: 	□Yes□No	
n Will the proposed action have outdoor lighting?	Z Yes □No	
If yes: i. Describe source(s), location(s), height of fixture(s), direction/aim, and proximity to nearest occupied structures: To be determined		
ii. Will proposed action remove existing natural barriers that could act as a light barrier or screen? Describe: Vegetation and Landscape Screening	✓ Yes □No	
o. Does the proposed action have the potential to produce odors for more than one hour per day? If Yes, describe possible sources, potential frequency and duration of odor emissions, and proximity to nearest occupied structures:	☐ Yes ☑No	
p. Will the proposed action include any bulk storage of petroleum (combined capacity of over 1,100 gallons) or chemical products 185 gallons in above ground storage or any amount in underground storage? If Yes: i. Product(s) to be stored ii. Volume(s) per unit time (e.g., month, year)	☐ Yes Z No	
iii. Generally describe proposed storage facilities: (e.g., month, year)		
 q. Will the proposed action (commercial, industrial and recreational projects only) use pesticides (i.e., herbicides, insecticides) during construction or operation? If Yes: i. Describe proposed treatment(s): 	☐ Yes ☑No	
ii. Will the proposed action use Integrated Pest Management Practices?	☐ Yes ☐No	
r. Will the proposed action (commercial or industrial projects only) involve or require the management or disposal of solid waste (excluding hazardous materials)? If Yes:	Yes No	
 i. Describe any solid waste(s) to be generated during construction or operation of the facility: Construction: tons per (unit of time) Operation: tons per (unit of time) ii. Describe any proposals for on-site minimization, recycling or reuse of materials to avoid disposal as solid waste: Construction: 		
Operation:		
iii. Proposed disposal methods/facilities for solid waste generated on-site:Construction:		
Operation:		

s. Does the proposed action include construction or mod	fication of a solid waste man	agement facility?	Yes 🛮 No
If Yes:			
i. Type of management or handling of waste proposed for the site (e.g., recycling or transfer station, composting, landfill, or			
other disposal activities):			
ii. Anticipated rate of disposal/processing:Tons/month, if transfer or other non-	combustion/thermal treatmen	it or	
• Tons/hour, if combustion or thermal	treatment	, 01	
t. Will proposed action at the site involve the commercia	years	go or disposal of hozardous	□Yes☑No
t. Will proposed action at the site involve the commercial waste?	generation, treatment, stora	ge, or disposar of hazardous	□ r e2 N 140
If Yes:			
i. Name(s) of all hazardous wastes or constituents to be	generated, handled or mana	ged at facility:	
ii, Generally describe processes or activities involving l			
iii. Specify amount to be handled or generatedt			
iv. Describe any proposals for on-site minimization, rec	veling or reuse of hazardous	constituents:	
proposals for all site transmission, see	,		
v_* Will any hazardous wastes be disposed at an existing			□Yes□No

SUMMARY OF POTENTIAL ENVIRONMENTAL IMPACTS

The following provides a brief evaluation of the potential environmental impacts of the proposed project to supplement the analysis of Zoning, Land Use, and Fiscal Impacts previously identified in this petition. In this case, the types of impacts often associated with a development proposal are limited since the project involves a previously developed site. In addition, the site is not constrained by wetlands or other regulated waterbodies, floodplains, significant steep slopes, or other identified sensitive natural resources:

Transportation

The results of the Traffic Analysis prepared by Frederick P. Clark Associates, attached herein, indicate that the Proposed Project will generate 27 and 34 vehicle trip ends during a typical weekday morning and weekday afternoon peak hour, respectively. For comparison purposes, the existing office building, if fully occupied with a variety of commercial tenants, could generate 109 and 104 vehicle trip ends during the same weekday morning and weekday afternoon peak hours, respectively. Therefore, the Proposed Project would result in a significant reduction in site traffic, with a decrease of 82 and 80 vehicle trip ends during the weekday morning and weekday afternoon peak periods, respectively.

The results of the analyses indicate that area roadways will continue to operate with essentially no change in Level of Service, except for an overall decrease in Level of Service at the signalized intersection of Theodore Fremd Avenue and Playland Access Drive. At this intersection, the Level of Service will change from "B" to "C" during the weekday and morning peak hour, resulting in an overall increase in average delay per vehicle of only 0.3 seconds, which is considered insignificant.

The results of these analyses and a comparison between a background and combined conditions indicate that traffic control and pavement markings at each of these intersections should remain unchanged as no modifications are necessary to accommodate this residential development. Based on these results, it is the applicant's opinion that no significant adverse impacts to transportation are expected.

Visual Resources

The Project would maintain the existing 100 foot buffer to Old Post Road, and further enhance local visual resources by providing subterranean parking within the proposed structure. This allows for the implementation of an attractive landscape plan and the preservation of many of the Site's existing mature trees. The Project also contemplates the development having a traditional architectural style that is typical of Rye, and a design which will complement the historic character of the adjacent Osborn property, serving as an appropriate visual transition from the adjacent single family neighborhoods to the adjacent office parks. See Figures 7, 8, and 9, Conceptual Renderings.

Air Quality and Noise

The Proposed Project will include below grade parking for the tenants and the loading area has been located toward Playland Access Road so as to minimize noise associated with vehicles and trucks. Similarly, air quality impacts should be lessened since there will be a significant reduction in site traffic.

Utilities

Water usage and sanitary discharge will increase from current land use approximately 16,250 and 14,775 gallons per day (gpd) respectively. It is not anticipated that this increase will have a significant impact on water and sanitary facilities since these values are conservative when compared to typical units with families. Actual usage is anticipated to be lower. All units will be equipped with low-flow fixtures. Further site specific review will be conducted during the Site Plan review process. Electric, gas, and communications also exist in the area to support the new project. The utility providers will be contacted once the land use zoning has been approved to identify connections and service modifications needed to support the Proposed Project. All existing utilities are anticipated to support the demand of the Proposed Project.

WESTCHESTER COUNTY OFFICE MARKET: SUMMARY DATA

Prepared for ALFRED WEISSMAN REAL ESTATE, LLC

NOVEMBER, 2014

Goman+York Property Advisors LLC was engaged by Alfred Weissman Real Estate LLC to review several issues related to the possible redevelopment of the property located at 120 Old Post Road in Rye, NY. Those issues include:

Impact of Current Market Conditions

- · Regional Trends in Local Office Market
 - o History and growth
 - Current supply and demand parameters
 - Current vacancy rates
 - Impact of current market/vacancies on market valuations and property taxes

Impact of Current Market Conditions

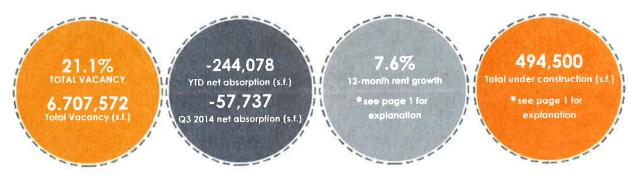

Office Market Trends

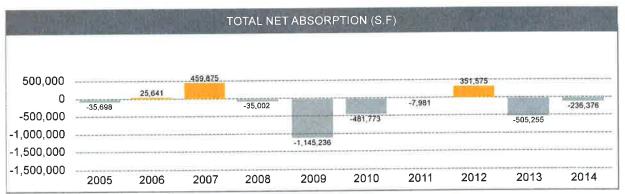

Vacancy rates for Westchester County historically have increased over the past 10 years, from a low of 15.2% in 2006 to its current high of 21.1% as of Q3 2014. In that same time period, direct asking average rent has decreased from \$27.50 per square foot in 2005 to its current low of \$25.65 per square foot. While rent growth over the last year has been 7.6%, this is due to significant renewal activity in the market and not any changes in the market conditions. It should be noted that operating costs have risen during that same period, pushing net rents on office properties even lower.

Since the 2008 recession, overall net absorption has been negative, only showing positive net absorption during 2012. Current availability has exceeded 5 million square feet and current absorption trends indicate that is yet to peak. 494,500 square feet of office space is currently under construction for Regeneron Pharmaceuticals and WestMed Medical Group. Both companies have been located within Westchester County and this is likely the result of obsolete office stock. We reviewed a variety of industry sources and all indicate vacancy rates are currently at a 10-year high.

Tax certiorari proceedings have increased in recent years by 10% to 86 in 2013 compared to 78 in 2013. Pressures from the courts to settle these cases has further impacted the value of commercial real estate in that potential buyers see it as a complicating factor to their business model and thus it serves as a disincentive to making investments in this asset class.

WESTCHESTER COUNTY OFFICE MARKET: SUMMARY DATA

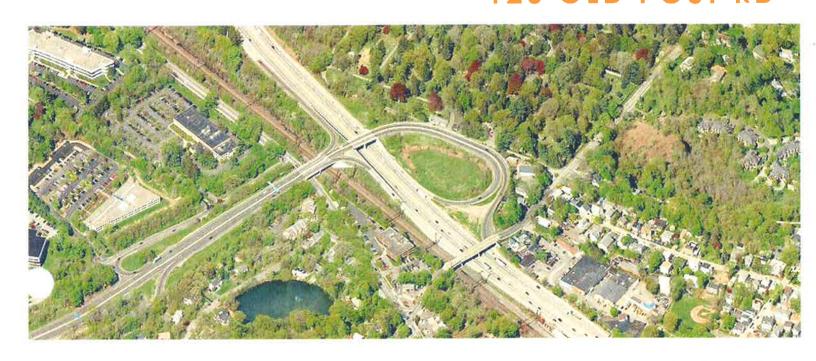

^{*}Data compiled from various industry sources

RYE OFFICE MARKET ANALYSIS 120 OLD POST RD

Prepared for ALFRED WEISSMAN REAL ESTATE, LLC March 2, 2015

Office Market Analysis - 120 Old Post Road, Rye, NY

Market Definition

The competitive office market for Rye, NY includes parts of southeastern Westchester County, southeastern White Plains, along with the southeastern I-287 corridor and the I-95 corridor.

The information contained in this analysis was taken from a variety of sources including regional market reports from the major commercial real estate brokerage houses along with data on commercial real estate activity from several real estate research and listing services.

Office Market Demand

While we have seen modest improvement in the national, regional and local economies and encouraging improvement in the unemployment rate during the past year, the demand for office space in the subject area continues to be very slow. In the portions of the market most relevant to Rye, the office vacancy rate continues to hover around 20% while the vacancy rate in the overall market area has continued to edge slightly higher in recent quarters.

Market Trends

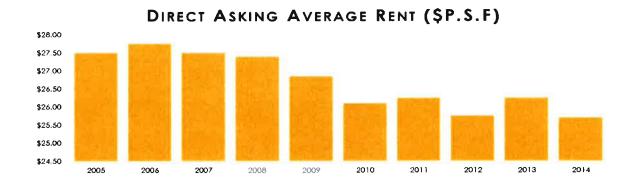

The trend of utilizing less square footage of space for each worker is one factor influencing the slow rate of leasing activity despite increasing employment. We expect this will continue to be of significant influence for an extended period of time, as many older buildings are adapted to the new layouts.

Office Market Analysis - 120 Old Post Road, Rye, NY

Much of the low level of office leasing activity has been in the medical, financial and business services sectors. Although not an unusually large amount of space, the lease to Acadia Realty Trust for approximately 30,000 square feet at 411 Theodore Fremd Avenue ranks as one largest transactions in the Westchester County market in Q4-2014, and the largest in the eastern submarket of Westchester County. While an important transaction, the fact that this is one of the largest deals done in the entire Westchester County market speaks to the continuing low level of activity.

Market Outlook

Each of the eastern sub-markets of Westchester County are currently showing reported vacancy of more than 1 million square feet of Class A office. Correspondingly, average asking rates have generally continued to decline slightly and are currently at their lowest reported level in the past 10 years. As expected, leasing velocity remains at record low levels. Non-CBD markets are particularly experiencing long term vacancy and low rental rates, and we don't expect improvement in this regard in the foreseeable future.

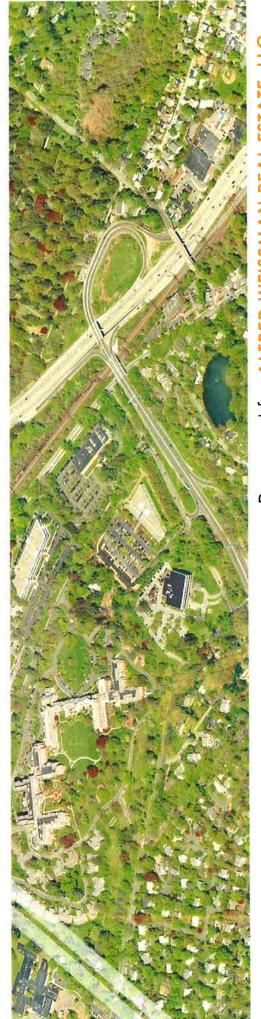

Office Market Analysis - 120 Old Post Road, Rye, NY

120 Old Post Rd

It should be noted that the subject property is configured primarily as an open plan headquarters building. This configuration places the building in a highly uncompetitive market position since the majority of office leasing activity is focused upon smaller spaces. The cost of reconfiguring the subject property will be significant as it will require major modifications to essentially all the existing mechanical, electrical and plumbing systems, as well as extensive redemising of the building to create competitive leasable spaces. In many similar cases involving similar headquarters buildings the conversion cost has been determined to be prohibitive and the building has eventually been torn down as a result. We know of numerous situations involving millions of square feet of 1980's vintage headquarters buildings where this has been the outcome.

GOMAN+YORK NOVEMBER, 2014

EXECUTIVE SUMMARY

The Assignment

Goman+York Property Advisors LLC was engaged by Alfred Weissman Real Estate LLC to provide a preliminary study examining the market capacity and the for-sale and for-rent parameters for the development of approximately 135 new senior (+55) independent living luxury housing units in Rye, New York.

The following report is a market feasibility analysis of the proposed senior (+55) housing project in Rye, New York based upon the conceptual design and project scope as provided by Alfred Weissman Real Estate LLC and Tecton Architects.

This analysis should be viewed as a macro level review of the market feasibility of the conceptual development plan. Essentially, this analysis is intended to provide information adequate to assist the developer in deciding whether further work on the given project is warranted. More specifically, the analysis assists the developer in making a "go or no go" decision before expending substantially more time and effort on the next level of detailed development tasks, including design development, cost estimating, geotechnical and environmental analysis, detailed financial projections and similar development related work.

It is important to point out that this analysis is not intended to provide the detailed information necessary for the purpose of formally underwriting debt or equity investment with respect to the given project.

The Project

The proposed project, as presented in the conceptual plans from Tecton Architects dated April 25, 2014, envisions a three-story independent living facility targeted at active adults (+55). The proposed design contains 135 luxury residential units and includes a variety of amenities such as a cafe/bistro, theater, study/game room, natatorium and fitness center along with locker rooms, multipurpose room and several courtyard areas. The overall facility is proposed to be approximately 245,000 square ft. with parking for 186 vehicles. The project site is located at the northwest corner of Old Post Road and Play Land Access Drive in Rye, New York.

GOMAN+YORK NOVEMBER, 2014

The Marke

provide a more accurate and realistic picture than, for example, concentric rings. Essentially, this is simply saying that the particular study area consists of those residents who We established 3 discrete study areas for the project based upon drive time parameters of 5, 13 and 23 minutes. In our experience, study areas based upon driving times live within the given drive time parameter from the project site.

neighborhood market for the project. We would expect the project to receive very significant consideration from potential buyers who currently reside within this study area, to attract some residents from outside that study area, the majority are likely to come from within it. The 5 minute drive time study area should be viewed as the immediate The 23 minute drive time study area should be viewed as the regional market (based on 2010 US DOT Federal Highway Administration Report) for the project. The average commute to work drive time for the US is approximately 23 minutes and we believe that it serves as a reasonable proxy for the largest study area. While the project is likely The 13 minute drive time study area simply bisects the other two study areas and provides an additional way to view the market for this project.

drive time trade area contains very high percentages of residents who are in the top socioeconomic segments in the US in terms of wealth, education and employment increases significantly along with the size of the study area. In summary, our analysis shows that the drive time trade area is ideally suited for the contemplated project. The data for the residents living within all 3 study areas shows that the market possesses exceptionally attractive socioeconomic indicators. In particular, the 5 minute status. While the socioeconomic characteristics decline somewhat as the trade area size increases, the overall market remains remarkably strong. Ethnic diversity

The Competitive Environment

competitive and which we believe are reflective of the tenant profile being sought for the project. Rental rates and multi-family unit values within the reviewed projects are We conducted a review of available rental and for sale housing within the applicable study area. Our review identified several projects which we consider to be directly high while vacancy rates are low, relative to the averages. These conditions are positive indicators for a proposed new entrant to the market.

Given the prominent position it occupies within this study area, we paid particular attention to The Osborn development adjacent to the planned project. Goman+York personnel confidentially "shopped" The Osborn to determine unit availability, pricing and occupancy. The very low vacancy at The Osborn, combined with their focus on providing a comprehensive service offering including meal plans and other services not being contemplated as part of the proposed project leads us to conclude that there will be limited overlap between potential tenants for The Osborn and the proposed project. In fact, we think it is more likely that these two projects will complement each other as apposed to competing with each other.

Conclusion

Based upon our review of the study area characteristics and the competitive environment, we believe that the market response to the contemplated project will be very positive We recommend that further and more specific market research and testing be done once the project plans have been more fully developed, unit designs/layouts and features have been detailed, specific amenities can be described and a professional marketing campaign, along with appropriate collateral materials, are available.

STUDY METHODOLOGY

that will allow Rye, NY to accurately plan for its future development. The Study prepared for Rye, NY provides an overview of the Active Adult (+55) Housing Market. The analysis will inform projections

Potential Market

The potential market for active senior housing derives from the pool of households, aged 55 and older, who move within the market area in a given year, and those who move to the area from other counties and even other states.

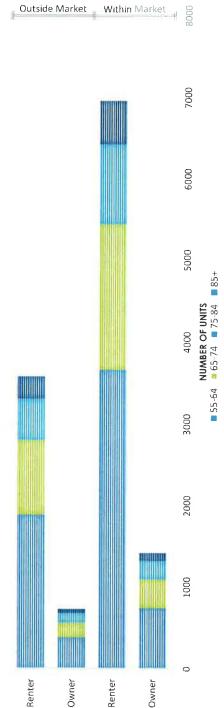

Mobility rates for seniors, who in-cou often prefer to age in place, used care much lower than for which younger households. Rates are, cohort however, higher for seniors who rent rather than own their own marke homes. To estimate the size of that for the potential market, national alreace

in-county mobility rates were used as a proxy for the rates at which seniors within various age cohorts are likely to relocate somewhere within the target market area. Table below shows that for seniors 55 and older already living within the 23-minute

radius of the proposed project, from which approximately 8,400 are likely to move in a given year based on 2010 Census data. More than 80% of those moving are expected to come from among the ranks of existing renters who are likely to prefer

rental units, as would many of those who might choose to downsize from homes they currently own.

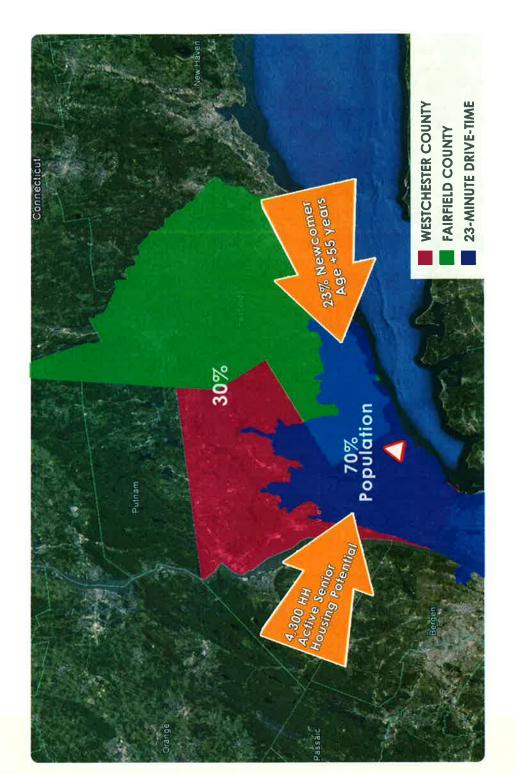

Population Migration

about 23% of the newcomers are year are potential candidates for Approximately 27,000 households migration patterns of households, moved into the two-county area according to the latest IRS data. of Westchester, NY and Fairfield, two-county population and will households that move into the 23-minute target market each market area were assumed to have characteristics that are share of the new households. The 23-minute target market presumably attract a similar Households moving into the CT between 2009 and 2010, Consequently, about 4,300 And reflecting the national similar to current residents. likely to be 55 and older. holds nearly 70% of the active senior housing. Combining the 8,400 senior households that move within the market area each year with 4,300 in from outside produces a potential market for active senior housing of 12,000 households or more. That is an average of approximately 1,000 households monthly. However, these estimates should be narrowed further to adjust for characteristics, such as target income and age ranges, that are in keeping with the design and scope of this

DEMOGRAPHIC & SOCIOECONOMIC CHARACTERISTICS

To get a grasp of the social elements that make up the community, we explored the Demographic and Socioeconomic characteristics of the study area.

Demographic

The target markets surrounding the proposed Rye, NY active senior housing project are predominantly white, well-educated, and wealthy.

The majority of residents in all three study areas are white, with shares in 2013 ranging from 84%, 73% and 55% within the 5, 13 and 23 minute drive-times, respectively. The larger markets exhibit more racial and ethnic diversity with the black share of the population growing from just 2% within the 5-minute range to 24% within the 23-minute range.

Similarly, residents of Hispanic origin make up 27% of the population within the 23-minute market area but only 12% of the market at the 5-minute mark. All three markets are expected to become more diverse, largely as a result of a growing Hispanic population.

Within a 23-minute drive time, the median age of area residents matches the US average in 2013 of 38.5 years, but in the two smaller markets residents tend to be older. Seniors 55 and older represented about 27% of the population in the

two larger markets—a figure that is likely to top 29% by 2018.

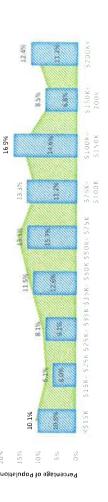

Housing is evenly divided between owner and renter occupied units at the 23-minute drive time from the Rye, NY center point. But within closer radii, owner occupied units are in the majority—58% at the 5-minute mark, 53% within a 13-minute drive time.

Owner-occupied housing is expected to represent a slightly larger share of all three markets by 2018.

INCOME DISTRIBUTION OF RYE - 23 MINUTE

2013 2018

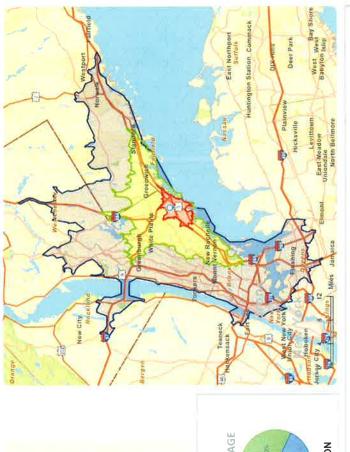

\$114,475

Education

Rye area residents are highly educated, with the share of the population 25 and older holding a Bachelor's degree or higher at 62%, 49% and 38% within a 5, 13 and 23-minute drive of Rye, respectively. The comparable US figure is just 32%. The employed population of the area works predominantly in the services sector and in white-collar occupations, earning exceptional levels of income.

figure.

Income Median household income within a 5-minute drive time of Rye exceeds \$114,000, more than double the US median. Incomes are lower in the two broader market areas—\$86,000 and \$63,000 in the 13-minute and 23-minute rings, respectively—but still above the comparable US

HOUSING OCCUPANCY

The target market is characterized by a relatively low vacancy rate, and a large share of renter-occupied as opposed to owner-occupied housing.

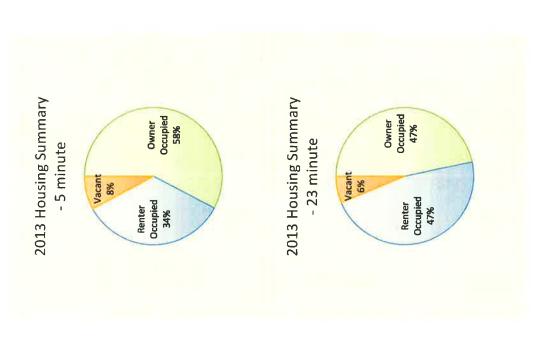

Vacancy Rates

Vacancy rates within 23-minutes of the subject property were 6.1%, according to 2010 Census data. That compares favorably to a U.S. average rate of 11.4% the same year, and to rates of 9.7%, 7.9% and 9.5%, respectively in the states of New York, Connecticut and New Jersey.

Current (2013) vacancy rates in the 23-minute radius have inched up a bit since 2010 (to 6.3%) but they remain lower in this larger market than in the more narrowly defined drive time markets where they are 7.9% within a 5-minute area and 7.5% within the 13-minute area. The housing market is expected to remain tight for the foreseeable future, with projected 2018 vacancy rates of 6.2% within the 23-minute drive time and 7.2% within the 13-minute market. Even an anticipated 9.0% vacancy rate for the 5-minute drive time market in 2018 compares favorably to current national and regional rates.

Rental Market Demand

The low vacancy rates in the local markets surrounding the proposed project are particularly noteworthy given the relatively high share of rental housing in the area. Within the 23-minute drive time market, housing is divided evenly between owner and rental occupied units at about 47% each. That represents a relatively large share of rental-occupied units which tend to have much higher vacancy rates than do owner-occupied units. Nationally, and in Connecticut and New Jersey, renter-occupied housing makes up 25% or less of the total number of housing units. New York's statewide renter occupancy rate is 37%.

COMPETITION ANALYSIS & PRICING - RENTAL

adjacent to Rye and properties in markets located same distance from Rye but which The Osborn in Rye, NY, 101 Park Place in Stamford, CT, Scarsdale Commons, Scarsdale, Our review included properties in Rye, as well as properties in markets immediately have similiar demographic and socioeconomic characteristics. With respect to properties located in Rye, we looked closely at four apartment complexes: NY and The Avalon Bronxville in Bronxville, NY all built since 2005.

Comparison

They range in size from 336 to 100 units and offer both 1-bedroom, 1-bathroom and 2-bedroom, 2-bathroom options (see table below).

All three complexes can be decribed as luxury properties, offering unit amenities that include parking, full kitchens, washer/dryers, and central air. Community amenities include fithess centers, clubrooms, and picnic/barbecue areas.

Pricing-Rental

The accompanying scatter plot shows the monthly rental prices and square footage for three competitive projects. The smaller units, each around 800 square feet, are all 1-bedroom, 1-bathrooms apartments; the larger units, each around 1,200 square feet, are all 2-bedroom, 2-bathroom units. Assuming area renters judge the amenities of the Rye project as significantly better than these apartments, an appropriate price for 1-bedroom units would be +/- \$2,800 and an appropriate price for 2-bedroom units would be +/- \$3,900.

COMPETITION ANALYSIS & PRICING- SALE

Local Property Records served as the comparison for potential market value.

Comparison

We examined similar for-sale condominium properties in a variety of markets in Rye, several markets which are immediately proximate to Rye, and additional markets located some distance from Rye but which have similar demographic and socioeconomic characteristics.

It should be noted that in looking at comparable properties, our focus was on well-located luxury residential properties having a high level of finish and extensive in-suite features, and which offer a significant list of common facilities and amenities.

Pricing- Sale

The accompanying charts show sale prices and square footage for luxury properties in similar markets. Assuming potential buyers judge the level of finish, features and amenities of the Rye project to be equal to or better than these properties, appropriate prices for 1 bedroom units would be about \$385,600 or \$482 per square foot, and for 2 bedroom units would be about \$522,000 or \$475 per square foot.

23-MINUTE DRIVE-TIME

PHASING AND IMPLEMENTATION

The analysis of senior migration patterns in the study area concluded that Only some of these households, however, are likely to match the income and age profile that would make living in an active senior community approximately 1,000 households could be in the market each month. either feasible or attractive.

Defining the Market

senior (55+) households in the area meet this income criterion. It is likely, therefore, that only 278 of the at least 40 times the monthly cost of housing.) According to current (2013) estimates, about 27.8% of with incomes of \$112,000 or more annually. (Industry rules-of-thumb suggest that income should be 1,000 monthly, house-hunting, senior households would pass the income test for the proposed Given the proposed pricing structure, the target market for the units should include seniors

However, active lifestyle arrangements are unlikely to appeal to the oldest senior cohort. And 16% of area seniors are 80 and older. Limiting the market to seniors between 55 and 79 reduces the target market of potential new tenants to about 233 per month.

Implementation

market. Extending the marketing time would reduce the necessary capture rate. Over a 180-day period, are expected to be occupied within 90 days, the project would have to capture just over 15% of the Assuming that all 135 of the proposed Rye units go on the market simultaneously and that the units intensive pre-marketing or unit discounting would improve the chances of capturing a 15% market for example, the Rye project would only have to capture less than 8% of the market. Alternatively, share within 90 days.

ONCIUSION - NOISITUMOU

Goman+York was asked to review the market feasibility of the proposed conversion of the subject property into a luxury, age-restricted (55+) residential development positioned at the upper end of the price spectrum. Our review included both rental and for-sale properties. The primary focus of our review was to assess the rents or sales prices which can be reasonably expected to be achieved if the redeveloped subject property is positioned at the upper end of the market.

A component of our work in this regard involved establishing several study areas based upon specific geographic parameters and subsequently conducting a review of residential projects having similar market positioning within those study areas. In broad terms, the study areas we established and examined included:

- a) the city of Rye,
 b) similar markets in close or immediate proximity to Rye, and,
- socioeconomic characteristics to those present in Rye but which are located some distance c) markets in the greater metropolitan New York City area having similar demographic and

The estimates of achievable rents and sales pricing contained in these conclusions are conditioned upon certain specific assumptions about the redeveloped property, including:

- that it is positioned as a luxury, age-restricted (55+) community,
- that an experienced firm with a successful track record with similar luxury projects be engaged to market the project,
- that individual units feature gourmet kitchens, luxury baths, and extensive entryway, trim, tile and general levels of finish
- the the proprty offers on-site amenities equal to or exceeding the best available at competitive luxury properties

redeveloped project can reasonably be expected to achieve pricing between \$480 and \$550 per square foot or approximately \$425,000 approximately \$3,900 to \$4,900 per month for a 2 bedroom. In the case of condominium units offered for sale, we conclude that the Based upon the entirety of our review, we conclude that the redeveloped project can reasonably be expected to achieve rents of between \$3.25 and \$3.75 per square foot per month or approximately \$2,800 to \$3,200 per month for a 1 bedroom and from to \$475,000 for a 1 bedroom and from approximately \$575,000 to \$715,000 for a 2 bedroom.

Data Note: N/A means not available.

2005-2009 ACS Estimate: The American Community Survey (ACS) replaces census sample data. Est is releasing the 2005-2009 ACS estimates, it Reverse principal data cellected monthly from January 1, 2005 through December 31, 2009. Although the ACS includes many of the subjects previously covered by the accornal census sample, there are significant differences between the two surveys including fundamental differences in survey design and residency rules.

Margin of arror (MOE): The MOE is a messure of the valiability of the estimate due to sempling enror. MOEs enable the data user to measure the inary of untershinty to seld settimate with a percent confidence. The range of uncertainty is called the confidence interval, and it is calculated by taking the estimate 4-7 the MOE. For example, if the AGS reports an estimate of 100 with an MOE of 4/-20, then you can be 90 percent certain the value for the whole propulation falls between 80 and 120.

Raliability: These symbols represent threshold values that EsrI has established from the Coefficients of Variation (CV) to designate the usability of the estimates. The CV measures the amount of sampling error relative to the size of the estimate, expressed as a percentage

- Lib Reliability: Small CVs (less than or equal to 12 percent) are flagged green to indicate that the sampling error is small relative to the estimate is reasonably reliable.
 - Medium Reliability: Estimates with CVs between 12 and 40 are flagged yellow—use with caution Low Reliability: Large CVs (over 40 percent) are flagged red to indicate that the sampling error is large relative to the estimate. The estimate is considered very unreliable.

2005-2009 ACS Estimate: The American Community Survey (ACS) replaces census sample data. Est is releasing the 2005-2009 ACS estimates, five-year period date collected monthly from lanuary 1, 2005 through December 31, 2009. Although the ACS includes many of the subjects previously covered by the december 10 and the survey including fundamental differences in survey design and resteem to the surveys including fundamental differences in survey design and resteemty miles.

Mergin of error (MOE); The MOE is a measure of the variability of the estimate due to sampling error. MOEs enable the data user to measure the inning of uncertainty for each estimate with operent confidence. The lange of uncertainty is called the confidence interval, and it is calculated by taking the estimate 4-7 the MOE. For example, if the ACS reports an extinned of 100 with an MOE of 4-7. 20, then you can be 90 percent certain the value for the whole population falls between 80 and 120.

Reliability: These symbols represent threshold values that Esr1 has established from the Coefficients of Variation (CV) to designate the usability of the estimates. The CV measures the amount of sampling error relative to the size of the estimate, expressed as a percentage.

- Min Reliability: Small CVs (less than or equal to 12 percent) are flagged green to indicate that the sampling error is small relative to the estimate and the estimate is reasonably reliable.
 - Medium Reliability: Estimates with CVs between 12 and 40 are flagged yellow—use with caution.
- Low Reliability: Large CVs (over 40 percent) are flagged red to indicate that the sampling error is large relative to the estimate. The estimate is considered very unfoliable.

Saurce: U.S. Census Bursau, 2005-2009 American Community Survey

Reliability: 🍱 nigh 🗓 medium 🔋 low

RE: 120 Old Post Road, Rye, NY

Potential development - Proposed Property Tax Exposure

Dear Mr. Weissman:

As per your request through my conversations with your attorney, Jonathan Kraut, I am respectfully enclosing this report on the potential tax exposure on the proposed development plan located at above noted address. The documentation enclosed, illustrates both the current property taxes and an analysis for the proposed development. As you will see, there is a substantial increase in taxes from the current use. This analysis is based on the required methodology for apartments/condominiums and cooperatives in the New York State Real Property Tax Law.

The analysis and potential tax exposure is based on information received to date and based on the project reaching stabilization. We based our analysis on the following information, and if current proposal changes throughout the approval process, the valuation may change as well.

> 46 1 Bedroom with 1,215 square feet 89 2 Bedroom with 1,395 square feet There will be 1.25 parking for each unit which will be included in the rental rates.

As can be seen from the enclosed, the rental income was established by gathering information from the most comparable properties in the market place. As this will be a new complex with several amenities, the market rental rates are assumed to be higher than typical within the City of Rye. However, they are included in the report for reference. Therefore we expanded our search to newer developed apartment complexes. The expenses, and capitalization rate were also derived from the market and reliable real estate publications. I will be happy to discuss this with you in further detail if necessary.

Sincerely

Edye McCarthy Commercial Real Estate Appraiser/Consultant

Mr. Alfred Weissman Mr. Alan Weissman Alfred Weissman Real Estate, Inc. 120 Old Post Road Rye, New York 10580

Gentlemen:

As requested, we have completed this Traffic Study for the proposed development of the subject property located at 120 Old Post Road in Rye, New York. The proposal is to demolish the existing, but mostly vacant office building comprising 70,000 square feet and construct a 135-unit residential, age-restricted, development. Access will remain to Playland Access Drive, essentially at the same location, and immediately south of the unsignalized intersection with Old Post Road.

The results of this Traffic Analysis indicate a development of this type and size will generate 27 and 34 vehicle trip ends during a typical weekday morning and weekday afternoon peak hour, respectively. This is based on trip generation rates provided by the Institute of Transportation Engineers (ITE). For comparison purposes, the existing office building, if fully occupied with a variety of commercial tenants, could generate 109 and 104 vehicle trip ends during the same weekday morning and weekday afternoon peak hours, respectively. Therefore, the redevelopment of the subject property as a residential development will result in a significant reduction in site traffic, with a decrease of 82 and 70 vehicle trip ends during the weekday morning and weekday afternoon peak hours, respectively.

The results of the analyses indicate that area roadways, although certain roadways approaches to intersections experience short-term delays during peak hours, each location will continue to operate with no change in Level of Service, except for an overall decrease in Level of Service at the signalized intersection of Theodore Fremd Avenue and Playland Access Drive from "B" to "C" during the weekday morning peak hour. However, this change in Level of Service will result in an overall increase in average vehicle delay per vehicle of only 0.3 seconds, which is considered insignificant. The results of

PLANNING, TRANSPORTATION, ENVIRONMENT AND DEVELOPMENT RYE, NEW YORK FAIRFIELD, CONNECTICUT

Mr. Alfred Weissman Mr. Alan Weissman Page 2 November 25, 2014

these analyses and a comparison between a background and combined conditions, which includes the proposed residential development, indicate that traffic control and pavement markings at each of these intersections should remain unchanged as no modifications are necessary to accommodate this residential development. Any approach with a Level of Service "F" will have a maximum increase in average delay of 7.2 seconds, which occurs during the morning peak hour.

This Traffic Study incorporates traffic related to a proposed residential development to be located on Theodore Fremd Avenue and potential development to be generated by Playland in the future.

Sincerely,

Michael A. Galante

Executive Vice President

SUMMARY

The purpose of this Traffic Report is to provide the City of Rye with a detailed analysis of potential impacts from this proposed development on adjacent roadways and nearby intersections in the designated Study Area. The proposal is to demolish the existing, but mostly vacant, office building comprising 70,000 square feet of space and construct an age-restricted residential development which will have 135 units. Access will remain the same from Playland Access Drive to the immediate south of the Old Post Road STOP sign-controlled intersection.

The Traffic Study is based on traffic volumes obtained in 2012 through 2014. These volumes were obtained by Frederick P. Clark Associates, Inc. and other Traffic Consultants for different nearby projects.

In this Traffic Study it addresses traffic conditions for existing, no-build and build peak hour volumes near the site. It includes the weekday morning and weekday afternoon peak hours. Under the no-build condition it includes other developments, as well as an appropriate growth rate.

The proposal is to demolish the existing, but mostly vacant, office building and construct the age-restricted development, as noted above. To estimate site traffic for the proposed development trip generation rates were obtained from the Institute of Transportation Engineers (ITE) in "Trip Generation," 9th Edition, published 2012. Based on these trip generation rates it is estimated a development of this type and size will generate 27 and 34 vehicle trip ends during the typical weekday morning and weekday afternoon peak hours, respectively. For comparison purposes the current 70,000 square-foot office building, if it was to be fully reoccupied, could generate 109 and 104 vehicle trip ends during the same weekday morning and weekday afternoon peak hours, respectively. Therefore, the proposed residential development would result in a decrease

in site traffic generation of 82 and 70 vehicle trip ends during the weekday morning and weekday afternoon peak hours, respectively. This is a significant reduction in site traffic generation potential directly related to the change in land use from an office building to a residential development.

The results of the capacity analysis for existing conditions indicate the Theodore Fremd Avenue/Playland Access Drive signalized intersections operates at an acceptable overall Level of Service "B" during peak hours. During the weekday morning peak hour motorists experience delays at the unsignalized intersection of Playland Access Drive /Playland Parkway/Medical Building, Old Post Road at Playland Access Drive and Old Post Road at Thruway Access Drive. All of the Study Area intersections operate at acceptable Levels of Service during the weekday afternoon peak hour. Similar results are found for 2016 background conditions. In both existing and background conditions analyses the office building located on the site is considered vacant.

Under a future combined condition, which includes the proposed residential development, each of these unsignalized intersections will continue to operate at acceptable Levels of Service, except for some Levels of Service "E" or "F" identified in a background condition. A comparison of the background and combined traffic conditions for each of these intersections indicate that Levels of Service will remain unchanged, except for change from an overall Level of Service "B" to "C" at the signalized intersection of Theodore Fremd Avenue at Playland Access Drive, with an insignificant overall delay due to the residential development of 0.3 seconds per vehicle during this one peak hour. Results of the analyses for the weekday afternoon peak hour indicate Levels of Service will remain the same at each of the unsignalized intersections and at each of the lane groups or approaches with minimal, if any, increase in average vehicle delay due to the proposed residential development.

Based on the results of these analyses it is recommended that the current traffic control and pavement markings at each of these locations remain unchanged. The analysis indicates that the added site traffic for a residential development is insignificant and will not change the overall operation of any of the intersections in the Study Area. In addition, there is a significant benefit of converting this office building to a residential development, which results in a significant decrease in site traffic generation during the key weekday morning and weekday afternoon peak hours.

The results of these analyses have been compared to field observations at each of these locations during both the weekday morning and weekday afternoon peak hours. It is noted that motorists do experience short-term delays at the Playland Parkway off ramp to Playland Access Drive and on the Playland Access Drive and Thruway Access Drive approaches to Old Post Road during peak hours. However, based on the results of this analysis each intersection should maintain STOP control. Any consideration for signalization, if warranted, at the Playland Parkway ramps to Playland Access Drive may actually result in an increase in delays, which could impact the mainline of Playland Parkway (southbound lanes).

At the Old Post Road intersection at Playland Access Drive and Thruway Access Drive it is likely that either location would meet the minimum standards for consideration for traffic signals.

INTRODUCTION

The purpose of this report is to provide the City of Rye with an analysis of current operations on the surrounding roadway network and nearby intersections and the potential impact of removing the existing 70,000 square-foot office building and constructing a 135 age-restricted residential unit development at 120 Old Post Road.

This analysis addresses traffic conditions surrounding the subject property for a typical weekday morning and weekday afternoon peak hour condition. It addresses traffic conditions along Playland Access Drive, Old Post Road, Theodore Fremd Avenue and the Access Ramps to Playland Parkway. It includes an evaluation of current and future background and combined traffic volumes at the nearby intersections for both the weekday morning and weekday afternoon peak hours.

Project Description

The existing office building comprises 70,000 square feet of gross floor area. At the time of the traffic counts, the building was mostly vacant, with minimal traffic generated throughout the day.

The proposal is to demolish this building and construct a 135-unit, age-restricted residential development. Access for the existing building will remain unchanged, with full access to Playland Access Drive.

EXISTING CONDITIONS

This section of the report describes the current traffic volumes obtained through actual manual traffic volume counts and volumes provided by others at nearby intersections. In this section of the report there is a description of existing roadway conditions, traffic control, site access, capacity analysis procedures and the results of these analyses.

Roadways

The site is located in the northwest corner of the T-type intersection of Playland Access Drive and Old Post Road. The following is a description of the roadways serving the subject property.

- 1. Playland Access Drive This is a two-lane, County-maintained roadway, beginning to the northwest at the signalized intersection with Theodore Fremd Avenue. It intersects with the southbound ramps for Playland Parkway, provides access to the subject property and terminates at an unsignalized intersection with Old Post Road. It has a posted speed limit of 30 miles per hour, provides a double yellow centerline, curbs and paved shoulders in certain sections. Sidewalks are not provided on this roadway.
- 2. Old Post Road It is a generally both a north-south and east-west, County-maintained roadway. This roadway begins to the southwest at a Y-type intersection with Boston Post Road (U.S. Route 1), continues in an easterly direction intersecting with Playland Access Drive, the Playland Parkway Northbound Ramps and continues to the northeast terminating again at T-type intersection with Boston Post Road (U.S. Route 1). The section of Old Post Road between the intersection of North Street and northerly intersection with Boston Post Road is a one-way, one-lane roadway limited to westbound movements.

The Old Post Road/southerly intersection with Boston Post Road intersection is controlled with a traffic signal, which is maintained by the City of Rye. Other intersections are controlled with STOP signs at the Playland Access Drive southbound and the Thruway Access Road southbound approaches. The westbound approach of Old Post Road at North Street is controlled with STOP signs on both approaches. The posted speed limit on this roadway is 30 miles per hour. It provides a double yellow centerline, curbing and sidewalks in certain sections.

- 3. North Street North Street is a north-south, County-maintained roadway, which begins at the Old Post Road intersection immediately north of the Playland Parkway northbound ramps intersection. This road continues in a northerly direction intersecting with Theodore Fremd Avenue, providing an overpass over Interstate 95 and continuing north to the Hutchinson River Parkway. It is a two-lane road maintained by the County to the intersection of Harrison Avenue. From this intersection to the Parkway it is designated New York Route 127. For its entire length it provides a double yellow centerline. It has a posted speed limit of 30 miles per hour in the Study Area.
- 4. Theodore Fremd Avenue This is an east-west, County-maintained roadway. It provides one travel lane in each direction and a center turning lane for its entire length between the Harrison Village/Town line to the west and the intersections with North Street to the northeast and ends at Purchase Street. It has a posted speed limit of 30 miles per hour, provides sidewalks generally along the southerly side for its entire length, with sidewalks in the vicinity of the North Street intersection on the northerly side. The intersections with North Street and Theodore Fremd Avenue are controlled with traffic signals, which are maintained by the City of Rye.

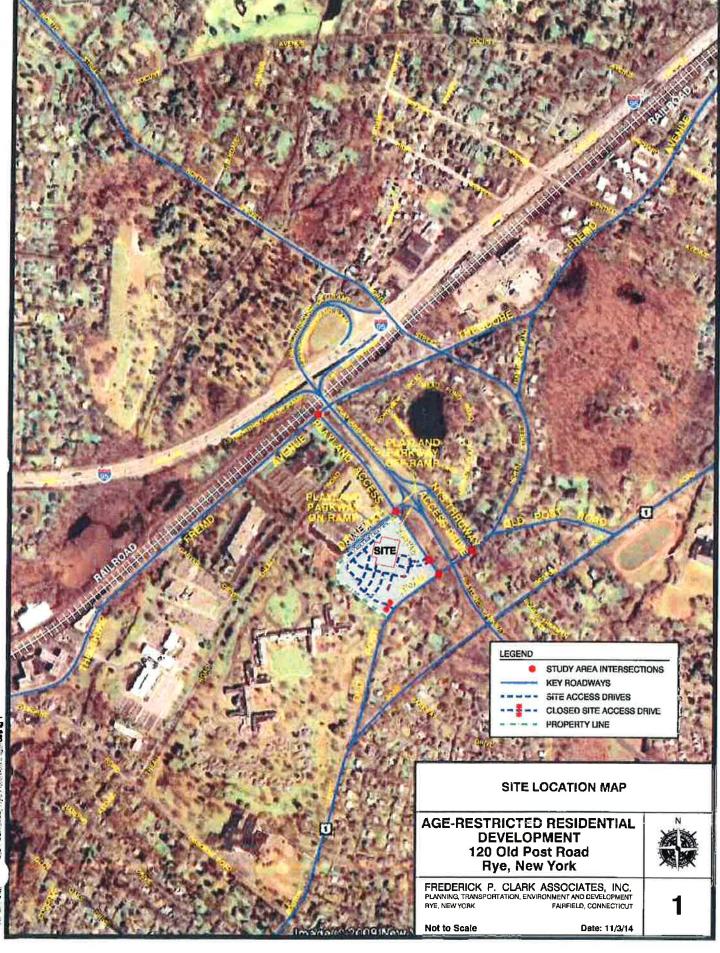

- Playland Parkway This is a generally north-south, limited-access arterial, beginning at Interchange 19 on the New England Thruway (Interstate 95) and terminating to the southeast at Playland, which is a County-owned Park. A full-movement interchange provides access to Playland Access Drive and Old Post Road/North Street near the site. Playland Parkway provides two travel lanes in each direction and is median divided to a point south of the Boston Post Road Overpass. There are bridges at Old Post Road and Boston Post Road providing continuous traffic flow on Playland Parkway.
- 6. New England Thruway (Interstate 95) This is a north-south, limited-access, Interstate Highway serving Westchester County. It provides three lanes in each direction and is median divided. The posted speed limit is 55 miles per hour for vehicles and 50 miles per hour for trucks. Access is provided to the Study Area via Interchange 19, which provides ramps in both directions on Interstate 95. These ramps connect directly to Playland Parkway, which provides direct to Playland Access Drive and Old Post Road.

Figure 1 provides a reference of the site location for all of the roads described above. Figure 2 provides the current street system characteristics for each of these roads, as described above. Photographs of the area roads are included in the Appendix of this report.

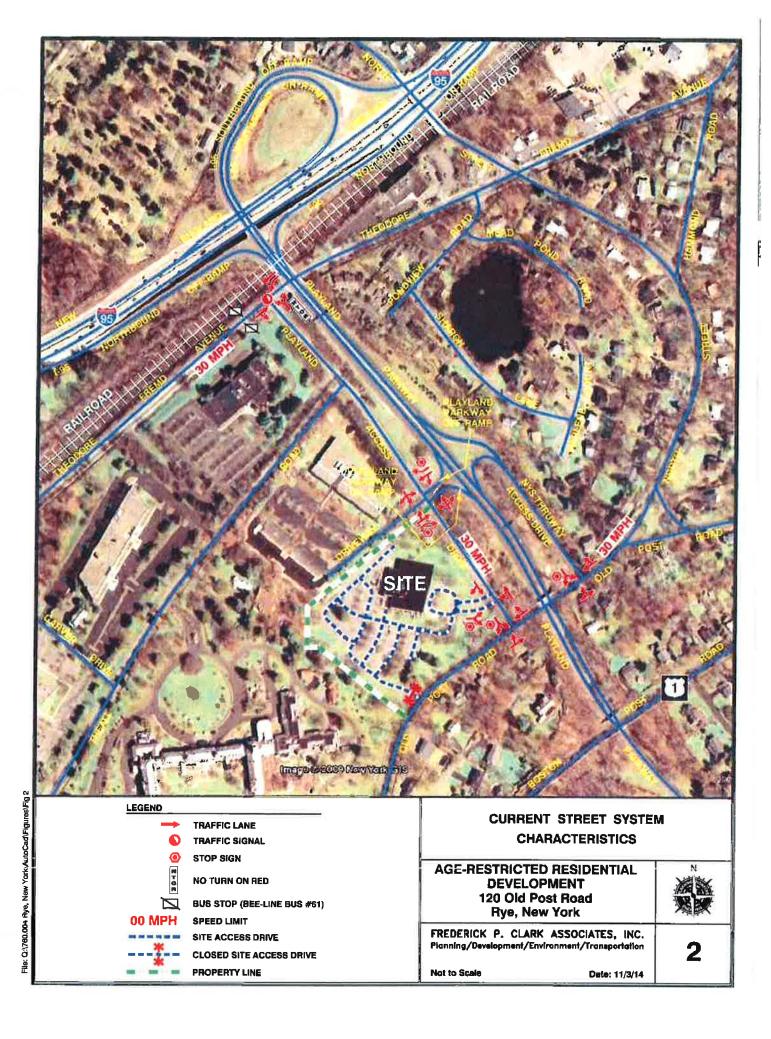

Traffic Volumes

To identify baseline conditions for area roads, 2014 traffic volumes available in the Traffic Study completed for the proposal to develop 150 North Street were used for the following intersections during the weekday morning peak hour:

Theodore Fremd Avenue at Playland Access Drive;

State of Dear of the State of the State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State of State

- Playland Access Drive at Playland Parkway Eastbound On/Off Ramps/Medical
 Office Building Access Drive; and,
- Old Post Road at Playland Parkway Northbound On/Off Ramps.

The 2012 existing traffic volumes from the Office to Hotel Building Conversion Traffic Study prepared by Frederick P. Clark Associates, Inc. were adjusted and balanced to the most recent traffic data for the site access drive. For the intersection of Old Post Road at Playland Access Road, manual turning movement counts were conducted by Frederick P. Clark Associates on Thursday, October 30, 2014 from 7:00 A.M. to 9:00 A.M. These volumes were adjusted where appropriate to the surrounding intersection volumes to generate the 2014 existing traffic volumes for a weekday morning peak hour. The highest volumes found at each intersection were used.

For the weekday afternoon peak hour existing traffic volumes for 2013 obtained from a Playland Traffic Study were used for the four Study Area intersections. The 2012 existing traffic volumes from the Office to Hotel Building Conversion Traffic Study prepared by Frederick P. Clark Associates, Inc. were adjusted, as needed, at the site frontage. A one percent growth rate was applied to these volumes to the baseline year, 2014.

Based on the results of the field surveys, the peak hour volumes were identified to occur during the following time periods:

- Weekday morning Vary by intersection; and,
- Weekday afternoon 4:45 to 5:45 P.M.

Old Post Road, east of Playland Parkway Northbound On/Off Ramps, had a two-way volume of 380 and 399 vehicles during the two peak hours noted above. On Old Post Road west of the same intersection the two-way volume was recorded at 878 and

699 vehicles during the same two peak hours. For the section of Old Post Road west of the Playland Access Drive the two-way volume was 665 and 417 vehicles during the two peak hours noted above. Playland Access Drive, north of Old Post Road the two-way volume was 541 and 512 vehicles during the two peak hours noted above

Theodore Fremd Avenue, west of the Playland Access Drive intersection had a two-way volume of 681 and 669 vehicles during the two peak hours noted above. For the section east of the Playland Parkway Access Drive the two-way volume was found to be 628 and 617 vehicles during the same peak hours noted above.

For reference purposes, the medical office building access drive intersection with Playland Access Drive had a driveway volume of 195 and 101 vehicles during the two peak hours. The site driveway had a two-way volume of 4 and 6 vehicles during the two peak hours. Table 1 provides a summary of the volumes noted above. Figures 3 and 4 show the peak hour volumes for the weekday morning and weekday afternoon peak hours, respectively. The field sheets for the 2014 traffic counts at the Old Post Road/Playland Access Road intersection are included in the Appendix of this report

Accident Experience

The latest available accident data was obtained from the City of Rye Police Department for a period beginning January 1, 2011 through December 31, 2013 for Playland Access Road and Old Post Road. For the intersection of Playland Access Road at Theodore Fremd Avenue, there were a total of 7 accidents recorded during this three-year period. Data indicates that 57 percent of the accidents were limited to only property damage and 43 percent involved injuries. The collision types were 86 percent involving a rear-end collision and 14 percent involved a left turn collision. The contributing factors were 44 percent unknown and 14 percent were driver fell asleep, pavement slippery, traffic control disregarded and driver inattention. It was found that 86 percent of the accidents occurred during daylight hours and 57 percent occurred on dry road conditions.

For the section of Playland Access Road between Theodore Fremd Avenue and Playland Parkway Southbound On/Off Ramp/Medical Office Building Access Drive, there were a total of 11 accidents recorded during this three-year period. Data indicates that 82 percent of the accidents were limited to only property damage and 18 percent involved injuries. The collision types were 55 percent involving a rear-end collision, 27 percent were right angle collisions and 9 percent involved left turn and right turn collision. The contributing factors were 55 percent driver inattention and 9 percent were following too closely, failure to grant right-of-way, unknown and view obstructed. It was found that all of the accidents occurred during daylight hours and 55 percent occurred on dry road conditions.

For the intersection of Playland Access Road at Playland Parkway Southbound On/Off Ramp/Medical Office Building Access Drive, there were a total of 18 accidents recorded during this three-year period. Data indicates that 83 percent of the accidents were limited to only property damage and 17 percent involved injuries. The collision types were 44 percent involving a right angle collision, 21 percent involved left turn collision, 17 percent involved a rear-end collision and 6 percent involved right turn collision, sideswipe in the same direction and backing. The contributing factors were 38 percent for failure to grant right-of-way, 33 percent driver inattention, 11 percent were unknown and 6 percent involved pavement slippery, traffic control disregarded and unsafe backing. It was found that 89 percent of the accidents occurred during daylight hours and on dry road conditions. For the section of Playland Access Road between Playland Parkway Southbound On/Off Ramp/Medical Office Building Access Drive and Site Access Drive, there were no recorded accidents.

For the intersection of Playland Access Road at Site Access Drive, there were no recorded accidents. For the section of Playland Access Road between Site Access Drive and Old Post Road, there were no recorded accidents.

For the intersection of Old Post Road at Playland Access Road, there were a total of 3 accidents recorded during this three-year period. Data indicates that all of the accidents were limited to only property damage. The collision types were 67 percent involving a rear-end collision and 33 percent involved a left turn collision. The contributing factors were 34 percent for following too closely and 33 percent were failure to grant right-of-way and traffic control disregarded. It was found that 67 percent of the accidents occurred during daylight hours and 33 percent occurred on dry road conditions. For the section of Old Post Road between Playland Access Road and Playland Parkway Northbound On/Off Ramps, there were no recorded accidents.

For the intersection of Old Post Road at Playland Parkway Northbound On/Off Ramps, there were a total of 3 accidents recorded during this three-year period. Data indicates that 67 percent of the accidents were limited to only property damage and 33 percent involved injuries. The collision types were 67 percent involving a rear-end collision and 33 percent involved a left turn collision. The contributing factors were 67 percent for following too closely and 33 percent were failure to grant right-of-way. It was found that all of the accidents occurred during daylight hours and on dry road conditions. Table 2 provides a more detailed summary of the accident data

Capacity Analysis Procedures

Capacity analysis procedures are provided in the Appendix of this report. The analyses follow a SYNCHRO computer model and information provided by the Transportation Research Board (TRB) and the Highway Capacity Manual (HCM) published in 2010.

Capacity Analysis Results

The results of the analysis for the Study Area intersections included in the designated Study Area are described below:

- 1. Theodore Fremd Avenue at Playland Access Drive Results of the analysis of this signalized intersection indicate it is currently operating at an overall Level of Service "B" during both the weekday morning and weekday afternoon peak hours. It includes a fixed time westbound left turn leg, which should be modified.
- 2. Playland Access Drive at Playland Parkway Eastbound On/Off Ramp/Medical Office Building Access Drive Results of the analysis of this unsignalized intersection indicate it is currently operating at a Level of Service "E" and "C" or better during the weekday morning and weekday afternoon peak hours, respectively.
- 3. Playland Access Drive at Office Building Access Drive Results of the analysis of this unsignalized intersection indicate it is currently operating at a Level of Service "B" or better during each peak hour analyzed.
- 4. Old Post Road at Playland Access Drive Results of the analysis of this unsignalized intersection indicate it is currently operating at a Level of Service "F" and "D" or better during the weekday morning and weekday afternoon peak hours, respectively. This reflects conditions exiting from the STOP sign.
- Old Post Road at Thruway Access Drive Results of the analysis of this unsignalized intersection indicate it is currently operating at a Level of Service "F" and "D" or better during the weekday morning and weekday afternoon peak hours, respectively. This represents conditions exiting the ramp.

Table 3 provides a more detailed summary of the results of the analyses, as described above. This table includes the type of control, lane group/movement, description, the Level of Service, average vehicle per vehicle and the volume to capacity ratio. The capacity analysis worksheets are included in the Appendix of this report.

Notes:

- Synchro 8.0 is used for capacity analysis.
- Level of Service determining parameter is called the service measure.
- For Signalized Intersections: Level of Service/Average Total delay per vehicle (seconds/vehicle).
- TWSC = Two-Way STOP Control.
- For TWSC Intersections: Level of Service/Average Control delay per vehicle (seconds/vehicle).

Table 3 Cont'd

- ITE publication for Traffic Access and Impact Studies for site development "A Recommended Practice" indicated that overall Level of Service ratings of A to D are normally considered acceptable for signalized intersections (Level C or better are considered desirable). Levels of Service E and F are normally undesirable.
- V/C ratio indicates the amount of congestion for each Lane Group or Movement. Any V/C ratio greater than or equal to one indicates that the Lane Group or Movement is operating at above capacity.
- Physical Units consist of the following:
 - 1. Lane Group, Approach and Intersection Overall for Traffic Signal Controlled Intersections.
 - 2. Movements for TWSC Intersections.

NB = Northbound

EB = Eastbound

SB = Southbound

WB = Westbound

L = Left Turn

T = Through

R = Right Turn

APP. = Approach

FUTURE TRAFFIC IMPACTS

In this section of the report there is a description of the background and combined traffic volumes for a 2016 condition at each of the intersections included in the designated Study Area for the weekday morning and weekday afternoon peak hours. It includes a description of site traffic generation, distribution and assignment of site traffic and results of capacity analyses for a background and combined condition. A comparison of the results of these analyses indicates the potential impact to area roads and intersections. Capacity analyses were conducted to determine impact and if any mitigation is needed.

Background Traffic Volumes

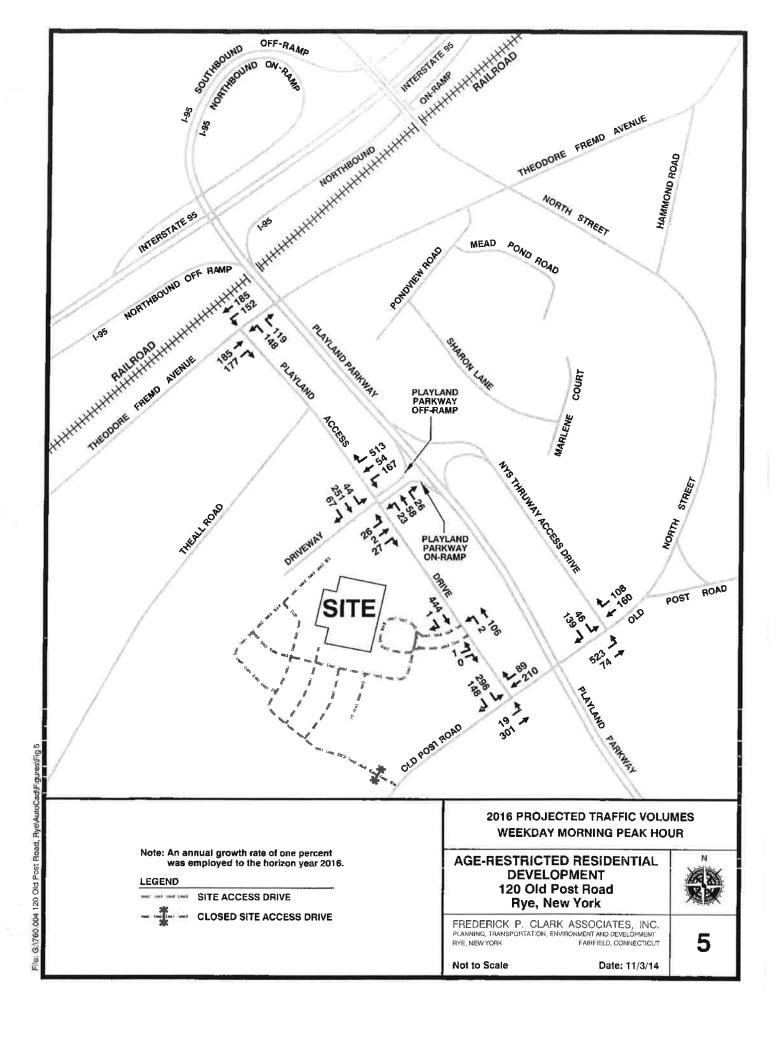

The baseline traffic volumes for 2014 were expanded to reflect a 2016 condition by applying an annual growth rate of one percent. The volumes for this condition are graphically illustrated in Figures 5 and 6 for the peak hours noted above.

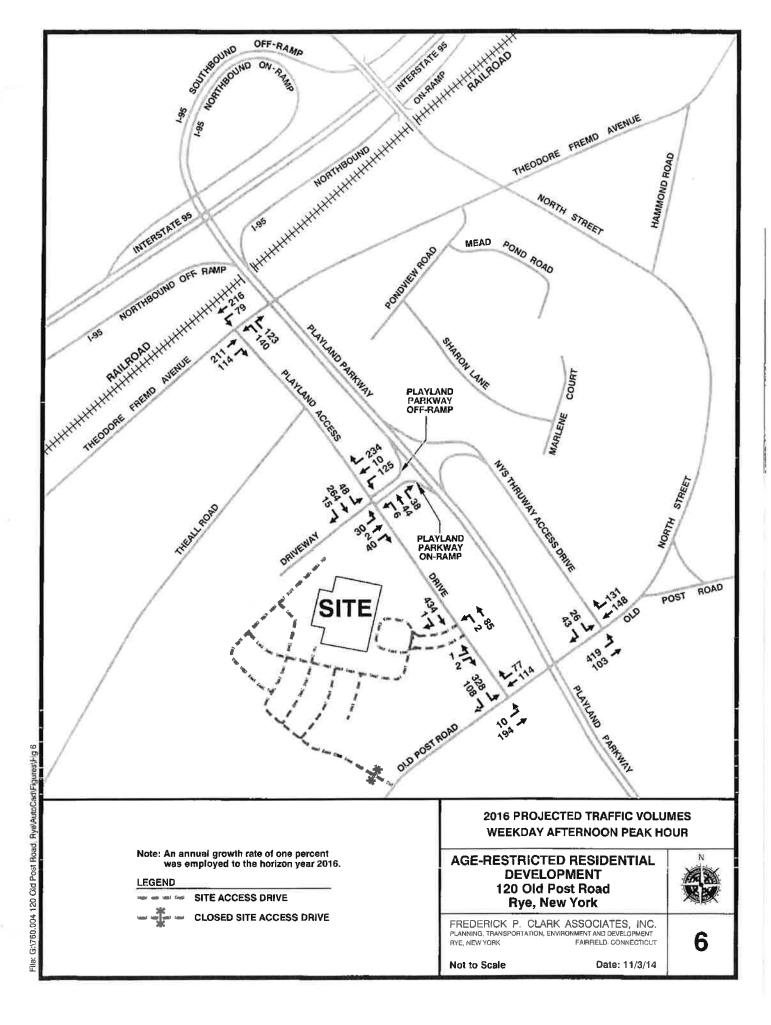

In addition to a general growth rate for traffic in the surrounding area, field observations and discussions with the City of Rye Planning department identified the following other developments:

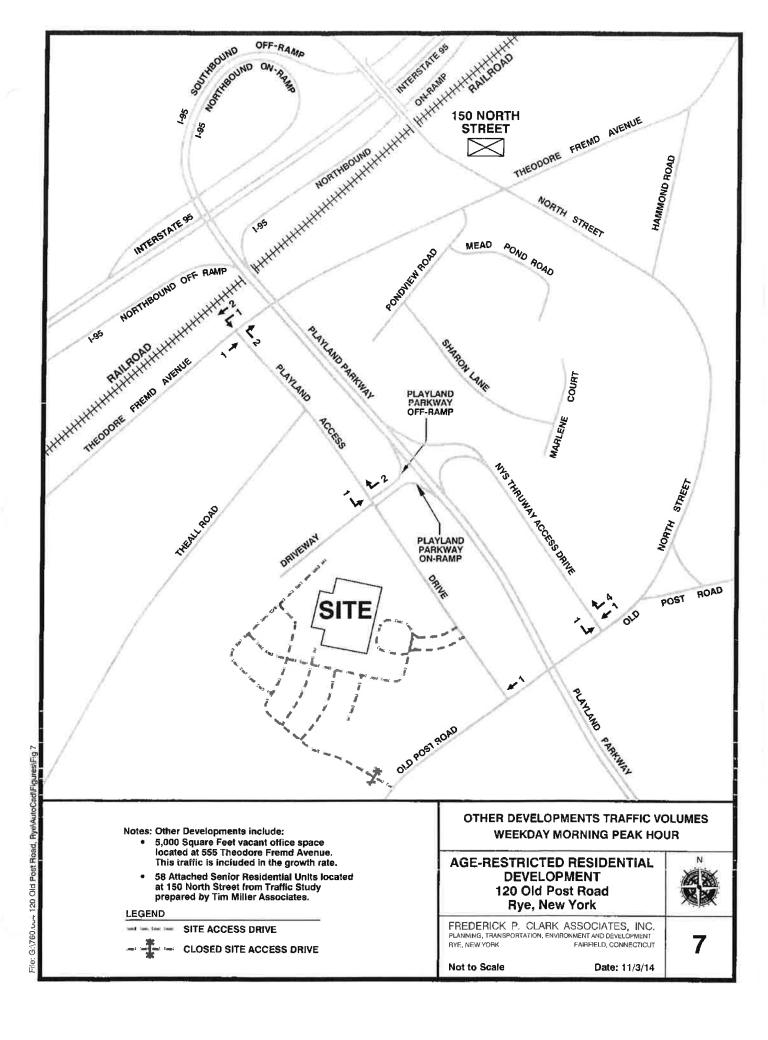

- 58 Attached Senor Residential units at 150 North Street, Traffic Study prepared by Tim Miller Associates, Inc.;
- Year One Development Program, Playland, Traffic Study prepared by John Meyer Consulting, P.C. October, 2013; and,
- 5,000 square-feet of vacant office space located at 555 Theodore Fremd Avenue.

 This traffic is included in the growth rate.

For planning purposes no additional traffic was added during the weekday morning peak hour for the Year One Development Program, Playland. Figures 7 and 8

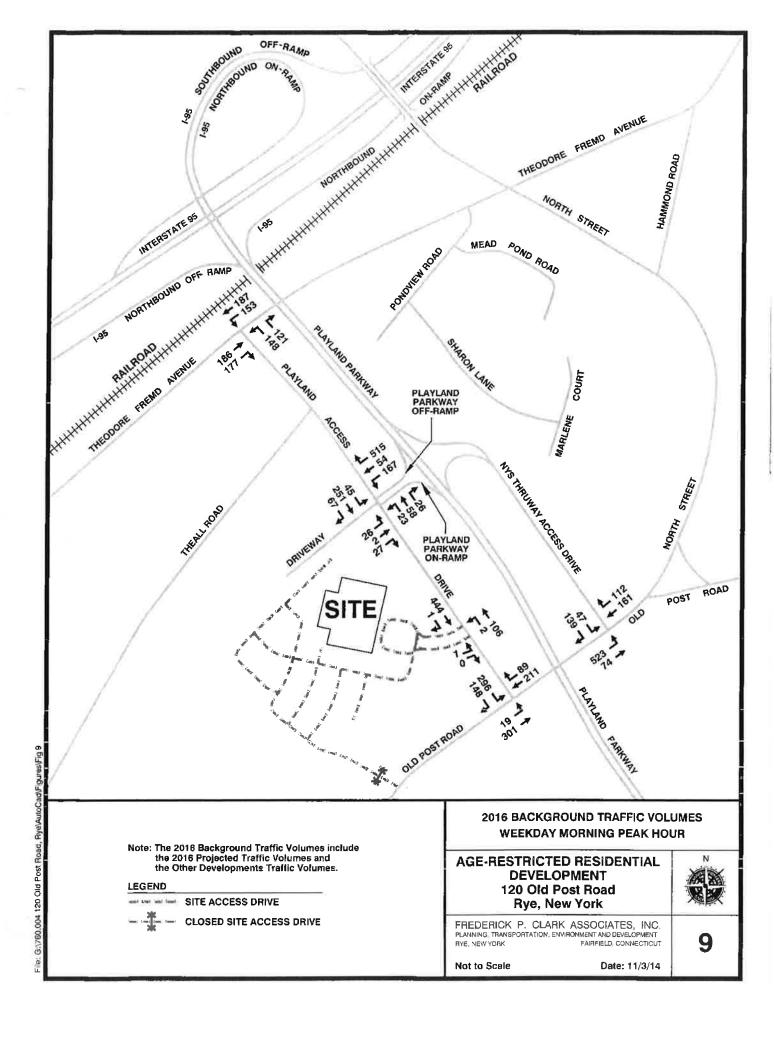

show the other development traffic volumes for each peak hour. Figures 9 and 10 graphically illustrate the 2016 background traffic volumes for area roads and include the growth rate and traffic related to the other developments. It is important to note that the senior residential development and Playland development are not approved applications.

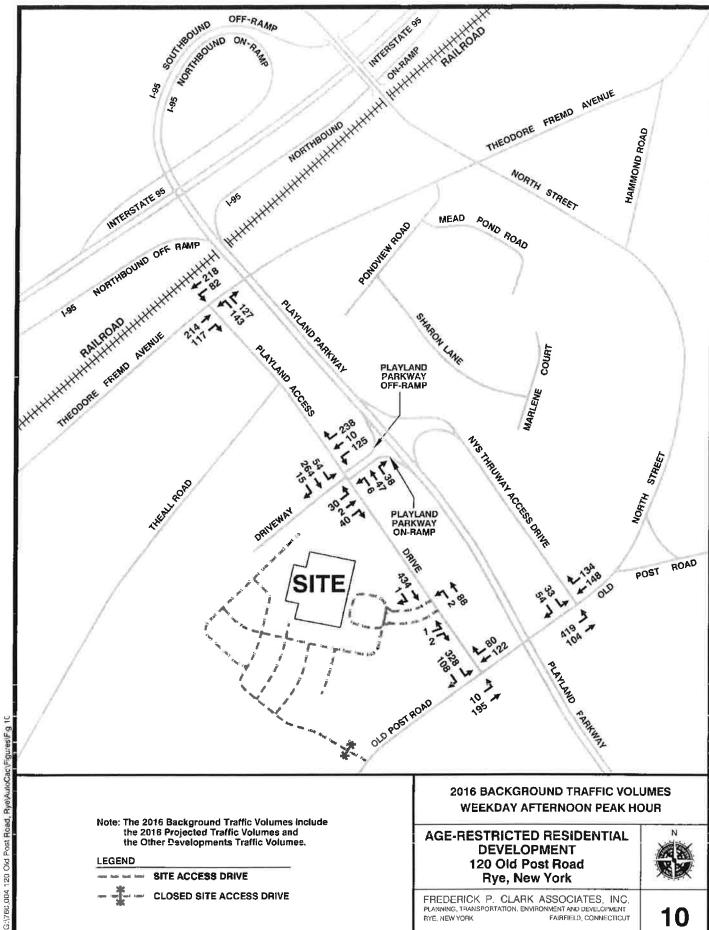

Site Traffic Generation

To estimate the total number of vehicle trips for the proposed 135 age-restricted residential units, trip generation rates were obtained from the 9th Edition of "Trip Generation," published by the Institute of Transportation Engineers (ITE) in 2012. Using the Senior Adult Housing – Attached Code #252 and applying the average rates available, the expected site traffic is 27 and 34 vehicle trip ends during the weekday morning and weekday afternoon peak hours, respectively.

The current office building comprises 70,000 square feet of gross floor area. The building is vacant, except for the Owners of the building offices, which currently generates 4 and 6 vehicle trip ends during the weekday morning and weekday afternoon peak hours, respectively.

To estimate the total number of vehicle trips for this type of building fully occupied with a multi-tenant occupancy, trip generation rates were obtained from the 9th Edition of "Trip Generation," published by the Institute of Transportation Engineers (ITE) in 2012. Using the General Office Code #710 and applying the average rates available for this type of building, the expected estimate for total site traffic is 109 and 104 vehicle trip ends for the weekday morning and weekday afternoon peak hours, respectively. Comparing the current land use to the proposed age-restricted attached residential units, there will be a net decrease in site traffic of 82 and 70 vehicle trip ends during the weekday morning and weekday afternoon peak hours, respectively. Table 4 provides a more detailed breakdown of previous land use and proposed age-restricted attached residential units site traffic generation.

Site Traffic Distribution and Assignment

To develop the anticipated distribution patterns for the additional site traffic, an evaluation of current patterns at the site access drive and patterns for traffic conditions on area roads were analyzed. Based on the results of this analysis it was determined that for arrivals 60 percent of the site traffic will turn right into the subject driveway from Playland Access Drive. It is anticipated that 20 percent will arrive from the southbound off-ramp of Playland Parkway from Interstate 95, 20 percent from the southwest on Theodore Fremd Avenue and the remaining 20 percent from the northeast on Theodore Fremd Avenue. The remaining 40 percent arriving at the site driveway from the south on Playland Access Drive is expected to breakdown to 20 percent arriving from the northeast on Old Post Road and the remaining 20 percent arriving from the southwest on Old Post Road.

For exiting movements it was found that 60 percent of the site traffic will exit and turn right from the driveway to travel southbound on Playland Access Drive to the intersection with Old Post Road. At Old Post Road 40 percent will turn left to travel northeast on Old Post Road, 20 percent turning left onto the Playland Parkway northbound ramps and the remaining 20 percent continuing northeast on Old Post Road to North Street. The remaining 20 percent traveling southeast on Playland Access Drive will turn right onto Old Post Road to travel to Boston Post Road. For the exiting movements turning left at the access drive 40 percent of the site traffic will continue northwest on Playland Access Drive to Theodore Fremd Avenue, where 20 percent will turn left and the remaining 20 percent will turn right.

Figure 11 graphically shows the distribution patterns anticipated for the additional to be added to area roads during the peak hours. Figures 12 and 13 show the site traffic generation and assignment for the peak hours.

File

Combined Traffic Volumes

The combined traffic volumes were developed by adding the residential-related traffic to the area roadways for both peak periods to develop a 2016 combined traffic volume condition. Results of this combination of volumes, with the background traffic volumes, which are previously described in this report, Figures 14 and 15, were prepared.

Capacity Analysis Results - Background and Combined Conditions

The following is a summary of the results of the analyses of the intersections included in this Study Area for both a background and combined condition for the four peak hours:

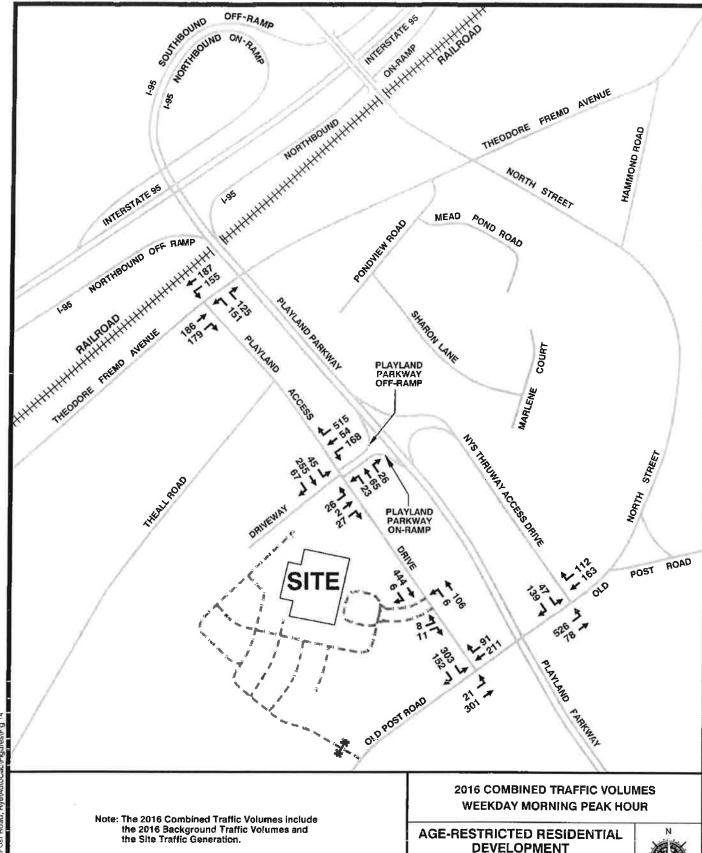

1. Theodore Fremd Avenue at Playland Access Drive

Background – Results of the analysis of this signalized intersection indicate it will operate at an overall Level of Service "B" during both the weekday morning and weekday afternoon peak hours.

Combined – Results of the analysis indicate this intersection will continue to operate the same overall Level of Service during the weekday afternoon peak hour. During the weekday morning peak hour there will be an acceptable change in Levels of Service from "B" to "C" with a change in average vehicle delay of 0.3 seconds.

2. Playland Access Drive at Playland Parkway Southbound On/Off-Ramps/Medical Office Building Access Drive

Background – Results of the analysis of this unsignalized intersection indicate that for the critical movements on the ramp and access drive approaches to the intersection will operate at Level of Service "E" and "C" or better during the weekday morning and weekday afternoon peak hours, respectively. The northbound and southbound critical movements on Playland Access Drive will operate at Level of Service "A" during both peak hours.

Not to Scale

Date: 11/3/14

File: G:\760.vv+ 120 Old Post Road, Rye\AutoCadlFigures\Fig 15

Combined - Results of the analysis of this unsignalized intersection indicate that the Level of Service will remain the same for all movements with an increase in average vehicle delay of at most 1.5 seconds.

3. Playland Access Drive at Office Building Access Drive

Background – Results of the analysis indicate the critical movements will operate at Level of Service "B" or better during both peak hours.

Combined – Results of the analysis indicate critical movements at this intersection will continue to operate at Level of Service "B" or better during the two peak hours. The eastbound right turn movement will change from a Level of Service "A" to "B" during the weekday morning peak hour with an increase in average vehicle delay of 11.9 seconds.

4. Old Post Road at Playland Access Drive

Background — Results of the analysis indicate the critical movements on the southbound approach of Playland Access Drive (STOP sign approach) will operate at Level of Service "F" and "D" during the weekday morning and weekday afternoon peak hours, respectively. Results of the analysis indicate queue lengths totaling an average up to 13 vehicles during the peak hours.

Field observations of this intersection during the peak hours indicate similar vehicle queues and delays; however, these delays typically occur for less than 15 minutes during the peak hours.

Combined – Results of the analysis indicate that the critical movements on the southbound approach of this intersection will maintain the same Level of Service during both peak hours with an increase in average vehicle delay of at most 7.2 seconds. Reuse of the existing building will result in longer delays.

5. Old Post Road at Thruway Access Drive

Background – Results of the analysis of this unsignalized intersection indicate the critical southbound movements from the ramp are operating at Level of Service "F" and "D" during the weekday morning and weekday afternoon peak hours, respectively. The critical movements on Old Post Road are operating at Level of Service "A" during both peak hours.

Combined – Results of the analysis indicate that the critical movements on the southbound approach of this intersection will maintain the same Level of Service during both peak hours with an increase in average vehicle delay of at most 5.9 seconds. Again, reuse of the existing building will result in longer delays.

Table 5 provides a more detailed summary of the results of the analysis of each of these intersections with background and combined conditions. Capacity analysis worksheets are included in the Appendix of this report.

Findings

The purpose of this Traffic Report is to provide the City of Rye with a detailed analysis of potential impacts from this proposed development on adjacent roadways and nearby intersections in the designated Study Area. The proposal is to demolish the existing, but mostly vacant, office building comprising 70,000 square feet of space and construct an age-restricted residential development which will have 135 units. Access will remain the same from Playland Access Drive to the immediate south of the Old Post Road STOP sign-controlled intersection.

The Traffic Study is based on traffic volumes obtained in 2012 through 2014. These volumes were obtained by Frederick P. Clark Associates, Inc. and other Traffic Consultants for different nearby projects.

Notes:

- Synchro 8.0 is used for capacity analysis.
- Level of Service determining parameter is called the service measure.
 For Signalized Intersections Level of Service/Average Total delay per vehicle (seconds/vehicle).
 TWSC = Two-Way STOP Control.

- For TWSC Intersections: Level of Service/Average Control delay per vehicle (seconds/vehicle).
 ITE publication for Traffic Access and Impact Studies for site development "A Recommended Practice" indicated that overall Level of Service ratings of A to D are normally considered acceptable for signalized intersections (Level C or better are considered desirable). Levels of Service E and F are normally undesirable.

- V/C ratio indicates the amount of congestion for each Lane Group or Movement. Any V/C ratio greater than or equal to one indicates that the Lane Group or Movement is operating at above capacity.

 - Synchro 8.0 Macroscopic model as used for storage/queue analysis.
 The Queue Length rows show the 95th percentile maximum queue length in feet.
 The Queue Length is for each lane. The total queue length is divided by the number of lanes and the lane utilization factor.
 The 95th percentile queue is the maximum back of the queue with the 95th percentile traffic volumes.
 Bolded 95th percentile queue exceeds the storage available.
 Physical Units consist of the following:

 Lane Group and Intersection Overall for Traffic Signal Controlled Intersections.
 Movement for TWSC Intersections.
 Anovement for TWSC Intersections.
 Traffic Signal Controlled Intersections.
 The Group and Intersections.
 Traffic Signal Controlled Intersections.

SB = Southbound WB = Westbound R = Right Turn APP = ApproachNB = Northbound EB = Easthound L = Left Turn T = Through

Frederick P Clark Associates, Inc. 03760 und 120 Old Print Road, Rycel Wandergreid + 4705.340.dog

In this Traffic Study it addresses traffic conditions for existing, no-build and build peak hour volumes near the site. It includes the weekday morning and weekday afternoon peak hours. Under the no-build condition it includes other developments, as well as an appropriate growth rate.

The proposal is to demolish the existing, but mostly vacant, office building and construct the age-restricted development, as noted above. To estimate site traffic for the proposed development trip generation rates were obtained from the Institute of Transportation Engineers (ITE) in "Trip Generation," 9th Edition, published 2012. Based on these trip generation rates it is estimated a development of this type and size will generate 27 and 34 vehicle trip ends during the typical weekday morning and weekday afternoon peak hours, respectively. For comparison purposes the current 70,000 square-foot office building, if it was to be fully reoccupied, could generate 109 and 104 vehicle trip ends during the same weekday morning and weekday afternoon peak hours, respectively. Therefore, the proposed residential development would result in a decrease in site traffic generation of 82 and 70 vehicle trip ends during the weekday morning and weekday afternoon peak hours, respectively. This is a significant reduction in site traffic generation potential directly related to the change in land use from an office building to a residential development.

The results of the capacity analysis for existing conditions indicate the Theodore Fremd Avenue/Playland Access Drive signalized intersections operates at an acceptable overall Level of Service "B" during peak hours. During the weekday morning peak hour motorists experience delays at the unsignalized intersection of Playland Access Drive//Playland Parkway/Medical Building, Old Post Road at Playland Access Drive and Old Post Road at Thruway Access Drive. All of the Study Area intersections operate at acceptable Levels of Service during the weekday afternoon peak hour. Similar results are found for 2016 background conditions. In both existing and background conditions analyses the office building located on the site is considered vacant.

Under a future combined condition, which includes the proposed residential development, each of these unsignalized intersections will continue to operate at acceptable Levels of Service, except for some Levels of Service "E" or "F" identified in a background condition. A comparison of the background and combined traffic conditions for each of these intersections indicate that Levels of Service will remain unchanged, except for change from an overall Level of Service "B" to "C" at the signalized intersection of Theodore Fremd Avenue at Playland Access Drive, with an insignificant overall delay due to the residential development of 0.3 seconds per vehicle during this one peak hour. Results of the analyses for the weekday afternoon peak hour indicate Levels of Service will remain the same at each of the unsignalized intersections and at each of the lane groups or approaches with minimal, if any, increase in average vehicle delay due to the proposed residential development.

Based on the results of these analyses it is recommended that the current traffic control and pavement markings at each of these locations remain unchanged. The analysis indicates that the added site traffic for a residential development is insignificant and will not change the overall operation of any of the intersections in the Study Area. In addition, there is a significant benefit of converting this office building to a residential development, which results in a significant decrease in site traffic generation during the key weekday morning and weekday afternoon peak hours.

The results of these analyses have been compared to field observations at each of these locations during both the weekday morning and weekday afternoon peak hours. It is noted that motorists do experience short-term delays at the Playland Parkway off ramp to Playland Access Drive and on the Playland Access Drive and Thruway Access Drive approaches to Old Post Road during peak hours. However, based on the results of this analysis each intersection should maintain STOP control. Any consideration for signalization, if warranted, at the Playland Parkway ramps to Playland Access Drive may

actually result in an increase in delays, which could impact the mainline of Playland Parkway (southbound lanes).

At the Old Post Road intersection at Playland Access Drive and Thruway Access Drive it is likely that either location would meet the minimum standards for consideration for traffic signals.

CAPACITY ANALYSIS PROCEDURES

CAPACITY ANALYSIS PROCEDURES

Intersections – Four methods of analysis are needed to evaluate different kinds of intersections. These methods are based on procedures found in the Fifth Edition of the Highway Capacity Manual 2010 and are described below.

Signalized Intersections

This chapter's methodology applies to three-leg and four-leg intersections of two streets or highways where the signalization operates in isolation from nearby intersections.

Performance Measure – An intersection's performance is described by the use of one or more quantitative measures that characterize some aspect of the service provided to a specific road user group. Performance measures include automobile volume-to-capacity ratio, automobile delay, queue storage ratio, pedestrian delay, pedestrian circulation area, pedestrian perception score, bicycle delay, and bicycle perception score. LOS is considered a performance measure. It is computed for the automobile, pedestrian, and bicycle travel modes.

Travel Modes – There are three methodologies that can be used to evaluate intersection performance from the perspective of motorists, pedestrians, and bicyclists. They are referred to as the automobile methodology, the pedestrian methodology, and the bicycle methodology.

Lane Groups and Movement Groups — A separate lane group is established to (a) each lane (or combination of adjacent lanes) that exclusively serves one movement and (b) each lane shared by two or more movements. The concept of movement groups is also established to facilitate data entry. A separate movement group is established for (a) each turn movement with one or more exclusive turn lanes and (b) the through movement (inclusive of any turn movements that share a lane).

LOS Criteria – LOS criteria for the automobile mode are different from those for the non-automobile modes. The automobile-mode criteria are based on performance measures that are field measurable and perceivable by travelers. The criteria for the non-automobile modes are based on scores reported by travelers indicating their perception of service quality.

Automobile Mode – LOS for Automobile Mode can be characterized for the entire intersection, each intersection approach, and each lane group. Control delay alone is used to characterize LOS for entire intersection or an approach. Control delay and volume-to-capacity ratio are used to characterize LOS for a lane group. Delay quantifies the increase in travel time due to traffic signal control. It is also a surrogate measure of driver discomfort

and fuel consumption. The volume-to-capacity ratio quantifies the degree to which a phase's capacity is utilized by a lane group. The following describes each LOS.

Level of Service A – It describes operations with a control delay of 10.0 seconds per vehicle or less and a volume-to-capacity ratio no greater than 1.0. This level is typically assigned when the volume-to-capacity ratio is low and either progression is exceptionally favorable or the cycle length is very short. If it is due to favorable progression, most vehicles arrive during the green indication and travel through the intersection without stopping.

Level of Service B – It describes operations with control delay between 10 to 20 seconds per vehicle and a volume-to-capacity ratio no greater than 1.0. This level is typically assigned when the volume-to-capacity ratio is low and either progression is highly favorable or the cycle length is short. More vehicle stop than with LOS A.

Level of Service C – It describes operations with control delay between 20 to 35 seconds per vehicle and a volume-to-capacity ratio no greater than 1.0. This level is typically assigned when progression is favorable or the cycle length is moderate. Individual cycle failures (i.e., one or more queued vehicles are not able to depart as a result of insufficient capacity during the cycle) may begin to appear at this level. The number of vehicles stopping is significant, although many vehicles still pass through the intersection without stopping.

Level of Service D – It describes operations with control delay between 35 to 55 seconds per vehicle and a volume-to-capacity ratio no greater than 1.0. This level is typically assigned when the volume-to-capacity ratio is high and either progression is ineffective or the cycle length is long. Many vehicles stop and individual cycle failures are noticeable.

Level of Service E – It describes operations with control delay between 55 to 80 seconds per vehicle and a volume-to-capacity ratio no greater than 1.0. This level is typically assigned when the volume-to-capacity ratio is high, progression is unfavorable, and the cycle length is long. Individual cycle failures are frequent.

Level of Service F – It describes operations with control delay between 55 to 80 seconds per vehicle and a volume-to-capacity ratio no greater than 1.0. This level is typically assigned when the volume-to-capacity ratio is high, progression is unfavorable, and the cycle length is long. Individual cycle failures are frequent.

The LOS thresholds established for automobile mode at a signalized intersection

CONTROL DELAY (SECONDS PER	LOS BY VC CAPACIT	Y RATIO
VEHICLE) < 10	<u>≤1.0</u>	>1.0 E
>10 to 20	B	F
>20 to 35 >35 to 55	C D	F F
>55 to 80 >80	E F	F F

Note: For approach-based and intersection-wide assessments, LOS is defined by control delay.

Two-Way STOP-Controlled Intersections (TWSC)

One typical configuration is a four-leg intersection, where the major street is uncontrolled, while the minor street is controlled by STOP signs. The other typical configuration is a three-leg intersection, where the single minor-street approach is controlled by a STOP sign.

Theoretical Basic – Gap-acceptance models begin with the recognition that TWSC Intersections give no positive indication or control to the driver on the minor street as to when it is appropriate to leave the stop line and enter the major street. The driver must determine when a gap on the major street is large enough to permit entry and when to enter, on the basis of the relative priority of the competing movements. This decision-making process has been formalized analytically into what is commonly known as gap-acceptance theory. Gap-acceptance theory includes three basic elements: the size and distribution (availability) of gaps on the major street, the usefulness of these gaps to the minor-street drivers, and the relative priority of the various movements at the intersection.

Critical Headway and Follow-Up Headway – The critical headway is defined as the minimum interval in the major street traffic stream that allows intersection entry for one minor-street vehicle. Thus, the driver's critical headway is the minimum headway that would be acceptable. Critical headway can be estimated on the basis of observations of the largest rejected and smallest accepted headway for a given intersection. The follow-up headway is defined as the time between the departure of one vehicle from the minor street

and the departure of the next vehicle using the same major-street headway, under a condition of continuous queuing on the minor street.

Base Critical Headways for TWSC Intersections

VEHICLE MOVEMENT	ВА	SE CRITICAL HEAD	WAY	
	Two Lanes	Four Lanes	Six Lanes	
Left turn from major	4.1	4.1	5.3	
U-turn from major	N/A	6.4 (wide) 6.9 (narrow)	5.6	
Right turn from minor	6.2	6.9	7.1	
Through traffic	1-stage:6.5	1-stage:6.5	1-stage:6.5*	
0n major	2-stage, stage I: 5.5	2-stage, stage I: 5.5	2-stage, stage I: 5.5*	
	2-stage, Stage II: 5.5	2-stage, Stage II: 5.5	2-stage, Stage II: 5.5*	
Left turn from	1-stage:7.1	1-stage:7.5	1-stage:6.4	
minor	2-stage, stage I: 6.1	2-stage, stage I: 6.5	2-stage, stage I: 7.3	
	2-stage, Stage II: 6.1	2-stage, Stage II: 6.5	2-stage, Stage II: 6.7	

^{*}Use caution; values estimated

Base Follow-up Headways for TWSC Intersections

	BASE	FOLLOW-UP HEAD	WAY
VEHICLE MOVEMENT	Two Lanes	Four Lanes	Six Lanes
Left turn from major	2.2	2.2	3.1
U-turn from major	N/A	2.5 (wide)	2.3
		3.1 (narrow)	
Right turn from minor	3.3	3.3	3.9
Through traffic on major	4.0	4.0	4.0
Left turn from minor	3.5	3.5	3.8

Level Of Service Criteria - LOS for a TWSC intersection is determined by the computed or measured control delay. For motor vehicles, LOS is determined for each minor-street movement (or shared movement) as well as major-street left turn. LOS is not defined for the intersection as a whole or for major-street approaches. LOS F is assigned to

the movement if the volume-to-capacity ratio for the movement exceeds 1.0, regardless of the control delay.

Automobile Mode — The methodology applies to TWSC intersections with up to three lanes (either shared or exclusive) on the major-street approaches and up to three lanes on the minor-street approaches (with no more than one exclusive lane for each movement on the minor-street approach). Effects from other intersections are accounted for only in situations in which a TWSC intersection is located on an urban street segment between coordinated signalized intersections. In this situation, the intersection can be analyzed by using the procedures in urban street segment.

Level-of Service Criteria for Automobile Mode

CONTROL DELAY (SECONDS PER VEHICLE)		OLUME-TO- TY RATIO >1.0
0- 10 >10 to 15 >15 to 25 >25 to 35 >35 to 50 >50	A B C D E F	F F F F

Note: The LOS criteria apply to each lane on a given approach and to each approach on the minor street. LOS is not calculated for major-street approaches or for the intersection as a whole.

CITY COUNCIL AGENDA

CONTACT: Kristen K. Wilson, Esq., Corpora	ation Counsel							
AGENDA ITEM: Consideration of referral to the Board of Architectural Review and City Consultant, the Special Permit Application submitted by New Cingular Wireless PCS, LLC ("AT&T") for modifications to its existing wireless telecommunications facility located at 66 Milton Road.								
RECOMMENDATION: That the Council refer the Special U	Jse Permit Application from New							
Cingular Wireless PCS, LLC ("AT&T") to the BAR.								
IMPACT: ☐ Environmental ☐ Fiscal ☒ Neighborhood ☐ Other:								
DACKOROLIND: ATOT is easting engroved for mod	lifications to its evicting windows							
BACKGROUND: AT&T is seeking approval for modifications to its existing wireless telecommunications facility on the roof of the Blind Brook Lodge located at 66 Milton Road. AT&T is replacing three (3) existing panel antennas with new panel antennas and adding three (3) additional remote radio units to existing unistrut mounts located out of view behind the existing parapet. The modifications represent an upgrade and enhancement of the technology and operation of AT&T's site at this location with little visual change from the current conditions.								
Pursuant to Sections 196-13 and 196-16 of the Code of the City of Rye the Council may refer the application to the Board of Architectural Review (BAR) who will provide a written assessment to the Council.								
See attached.

Mayor Joe Sack and Members of the City Council City of Rye 3rd Floor City Hall 1051 Boston Post Road Rye, NY 10580 (914) 967-7404

Re:

New Cingular Wireless PCS, LLC ("AT&T") Site NYCNNY2Q73 Modification of Existing Wireless Facility – Blind Brook Lodge 66 Milton Road, Rye, New York 10580

Dear Mayor Sack and Members of the City Council:

We are writing to you on behalf of our client, New Cingular Wireless PCS, LLC ("AT&T"), with respect to AT&T's intent to modify to the existing rooftop wireless facility ("Facility") at the captioned location ("Site"). AT&T previously submitted a building permit application dated August 27, 2015 for modifications to the Site and AT&T's representatives have now been advised approval of the City Council is required prior to issuance of a building permit.

AT&T's modifications to this existing telecommunications facility are proposed to provide enhanced 4G services to this area of Rye. AT&T is proposing to replace three (3) existing panel antennas with new panel antennas and add three (3) additional remote radio units ("RRUs") to existing unistrut mounts located out of view behind the existing parapet. While these modifications represent an upgrade and enhancement of the technology and operation of AT&T's site at this location there will be little to no discernable visual change from current conditions.

In keeping with Federal law as further described below, AT&T is requesting waivers of application requirements as set forth under City of Rye Code Section 196-5(U) ("Where the application is for the shared use of an existing telecommunications tower(s) or other high structure, the applicant can seek to waive any application requirements that may not be applicable") and the ability to proceed with the submitted building permit application.

Federal Law Requires a Limited and Expedited Review Process

AT&T is applied for a building permit as an eligible facility under Section 6409(a) of the federal Middle Class Tax Relief and Job Creation Act of 2012, signed into law on February 22, 2012 ("Section 6409"). The Federal Communications Commission ("FCC"), which has interpretative

C&F: 2896708.1

¹ See February 2012 link located at http://www.whitehouse.gov/briefing-room/signed-legislation. Section 6409(a) of the 2012 Middle Class Tax Relief and Job Creation Act is codified at 47 U.S.C.A § 1455 ("Section 6409").

AT&T: Modification of Facility 66 Milton Road, Rye, NY October 5, 2015 Page 2

authority in this field of federal law,² last year adopted rules to clarify and implement the requirements of Section 6409(a) (the "2014 FCC Order").³ The 2014 FCC Order sets forth rules governing the manner in which municipalities must handle requests by carriers to modify existing telecommunications facilities, such as the application currently proposed by AT&T. The FCC confirmed that:

A State or local government may *only require* applicants to provide documentation that is reasonably related to determining whether the eligible facilities request meets the requirements of Section 6409(a); (Emphasis added).⁴

The FCC also confirmed that a municipality must complete its review and approve the application "within 60 days from the date of filing, accounting for tolling, a State or local government shall approve an application covered by Section 6409(a)." If the City does not comply with this process and mandatory timeframe, then the application is automatically deemed to be granted.⁶

The City is Limited to Reviewing the Criteria of Section 6409

The FCC confirmed that a shortened review period "is warranted to reflect the more restricted scope of review applicable to applications under Section 6409(a)." As noted above, Section 6409 requires that the City approve "any *eligible facilities request* for a modification of an existing wireless tower or base station that does not *substantially change* the physical dimensions of such tower or base station". This restricts the City's review to deciding the following issues:

- 1. Whether AT&T's proposal constitutes an eligible facilities request; and
- 2. Whether AT&T's proposal would cause a substantial change to the existing facility.

Once AT&T demonstrates that its proposal is an eligible facility and it will not cause a substantial change to the physical dimensions of the existing facility, then the City of Rye is required to approve AT&T's request within the 60 day period.

AT&T's Proposal Constitutes an "Eligible Facilities Request"

As noted above, this proposal consists of AT&T replacing three existing antennas and adding some minimal additional equipment (3 RRUs) which will not be visible. It should be noted that the proposed modifications will not result in an increase to the overall height of the facility and they do not alter the use as a telecommunications facility.

² See, City of Arlington v. F.C.C., 133 S. Ct. 1863 (2013).

⁷ 2014 FCC Order at ¶ 216.

CUDDY& FEDER

AT&T: Modification of Facility 66 Milton Road, Rye, NY October 5, 2015 Page 3

Section 6409 defines an "eligible facilities request" as "(A) collocation of new transmission equipment; (B) removal of transmission equipment; or (C) replacement of transmission equipment." The definition of "collocation" for purposes of applying Section 6409 is "the mounting or installation of transmission equipment on an eligible support structure for the purpose of transmitting and/or receiving radio frequency signals for communications purposes." Accordingly, AT&T's proposal constitutes "collocation" as it involves the replacement of existing equipment on an existing structure that currently supports the existing facilities of AT&T, Verizon, Sprint, T-Mobile and their affiliate MetroPCS.

AT&T's Proposal Does Not Constitute a "Substantial Change"

AT&T's proposal does not constitute a substantial change to the physical dimensions of the existing facility as that term is intended by Section 6409 and defined in the 2014 FCC Order. ¹⁰ AT&T's proposal does not increase the height of the facility in any way and does not protrude from the building (base station) structure by more than 6 feet. No at-grade work is proposed and AT&T's proposal does not conflict with any approval conditions or compromise concealment elements of the existing wireless facility.

As such, AT&T's proposal satisfies the criteria of Section 6409 while also enhancing wireless communication services to the community and enabling users to access a state-of-the-art, fully digital system for voice communications, messaging, and data transmission and reception.

Federal Law Mandates Approval Through a Non-discretionary Review Process

While the City of Rye retains certain discretionary zoning review over the construction of new facilities, collocations and equipment upgrades (such as this request) must now be approved – and this approval must be granted on an expedited basis. Section 6409 provides that:

Notwithstanding Section 704 of the Telecommunications Act of 1996 or any other provision of law, a state or local government may not deny and shall approve any eligible facilities request for a modification of an existing wireless tower or base station that does not substantially change the physical dimensions of such tower of base station. (Emphasis added).¹¹

This important federal law effectively pre-empts the use of discretionary approval processes by local governments, including requiring variances, special use permits and site plan approvals, for

⁸ 2014 FCC Order at ¶ 178.

⁹ See 2014 FCC Order at ¶¶ 167 ("As proposed in the Infrastructure NPRM, we interpret "base station" to extend the scope of the provision to certain support structures other than towers. Specifically, we define that term as the equipment and non-tower supporting structure at a fixed location that enable Commission-licensed or authorized wireless communications between user equipment and a communications network. We find that the term includes any equipment associated with wireless communications service including, but not limited to, radio transceivers, antennas, coaxial or fiber-optic cable, regular and backup power supply, and comparable equipment" (Emphasis added, citations omitted). See also 168 FN450, 167, 172, 178.

¹⁰ See 2014 FCC Order at ¶¶ 21.

modifications to existing, eligible facilities so that critical wireless infrastructure can be timely deployed.

Conclusion

As noted we seek the grant of waivers in accordance with federal law without the need for any additional approvals. One of the primary purposes of Section 6409 is to "promote the deployment of the network facilities needed to provide broadband wireless services." ¹² The FCC, while allowing for limited review processes, confirmed that municipalities must approve any application within 60 days from the date of filing or a default approval is granted by operation of federal law. Additionally, the scope of any review is ministerial, without discretion and limited to confirming compliance with the FCC's "eligible facilities" criteria. modification is de minimus in nature and its expedited completion will be to the benefit of City residents, businesses, visitors and emergency responders.

Based on federal laws and regulations applicable to this project, AT&T respectfully requests that waivers be granted for any further review by the City Council and this matter be processed by the Building Department without the need for further review by the City Council. In support of this request please find an original and nine copies of the following:

- 1. FCC Statement Regarding the 2014 FCC Order;
- 2. A structural analysis completed by NB+C Engineering Services certifying the structural capacity of the building to accommodate the modifications; and
- 3. Drawings prepared by NB+C Engineering Services dated February 11, 2015 and last revised May 8, 2015 providing details of the planned upgrades.

We look forward to hearing from you concerning this minor modification. If you should have any questions or require anything further, please do not hesitate to contact me. Thank you in advance for your consideration of the attached materials.

Very truly yours.

Daniel M. Laub

FCC BOOSTS WIRELESS BROADBAND BY EASING INFRASTRUCTURE BURDENS

New rules continue to protect the environment and historic properties, safeguard Tribal, State, and local priorities

Washington, D.C. – The Federal Communications Commission adopted a *Report and Order* that takes critical steps to promote deployment of the wireless infrastructure necessary to provide the public with ubiquitous, advanced wireless broadband services.

The Report and Order updates and tailors the manner in which the FCC evaluates the impact of proposed deployments on the environment and historic properties. It also adopts rules to clarify and implement statutory limitations on State and local government authority to review infrastructure siting applications—including a "deemed granted" remedy if a State or local government fails to act on an eligible facilities modification request under Section 6409(a) of the Spectrum Act. Finally, it adopts an exemption from the environmental public notification process for "temporary towers" that are in place only for short periods of time.

Taken together, these steps lay the groundwork necessary for delivering more wireless capacity in more locations to consumers throughout the United States. At the same time, it adheres to statutory obligations to protect the environment and historic properties, and it safeguards Tribal, State, and local land-use priorities as well as safety and aesthetic interests.

Action by the Commission October 17, 2014, by Report and Order (FCC 14-153). Chairman Wheeler, Commissioners Clyburn, Rosenworcel, Pai and O'Rielly. Chairman Wheeler, Commissioners Clyburn, Rosenworcel, Pai and O'Rielly issuing statements

Structural Certification for LTE 2C/CSOF Project

Site Address: 66 Milton Rd, Rye, New York 10580, Westchester County

Site Name: Playland

Site Number: NYCNNY2Q73 FA Number: 10105111

Dear Mr. Pawelczak:

Pursuant to your request, Network Building + Consulting Engineering Services ("NB+C ES") has evaluated the existing structure and mounts at the subject location. The existing structure is a 59'-0" building with steeple. The below listed appurtenances are to be located on the existing steeple wall at an approximate elevation of 88'-0" AGL. The following tables below show the existing and proposed antenna installation by AT&T for the LTE2C equipment upgrade.

Table 1 - Existing AT&T Antenna and Cable Information

Center Line Elevation (ft)	Total No. of Antennas	Antenna Model / Mount	Carrier	Feed Line (in)
88'-0"	6	(3) Katherin 742-264 Panel Antennas¹ (3) Powerwave P65-15-XLH-RR Panel Antennas² (3) ALU RRH2x40-07L 700MHz RRHs¹ (3) DC-2 Power and Fiber distribution boxes¹ (9) Pipe masts (3) RRH Unistrut Mounts	AT&T	Existing to Remain

1. Existing equipment to remain. 2. Existing equipment to be removed

Table 2 - Proposed AT&T Antenna and Cable Information

Center Line Elevation (ft)	Total No. of Antennas	Antenna Model / Mount	Carrier	Feed Line (in)
88'-0"	6	(2) Andrew SBNHH-1D65A Panel Antennas (2) ALU RRH2x60-1900A-4R 1900MHz RRHs (3) existing pipe masts (3) existing RRH unistrut mounts	AT&T	-

As part of this review and analysis, NB+C ES has reviewed Construction Documents dated June 23, 2011 and a Structural Analysis dated January 18, 2011 prepared by URS Corporation as well as AT&T Site Audit photos dated March 11, 2014. This certification assumes that all structural members are in good condition. The contractor shall be responsible for the means and methods of construction. No structural qualification is made or implied by this analysis for existing structural members not supporting the proposed installation. Any deterioration or localized damage or distress to the structure or mounts, should be documented and reported to the engineer and repaired by the contractor prior to the installation of the proposed antennas.

AT&T Site No: NYNYNY2Q73 AT&T Site Name: Playland February 12, 2015 Structural Certification cont. from pg. 1

Based on an assessment of the existing site conditions and by reviewing the aforementioned documents, and per the code provision of the 2010 Building Code of New York State and Structural Standards for Steel Antenna Towers and Antenna Supporting Structures ANSI/TIA-222-G code for applied gravity and lateral loads, using a basic design wind speed of one-hundred-and-ten (110) mph at 88'-0" above ground level with no ice, NB+C ES has determined that the existing structure is adequate and can support the proposed installation without any structural modification or reinforcement to the existing structure. The proposed antennas will be mounted to the existing pipe masts on the steeple façade. The proposed RRHs will be mounted to the existing unistrut mounts on the interior steeple wall.

Please refer to the construction drawings prepared by NB+C ES for additional details. Should you have any questions or require additional information, please feel free to contact us.

$$L_1 = 4 \cdot ft$$

$$S_{\text{mod}} := 3.14159 \cdot \frac{\left(d_{\text{out}}^{4} - d_{\text{in}}^{4}\right)}{32 \cdot d_{\text{out}}}$$

$$I_{\rm m} := 3.14159 \cdot \frac{\left(d_{\rm out}^{4} - d_{\rm in}^{4}\right)}{64}$$

$$I_{\rm m} = 1.53 \cdot {\rm in}^4$$

$$S_{\text{mod}} = 1.064 \cdot \text{in}^3$$

$$F_v := 35ksi$$

$$M_{allow} := S_{mod} \cdot F_y$$

$$M_{allow} = 3103.4 \cdot ft \cdot lbf$$

$$M_{\text{max}} := \frac{P_1 \cdot L_1}{2} = 296.9 \cdot \text{ft} \cdot \text{lbf}$$
 ==> GOOD

MAST DEFLECTION CHECK:

Simply Supported Beam Deflection due to wind loading

$$\Delta := \frac{5}{384} \cdot \frac{P_1 \cdot L_1^3}{E \cdot I_m} = 4.8 \times 10^{-3} \cdot \text{in}$$

$$\Delta_{\text{allow}} := .015h_{\text{mast}}$$

$$\Delta_{\rm allow} = 0.72 \cdot in$$

$$\Delta = 0.005 \cdot in$$

BOLT CONNECTION CHECK:

$$R_{max} := max(R_{ax}, R_{ay}, R_{az})$$

$$R_{\text{max}} = 74.22 \cdot lbf$$

$$R_{A} := \sqrt{\left(\frac{R_{max}}{2}\right)^{2} + \left[\left(\frac{m_{ant}}{2}\right)^{2}\right]}$$

$$R_A = 40.71 \cdot lbf$$

Use this as net reaction at each support by taking the magnitude of the wind and gravity loads

1/2" diameter Hilti - MY20 (6" embeded):

$$F_{T.allow} := 745lbf$$

$$F_{V.allow} := 600lbf$$

Max Load on Anchors

$$F_{Tx} := \frac{R_A}{2}$$

$$F_{Vy} := \frac{R_A}{2}$$

$$F_{Vz} := \frac{R_A}{2}$$

Assume calculated net reaction occurs in all three directions simultaneously

$$\frac{F_{Tx}}{F_{T.allow}} + \frac{F_{Vy}}{F_{V.allow}} + \frac{F_{Vz}}{F_{V.allow}} = 0.095$$
 ==> GOOD

Therefore, the existing pipe mounts connecting to the existing parapet wall are adequate for the proposed installation and the proposed AT&T equipment can be installed as intended. Please see the construction drawings prepared by NB&C ES for further details.

ALCATEL-LUCENT WIRELESS PRODUCT DATASHEET RRH2X60-1900A-4R FOR BAND 2 APPLICATIONS

The Alcatel-Lucent RRH2x60-1900A-4R is a high power, small form factor Remote Radio Head operating in the PCS 1900MHz frequency band (3GPP Band 2) for WCDMA and LTE technologies. It is designed with an eco-efficient approach, providing operators with the means to achieve high quality and high capacity coverage with minimum site requirements and efficient operation.

A distributed Node B expands the deployment options by using two components, a Base Band Unit (BBU) containing the digital assets and a separate RRH containing the radiofrequency (RF) elements. This modular design optimizes available space and allows the main components of a Node B to be installed separately, within the same site or several kilometers apart.

The Alcatel-Lucent RRH2x60-1900A-4R is linked to the BBU by an optical-fiber connection carrying downlink and uplink digital radio signals along

with operations, administration and The maintenance (OA&M) information. 1900

SUPERIOR RF PERFORMANCE

The Alcatel-Lucent RRH2x60-1900A-4R integrates all the latest technologies. This allows to offer best-in-class characteristics.

It delivers an outstanding 120 watts of total RF power thanks to its two transmit RF paths of 60 W each.

It is ideally suited to support multipleinput multiple-output (MIMO) 2x2 operation.

It includes four RF receivers to natively support 4-way uplink reception diversity. This improves the radio uplink coverage and this can be used to extend the cell radius commensurate with 2x2MIMO 2x60 W for the downlink.

The latest generation power amplifiers (PA) used in this product achieve high efficiency (>40%), resulting in improved power consumption figures.

OPTIMIZED TCO

The Alcatel-Lucent RRH2x60-1900A-4R is designed to make available all the benefits of a distributed Node B, with excellent RF characteristics, with low capital expenditures (CAPEX) and low operating expenditures (OPEX).

The Alcatel-Lucent RRH2x60-1900A-4R is a very cost-effective solution to deploy LTE MIMO.

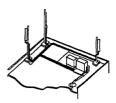

EASY INSTALLATION

The limited space available in some sites may prevent the installation of traditional single-cabinet BTS equipment. However, many of these sites can host an Alcatel-Lucent RRH2x60-1900A-4R installation, providing more flexible site selection and improved network quality along with greatly reduced installation time and costs. The Alcatel-Lucent RRH2x60-1900A-4R is a zero-footprint solution and is convection cooled without fans for silent operation, simplifying negotiations with site property owners and minimizing

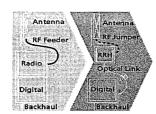

Installation can easily be done by a single person as the Alcatel–Lucent RRH2x60-1900A-4R is compact and weighs about 21 kg, eliminating the need for a crane to hoist the BTS cabinet to the rooftop. A site can be in operation in less than one day.

environmental impacts.

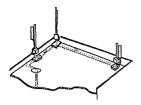

Alcatel·Lucent

Масго

RRH for space-constrained cell sites

Distributed

FEATURES

- RRH2x60-1900A-4R integrates two power amplifiers of 60W rating (at each antenna connector)
- RRH2x60-1900A-4R can operate WCDMA only, LTE only or a mix of WCDMA and LTE
- RRH2x60-1900A-4R offers the possibility for WCDMA (non MIMO) to operate the two radio chains independently (2 blocks of 20MHz anywhere in the band)
- RRH2x60-1900A-4R is a very compact and lightweight product

 Advanced power management techniques are embedded to provide power savings, such as PA bias control or second PA path switch-off

BENEFITS

- MIMO deployment and/or WCDMA and LTE simultaneous operation with only one single unit per sector
- Improved uplink coverage with builtin 4-way receive diversity capability
- RRH can be mounted close to the antenna, eliminating nearly all losses in RF cables and thus reducing power

consumption by 50% compared to conventional solutions

- Distributed configurations provide easily deployable and cost-effective solutions, near zero footprint and silent solutions, with minimum impact on the neighborhood, which ease the deployment
- RETA and TMA support without additional hardware thanks to the AISG v2.0 port and the integrated Bias-Tees. Bias-Tees support AISG DC supply and signaling.

TECHNICAL SPECIFICATIONS

Specifications listed are hardware capabilities. Some capabilities depend on support in a specific software release or future release.

Dimensions and weights

- HxWxD: 510x285x193mm (28 I with solar shield)
- Weight: 21kg (46lbs)

Electrical Data

- Power Supply: -48V DC (-40.5 to -57V)
- Power Consumption (ETSI average traffic load reference): 110W for @1x20W; 250W @2x60W

RF Characteristics

- Frequency band: 1900 (3GPP band 2)
- Output power: 2x60W at antenna connectors
- Technologies supported: W-CDMA and LTE
- Instantaneous bandwidth: 20MHz (MIMO) or 2x20MHz (non MIMO)
- Rx diversity: 2-way and 4-way uplink reception
- Typical sensitivity without Rx diversity (3GPP 25.104): -125.7 dBm for WCDMA and -105 dBm for LTE

Connectivity

- Two CPRI optical ports for daisychaining and up to six RRHs per fiber
- Type of optical fiber: Single-Mode (SM) and Multi-Mode (MM) SFPs
- Optical fiber length: up to 500m using MM fiber, up to 20km using SM fiber
- TMA/RETA: AISG 2.0 (RS485 connector and internal Bias-Tee)
- Six external alarms
- Surge protection for all external ports (DC and RF)

Environmental specifications

- Operating temperature: -40°C to 55°C including solar load
- Operating relative humidity: 8% to 100%
- Environmental Conditions : ETS 300 019-1-4 class 4.1E
- Ingress Protection: IEC 60529 IP65
- Acoustic Noise: Noiseless (natural convection cooling)

Safety and Regulatory Data

- EMC: 3GPP 25113, EN 301 489-1, EN 301 489-23, GR 1089
- Safety: IEC60950-1, EN 60825-1
- Regulatory: CE Mark European Directive: 2002/95/EC (ROHS); 2002/96/EC (WEEE); 1999/5/EC (R&TTE)
- Health : EN 50385

Fet also be subjusted that the later described operation a letter for a projection of objects for a left has defining in the later of a letter of the left of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later of the later WIRING DIAGRAM

E-2

CABLE LABELING NOTES:

- 1. CABLE PORT DIAGRAM ONLY REQUIRED FOR SHELTER SITES.
- SUSCONTRACTOR SHALL FILL OUT CABLE PORT DIAGRAM UPON INSTALLATION. CABLE PORT DIAGRAM WILL BE AFFIXED TO THE INTERIOR SHEITER WALL NEAR THE CABLE ENTRY PORT TO AD IN CABLE IDENTIFICATION. THE CHART IS INTENDED TO BE USED TO RECORD THE LINE AND CORRESPONDING ANTENNA POSITION ON THE TOWER AT TIME OF INSTALLATION.
- (1) COMPLETED COPY PLUS (2) BLANK COPIES OF THE CHART SHOULD BE POSTED IN THE SHELTER IN A PROTECTIVE PLASTIC SLEEVE.
- 4. SWEEP TEST EACH JUMPER AND DOCUMENT THE TEST IN ACCORDANCE WITH PROJECT PROCEDURES.

CABLE COLOR CODING NOTES:

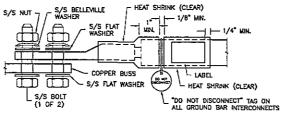

- SECTOR ORIENTATION/AZIMUTH WILL VARY FROM RECION AND IS SITE SPECIFIC. REFER TO RE REPORT FOR EACH SITE TO DETERMINE THE ANTENNA LOCATION AND FUNCTION OF EACH TOWER SECTOR FACE.
- THE ANTENNA SYSTEM CABLES SHALL BE LABELED WITH VINYL TAPE EXCEPT IN LOCATIONS WHERE EMIRONMENTAL CONDITIONS CAUSE PHYSICAL DAMAGE, THEN PHYSICAL TAGS ARE PREFERRED.
- 3. THE STANDARD IS BASED ON EIGHT COLORED TAPES RED. BLUE, GREEN, YELLOW, ORANGE, BROWN, WHITE & MOLET. THESE TAPES MUST BE 3/4" WIDE & UV RESISTANT SUCH AS SCOTCH 35 VINYL ELECTRICAL COLOR CODING TAPE AND SHOULD BE READILY AVAILABLE TO THE ELECTRICAN OR SUBCONTRACTOR ON SITE.
- 4. USING COLOR BANDS ON THE CABLES, MARK ALL RF CABLES BY SECTOR AND NUMBER AS SHOWN ON "CABLE MARKING COLOR CONVENTION"
- 5. WHEN AN EXISTING COAXIAL LINE THAT IS INTENDED TO BE A SHARED LINE BETWEEN GSM/3G AND IS-138 TOMA IS ENCOUNTERED, THE SUBCONTRACTOR SHALL REMOVE THE EXISTING COLOR CODING SCHEME AND REPLACE IT WITH THE COLOR CODING AND TAGGING STANDARD THAT SO OUTLINED IN THE CURRENT VESION DE NO-00027. IN THE ABSENCE OF AN EXISTING COLOR CODING TAGGING SCHEME, OR WHEN INSTALLING PROPOSED COAXIAL CABLES, THIS GUIDELINE SHALL BE IMPLEMENTED AT THAT SITE REGARDLESS OF TECHNOLOGY.
- ALL COLOR CODE TAPE SHALL BE 3M-35 AND SHALL BE A MINIMUM OR (3) WRAPS OF TAPE AND SHALL BE NEATLY TRIMMED AND SMOOTHED OUT 50 AS TO AVOID UNRAWEUMS.
- ALL COLOR BANDS INSTALLED AT THE TOP OF TOWER SHALL HAVE A MINIMUM OF 3/4" OF SPACE IN BETWEEN EACH COLOR.
- ALL COLOR CODES SHALL BE INSTALLED AS TO ALICN NEATLY WITH ONE ANOTHER FROM SIDE TO SIDE.
- IF EXISTING CABLES AT THE SITE ALREADY HAVE A COLOR CODING SCHEME AND THEY ARE NOT INTENDED TO BE REUSED OR SHARED WITH THE GSM TECHNOLOGY, THE EXISTING COLOR CODING SCHEME SHALL REMAIN UNITOUCHED.

CABLE MARKING TAGS:

	CABLE MARKING LOCATIONS TABLE
ю.	LOCATIONS
0	CABLE ENTRY PORT ON THE INTERIOR OF SHELTER.
2	ALL BOTTOM JUMPERS SHALL BE COLOR CODED WITH (1) SET OF 3/4" WIDE BANDS ON EACH END OF THE BOTTOM JUMPER.
3	ALL BOTTOM JUMPERS SHALL BE COLOR CODED WITH (1) SET OF 3/4" WIDE BANDS ON EACH END OF THE BOTTOM JUMPER.

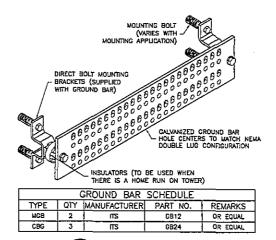

GROUNDING NOTES:

- GROUNDING SHALL COMPLY WITH ARTICLE 250 OF THE NATIONAL ELECTRICAL CODE.
- ALL GROUNDING DEVICES SHALL BE U.L. APPROVED OR LISTED FOR THEIR INTENDED USE.
- ALL WIRES SHALL BE AWG THHN/THWN COPPER UNLESS NOTED DTHERWISE.
- GROUNDING CONNECTIONS TO GROUND RODS, GROUND RING WIRE, TOWER BASE AND FENCE FOSTS SHALL BE EXOTHERMIC ("CADWELDS") UNLESS NOTED OTHERWISE, CLEAN SURFACES TO SHINY METAL WHERE GROUND WIRES ARE CADWELDED TO GALVANIZED SURFACES, SPRAY CADWELD WITH GALVANIZING PAINT.
- GROUNDING CONNECTIONS TO GROUND BARS ARE TO BE TWO-HOLE BRASS MECHANICAL CONNECTORS WITH STANLESS STEEL HARDWARE (INCLUDING SCREW SET) CLEAN GROUND BAR TO SHINY METAL AFTER MECHANICAL CONNECTION, TREAT WITH PROTECTIVE ANTIDIODAYT COATING.
- GROUND CDAYUL CABLE SHIELDS AT BOTH ENDS WITH MANUFACTURER'S CROUNDING KITS.
- ROUTE GROUNDING CONDUCTORS THE SHORTEST AND STRAIGHTEST PATH POSSIBLE. BEND GROUNDING LEADS WITH A MINIMUM 12" RADIUS.
- 8. INSTALL #2 AWG GREEN-INSULATED STRANDED WIRE FOR ABOVE GRADE CROUNDING AND #2 BARE TINNED COPPER WIRE FOR BELOW GRADE GROUNDING UNLESS OTHERWISE NOTED.
- REFER TO GROUNDING PLAN FOR GROUND BAR LOCATIONS. GROUNDING CONNECTIONS SHALL BE EXOTHERMIC TYPE ("CADWELDS") TO ANTENNA MOUNTS AND GROUND RIGH. REMAINING GROUNDING CONNECTIONS SHALL BE COMPRESSION FITTINGS. CONNECTIONS TO GROUND BARS SHALL BE MADE WITH TWO—HOLE LUGS.
- 10. THE GROUND ELECTRODE SYSTEM SHALL CONSIST OF DRIVEN GROUND RODS POSITION ACCORDING TO GROUNDING PLAN. THE GROUND RODS SHALL BE 5/6/*3/0-0" COPPER CLAD STEEL INTERCONNECTED WITH \$2 BARE TINNED COPPER WIRE BURIED 35" BELDW GRADE, BURY GROUND RODS A MAXIMUM OF 15' APART, AND A MINIMUM OF B' APART.
- IF ROCK IS ENCOUNTERED GROUND ROOS SHALL BE PLACED AT AN OBLIQUE ANGLE NOT TO EXCEED 45°.
- EXOTHERMIC WELDS SHALL BE MADE IN ACCORDANCE WITH ERICO PRODUCTS BULLETIN A-AT.
- 13. CONSTRUCTION OF GROUND RING AND CONNECTIONS TO EXISTING GROUND RING SYSTEM SHALL BE DOCUMENTED WITH PHOTOGRAPHS PRIOR TO BACKFILLING SITE, PROMDE PHOTOS TO THE ATALT CONSTRUCTION
- 14. ALL GROUND LEADS EXCEPT THOSE TO THE EQUIPMENT ARE TO BE #2 BARE TINNED COPPER. ALL EXTERIOR GROUND BARS TINNED COPPER.
- 15. PRIOR TO INSTALLING LUGS ON GROUND WIRES, APPLY THOMAS & BETTS KOPR-SHIELD (TM OF JET LUGE INC.). PRIOR TO BOLTING GROUND WIRE LUGS TO GROUND BARS, APPLY KOPR-SHIELD OR EQUAL.
- 16. WHERE BARE COPPER GROUND WIRES ARE ROUTED FROM ANY CONNECTION ABOVE GRADE TO GROUND RING, INSTALL WIRE IN 3/4" PVC SLEEVE, FROM 1' BELOW GRADE AND SEAL TOP WITH SILICONE MATERIAL
- 17. PREPARE ALL BONDING SURFACES FOR GROUNDING CONNECTIONS BY REMOVING ALL PAINT AND CORROSION DOWN TO SHINY METAL FOLLOWING CONNECTION, APPLY APPROPRIATE ANTI-OXIDIZATION PAINT.
- 18. ANY SITE WHERE THE EQUIPMENT (BTS, CABLE BRIDGE, PPC, GENERATOR, ETC.) IS LOCATED WITHIN 6 FEET OF METAL FENCING, THE GROUND RING SHALL BE BONDED TO THE NEARREST FENCE POST USING (3) RUNS OF

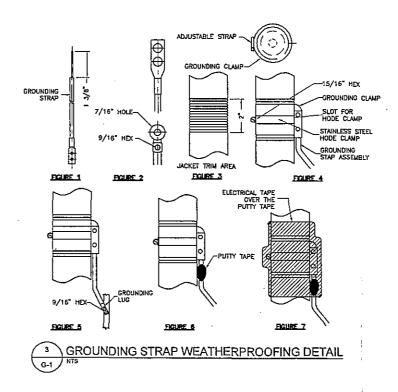

- ALL HARDWARE 18-8 STAINLESS STEEL INCLUDING BELLEVILLES.
 COAT ALL SURFACES WITH ANTI-OXIDATION COMPOUND BEFORE MATING.
 FOR GROUND BOND TO STEEL ONLY: INSERT A DRAGON TOOTH WASHER SETWEEN LUG AND STEEL, COAT ALL SURFACES WITH ANTI-DXIDATION COMPOUND.
- 3. COAT ALL BARRELS WITH ANTI-OXIDATION COMPOUND BEFORE CRIMPING.

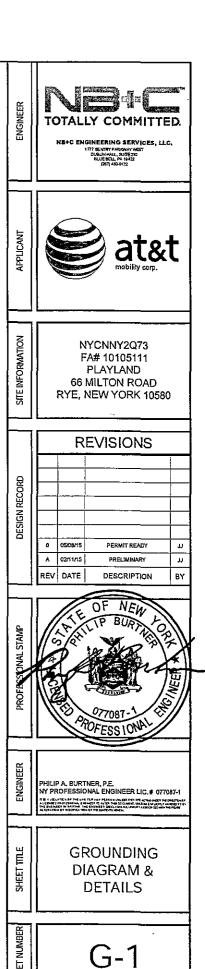

GROUND BAR DETAIL

(G-1)

ELECTRICAL NOTES

- SUBMITTAL OF BID INDICATES THAT THE CONTRACTOR IS COGNIZANT OF ALL JOB SITE CONDITIONS AND WORK TO BE PERFORMED UNDER THIS CONTRACT.
- CONTRACTOR SHALL PERFORM ALL VERIFICATIONS, OBSETVATION TESTS, AND EXAMINATION WORK PRIOR TO ORDERING OF ANY EQUIPMENT AND THE ACTUAL CONSTRUCTION, CONTRACTOR SHALL ISSUE A WRITTEN NOTICE OF ALL FINDINGS TO THE PROJECT MANAGER LISTING ALL MALFUNCTIONS, FAULTY EQUIPMENT AND DISCREPANCIES.
- 3. VERIFY HEIGHTS WITH PROJECT MANAGER PRIOR TO INSTALLATION.
- 4. THESE PLANS ARE DIAGRAMMATIC ONLY, FOLLOW AS CLOSELY AS POSSIBLE.
- CONTRACTOR SHALL COORDINATE ALL WORK BETWEEN TRADES AND ALL DITHEI SCHEDULING AND PROVISIONARY CIRCUMSTANCES SURROUNDING THE PROJECT
- CONTRACTOR SHALL PROVIDE ALL LABOR, MATERIALS, INSURANCE, ÉQUIPMENT, INSTALLATION CONSTRUCTION TOOLS, TRANSPORTATION, ETC., FOR COMPLETE AND FUNCTIONALLY OPERATING SYSTEMS EMERGIZED AND READY FOR USE THROUGHOU AS INDICATED ON DRAWINGS, AS SPECIFIED HEREIN AND/OR AS OTHERWISE REQUIRED.
- 7. ALL MATERIALS AND EQUIPMENT SHALL BE NEW AND IN PERFECT CONDITION WHEN INSTALLED AND SHALL BE OF THE BEST GRADE AND OF THE SAME MANUFACTURER THROUGHOUT FOR EACH CLASS OR GROUP OF EQUIPMENT, ELECTRICAL MATERIALS SHALL BE LISTED AND APPROVED BY UNDERWRITER'S LABORATORIES AND SHALL BEAR THE INSPECTION LABEL "" WHERE SUBJECT TO SUCH APPROVAL MATERIALS SHALL MEET WITH APPROVAL OF ALL COVERNING BODIES HAVING JURISDICTION OVER THE CONSTRUCTION, MATERIALS SHALL BE MANUFACTURED IN ACCORDANCE WITH ALL CURRENT APPLICABLE STANDARDS ESTABLISHED BY ANSI, NEMA AND MORFU, ALL MATERIALS AND EQUIPMENT SHALL BE APPROVED FOR THEIR INTENDED USE AND LOCATION.
- B. ALL WORK SHALL COMPLY WITH ALL APPLICABLE GOVERNING STATE, COUNTY AND CITY CODES AND OSHA, NFPA, NEC & ASHRAE REQUIREMENTS.
- ENTIRE JOB SHALL BE GUARANTEED FOR A PERIOD OF ONE (1) YEAR AFTER THE DATE OF JOB ACCEPTANCE. ALL WORK, MATERIAL AND EQUIPMENT FOUND TO BE FAULTY DURING THAT PERIOD SHALL BE CORRECTED AT ONCE, UPON WRITTEN MOTIFICATION, AT THE EXPENSE OF THE CONTRACTOR.
- PROPERLY SEAL ALL PENETRATIONS. PROVIDE UL LISTED FIRE-STOPS WHERE FENETRATIONS ARE MADE THROUGH FIRE-RATED ASSEMBLIES. WATER-TIGHT USING SILICONE SEALANT.
- 11. LOCATE ALL PENETRATIONS SUCH THAT ALL REINFORCEMENT CONTAINED WITHIN THE EXISTING BUILDING CONSTRUCTION REMAINS INTACT AND UNDISTURBED. SUBMIT LOCATING METHOD TO THE PROJECT MANAGER FOR APPROVAL PRIOR TO EXECUTION.
- 12. DELIVER ALL BROCHURES, OPERATING MANUALS, CATALOGS AND SHOP DRAWINGS TO THE PROJECT MANAGER AT JOB COMPLETION, PROVIDE MAINTENANCE MANUALS FOR MECHANICAL, EQUIPMENT, AFFIX MAINTENANCE LABELS TO MECHANICAL EQUIPMENT.
- 13. ALL CONDUCTORS SHALL BE COPPER, MINIMUM CONDUCTOR SIZE SHALL BE \$12 AWG., UNLESS OTHERWISE NOTED, CONDUCTORS SHALL BE TYPE THIMW, RAYED IN ACCORDANCE WITH NEC 110-14(C).
- 14. ALL CIRCUIT BREAKERS, FUSES AND ELECTRICAL EQUIPMENT SHALL HAVE AN INTERRUPTING RATING NOT LESS THE MAXIMUM INTERRUPTING CURRENT TO WHICH THEY MAY BE SUBJECTED.
- 15. THE ENTIRE ELECTRICAL INSTALLATION SHALL BE GROUNDED IN ACCORDANCE WITH THE NATIONAL ELECTRICAL CODE; ARTICLES 250 & 810 AND THE UTILITY COMPANY STANDARDS.

16. CONDUIT

- A. RIGID CONDUIT SHALL BE ULL LABEL GALVANIZED ZING COATED WITH ZING MERIOR AND SHALL BE USED WHEN INSTALLED IN OR UNDER CONCRETE SLASS, IN CONTACT WITH THE EARTH, UNDER PUBLIC ROADWAYS, IN MASONRY WALLS OR EXPOSED ON BUILDING EXTERIOR. RIGID CONDUIT IN CONTACT WITH EARTH SHALL BE 1/2 LAPPED WITH HUNTS WARP PROCESS NO. 3.
- B. ELECTRICAL METALLIC TUBING SHALL HAVE U.L. LABEL, FITTINGS SHALL BE GLAND RING COMPRESSION TYPE. EMT SHALL BE USED ONLY FOR INTERIOR BILING.
- C. LIQUID—TIGHT FLEXIBLE METAL CONDUIT SHALL BE LILL LISTED AND SHALL BE LISED AT FINAL CONNECTIONS TO MECHANICAL EQUIPMENT & RECTIFIERS AND WHERE PERMITTED BY CODE. ALL CONDUIT IN EXCESS OF SIX FEET IN LENGTH SHALL CONTAIN A FULL—SIZE GROUND CONDUCTOR.
- D. CONDUIT RUNS SHALL BE SURFACE MOUNTED ON CEILINGS OR WALLS UNICES NOTED OTHERWISE ALL CONDUIT SHALL RUN PARALLEL OR PERPENDICULAR TO WALLS, FLOOR, CEILING, OR BEAUS, VERIFY EACHT ROUTING OF ALL EXPOSED CONDUIT WITH THE PROJECT MANAGER PRIOR TO INSTALLING.
- E. PVC CONDUIT MAY BE PROVIDED ONLY WHERE SHOWN, OR IN UNDERGROUND INSTALLATIONS, PROVIDE UN-RESISTANT CONDUIT WHERE EXPOSED TO THE ATMOSPHERE, PROVIDE CROUND CONDUCTOR IN ALL PVC RUNS; EXCEPT WHERE PERMITTED BY CODE TO OMIT.
- 17, ALL ELECTRICAL EQUIPMENT SHALL BE LABELED WITH PERMANENT ENGRAVED PLASTIC LABELS. BACKGROUND SHALL BE BLACK WITH WHITE LETTERS; EXCEPT AS REQUIRED BY COOL TO FOLLOW A DIFFERENT SCHEME.
- 18. UPON COMPLETION OF WORK, CONDUCT CONTINUITY, SHORT CIRCUIT, AND FALL OF POTENTIAL GROUNDING TESTS FOR APPROVAL SUBMIT TEST REPORTS TO PROJECT MANAGER, GROUNDING SYSTEM RESISTANCE SHALL NOT EXCEED 5 OHMS. IF THE RESISTANCE VALUE IS EXCEEDED, NOTIFY THE PROJECT MANAGER FOR FURTHER INSTRUCTION ON METHODS FOR REDUCING THE RESISTANCE VALUE.
- 19. CLEAN PREMISES OF ALL DEBRIS RESULTING FROM WORK AND LEAVE WORK IN A COMPLETE AND UNDAMAGED CONDITION. LEGALLY DISPOSE OF ALL REMOVED, UNUSED AND EXCESS MATERIAL GENERATED BY THE WORK OF THIS CONTRACT, DELIVER REMS INDICATED ON THE DRAWNIGS TO THE OWNER IN GOOD CONDITION. DETAIN SIGNED RECEIPT UPON DELIVERY.
- 20. COORDINATE WITH UTILITY COMPANY FOR CONNECTION OF TEMPORARY AND PERMANENT POWER TO THE SITE. THE TEMPORARY POWER AND ALL HOOKUP COSTS SHALL BE PAUL BY THE CONTRACTOR.
- 21, VERIFY ALL EXISTING CIRCUITRY PRIOR TO REMOVAL AND NEW WORK, MAINTAIN POWER TO ALL OTHER AREAS & CIRCUITS NOT SCHEDULED FOR REMOVAL.

DIVISION 01000 - GENERAL REQUIREMENTS

PART 1 - GENERAL

- ALL WORK TO BE PERFORMED BY AT&T CERTIFIED INSTALLATION PERSONNEL. MINIMUM OF TWO MEMBERS PER CREW.
- REFER TO AT&T STANDARD CONSTRUCTION SPECIFICATIONS, IN CASE OF A CONFLICT, AT&T STANDARD CONSTRUCTION SPECIFICATIONS (LATEST EDITION) SHALL BE FOLLOWED.

PART 2 - GENERAL NOTES

- 1. THE CONTRACTOR SHALL GIVE ALL NOTICES AND COMPLY WITH ALL LAWS, ORDINANCES, RULES, REGULATIONS AND LAWFUL DRDERS OF ANY PUBLIC AUTHORITY, MUNICIPAL AND UTILITY COMPANY SPECIFICATIONS, AND LOCAL AND STATE JURISDICTIONAL CODES BEARING ON THE PERFORMANCE OF THE WORK THE WORK PERFORMED ON THE PROJECT AND THE MATERIALS INSTALLED SHALL BE IN STRICT ACCORDANCE WITH ALL APPLICABLE CODES, REGULATIONS, AND ORDINANCES.
- 2. THE ARCHITECT/ENGINEER HAVE MADE EVERY EFFORT TO SET FORTH IN THE CONSTRUCTION AND CONTRACT DOCUMENTS THE COMPLETE SCOPE OF WORK THE CONTRACTOR BIDDING THE JOB IS NEVERTHELESS CAUTIONED THAT MINOR OMISSIONS OR ERRORS IN THE DRAWMICS AND OR SPECIFICATIONS SHALL NOT EXCUSE SAID CONTRACTOR FROM COMPLETING THE PROJECT AND IMPROVEMENTS IN ACCORDANCE WITH THE INTENT OF THESE DOCUMENTS.
- THE CONTRACTOR OR BIDDER SHALL BEAR THE RESPONSIBILITY OF NOTIFYING (IN WRITING) AT&T'S REPRESENTATIVE OF ANY CONFLICTS, ERRORS OR OMISSIONS PRIOR TO THE SUBMISSION OF CONTRACTOR'S PROPOSAL OR PERFORMANCE OF WARDEN
- THE SCOPE OF WORK SHALL INCLUDE FURNISHING ALL MATERIALS, EQUIPMENT, LABOR AND ALL OTHER MATERIALS AND LABOR DEEMED NECESSARY TO COMPLETE THE WORK/PROJECT AS DESCRIBED HEREIN.
- THE CONTRACTOR SHALL VISIT THE JOB SITE PRIOR TO THE SUBMISSION OF BIDS OR PERFORMING WORK TO FAMILIARIZE HIMSELF WITH THE FIELD CONDITIONS AND TO VERIEY THAT THE PROJECT CAN BE CONSTRUCTED IN ACCORDANCE WITH THE CONSTRUCTION DRAWNINS.
- 6. THE CONTRACTOR SHALL OBTAIN AUTHORIZATION TO PROCEED WITH CONSTRUCTION PRIOR TO STARTING WORK ON ANY ITEM NOT CLEARLY DEFINED BY THE CONSTRUCTION DRAWINGS / CONTRACT DOCUMENTS,
- THE CONTRACTOR SHALL INSTALL ALL EQUIPMENT AND MATERIALS ACCORDING TO THE MANUFACTURER'S/VENDOR'S SPECIFICATIONS UNLESS NOTED OTHERWISE OR WHERE LOCAL CODES OR ORDINANCES TAKE PRECEDENCE.
- 8. THE CONTRACTOR SHALL MAINTAIN A FULL SET OF CONSTRUCTION DOCUMENTS AT THE STE UPDATED WITH THE LATEST REVISIONS AND ADDENBUM'S OR CLARIFICATIONS AVAILABLE FOR THE USE OF ALL PERSONNEL INVOLVED WITH THE PROJECT.
- THE CONTRACTOR SHALL SUPERVISE AND DIRECT THE PROJECT DESCRIBED HEREIN. THE CONTRACTOR SHALL BE SOLELY RESPONSIBLE FOR ALL CONSTRUCTION MEANS, METHODS, TECHNIQUES, SEQUENCES AND PROCEDURES AND FOR COORDINATING ALL PORTIONS OF THE WORK UNDER THE CONTRACT.
- THE CONTRACTOR SHALL BE RESPONSIBLE FOR OBTAINING ALL PERMITS AND INSPECTIONS WHICH MAY BE REQUIRED FOR THE WORK BY THE ARCHITECT/ENGINEER, THE STATE, COUNTY OR LOCAL GOVERNMENT AUTHORITY.
- 11. THE CONTRACTOR SHALL MAKE NECESSARY PROVISIONS TO PROTECT EXISTING SITE CONDITIONS DURING CONSTRUCTION. UPON COMPLETION OF WORK, THE CONTRACTOR SHALL REPAIR ANY DAMAGE THAT MAY HAVE OCCURRED DUE TO CONSTRUCTION ON OR ABOUT THE PROPERTY.
- 12. THE CONTRACTOR SHALL KEEP THE GENERAL WORK AREA CLEAN AND HAZARD FREE DURING CONSTRUCTION AND DISPOSE OF ALL DIRT, DEBRIS, RUBBISH AND REMOVE ALL UNNECESSARY MATERIAL
- 13. THE CONTRACTOR SHALL COMPLY WITH ALL PERTINENT SECTIONS OF THE STATE BASIC BUILDING CODE, LAITEST EDITION, AND ALL OSHA REQUIREMENTS AS THEY APPLY TO THIS PROJECT. ALL DESTING ACTIVE SEWER, WATER, CAS, ELECTRIC, AND OTHER UTILITIES WHERE ENCOUNTERED IN THE WORK, SHALL BE PROTECTED AT ALL TIMES, AND WHERE REQUIRED FOR THE PROPER EXECUTION OF THE WORK, SHALL BE RELOCATED AS DIRECTED BY THE ARCHITECT/ENCHIETE.
- 14. THE CONTRACTOR SHALL NOTIFY AT&T'S REPRESENTATIVE WHERE A CONFLICT OCCURS ON ANY OF THE CONTRACT DOCUMENTS. THE CONTRACTOR IS NOT TO CROSER MATERIAL OR CONSTRUCT ANY PORTION OF THE WORK THAT IS IN CONFLICT UNTIL THE CONFLICT IS RESOLVED BY ATAT'S REPRESENTATIVE.
- THE CONTRACTOR SHALL VERIFY ALL DIMENSIONS, ELEVATIONS, PROPERTY LINES, ETC. ON THE JOB.
- 16. THE CONTRACTOR SHALL NOTIFY THE RF ENGINEER FOR ANTENNA AZIMUTH YERIFICATION (DURING ANTENNA INSTALLATION) PRIOR TO CONDUCTING SITE
- THE GENERAL CONTRACTOR SHALL IN ALL INSTANCES CONFORM TO THE SPECIFICATIONS ISSUED BY AT&T.
- 18. PROVIDE CORE DRILLING AS NECESSARY FOR PENETRATIONS OR RISERS THROUGH THE BUILDING, DO NOT PENETRATE STRUCTURAL MEMBERS WITHOUT STRUCTURAL EXCINEER'S APPROVAL SLEEVES AND/OR PENETRATIONS IN FIRE RATED CONSTRUCTION SHALL BE PACKED WITH FIRE RATED MATERIAL WHICH SHALL MAINTAIN THE RIFE RATING OF THE STRUCTURE. FILL FOR FLOOR PENETRATIONS SHALL PREVENT PASSAGE OF WATER, SMOKE FIRE AND FUMES, ALL MATERIAL SHALL BE UL APPROVED FOR THIS PURPOSE.

GENERAL PROJECT NOTES:

- FOR THE PURPOSE OF CONSTRUCTION DRAWINGS, THE FOLLOWING DEFINITIONS SHALL APPLY:
 OWNER AT&T
 CONTRACTOR GENERAL CONTRACTOR (CONSTRUCTION)
- ALL SITE WORK SHALL BE COMPLETED AS INDICATED ON THE DRAWINGS AND PROJECT SPECIFICATIONS.
- DRAWINGS PROVIDED HERE ARE NOT TO BE SCALED AND ARE INTENDED TO SHOW OUTLINE ONLY. CONTRACTOR SHALL FIELD VERIFY DIMENSIONS AS REQUIRED FOR BID AND CONSTRUCTION.
- 4. ALL MATERIALS FURNISHED AND INSTALLED SHALL BE IN STRICT ACCORDANCE WITH ALL APPLICABLE CODES, REGULATIONS, AND ORDINANCES. CONTRACTOR SHALL SSUE ALL APPROPRIATE NOTICES AND COMPLY WITH ALL LAWS, DRINANCES, RULES, REGULATIONS, AND LAWFUL ORDERS OF ANY PUBLIC AUTHORITY REGARDING THE PERFORMANCE OF THE WORK.
- 5. ALL WORK CARRIED OUT SHALL COMPLY WITH ALL APPLICABLE MUNICIPAL AND UTILITY COMPANY SPECIFICATIONS AND LOCAL JURISDICTIONAL CODES, ORDINANCES AND APPLICABLE REGULATIONS.
- UNLESS NOTED OTHERWISE, THE WORK SHALL INCLUDE FURNISHED MATERIALS, EQUIPMENT, APPURTEMANCES, AND LABOR NECESSARY TO COMPLETE ALL INSTALLATIONS AS INDICATED ON THE DRAWNINGS.
- THE CONTRACTOR SHALL INSTALL ALL EQUIPMENT AND MATERIALS IN ACCORDANCE WITH MANUFACTURER'S RECOMMENDATIONS UNLESS SPECIFICALLY STATED OTHERWISE.
- IF THE SPECIFIED EQUIPMENT CANNOT BE INSTALLED AS SHOWN ON THESE DRAWINGS, THE CONTRACTOR SHALL PROPOSE AN ALTERNATIVE INSTALLATION SPACE FOR APPROVAL BY THE CONTRACTOR.
- THE CONTRACTOR SHALL PROTECT EXISTING IMPROVEMENTS, PAVEMENTS, CURBS, LANDSCAPING AND STRUCTURES. ANY DAMAGED PART SHALL BE REPAIRED AT CONTRACTOR'S EXPENSE TO THE SATISFACTION OF THE OWNER.
- 10. THE CONTRACTOR SHALL CONTACT UTILITY LOCATING SERVICES PRIOR TO START OF CONSTRUCTION.
- 11. ALL EXISTING ACTIVE SEWER, WATER, GAS, ELECTRIC AND OTHER UTILITIES WHERE ENCOUNTERED IN THE WORK AREA. SHALL BE PROTECTED AT ALL TIMES, AND WHERE REQUIRED FOR THE PROPER EXECUTION OF THE WORK, SHALL BE RELOCATED AS DIRECTED. EXTREME CAUTION SHOULD BE USED BY THE CONTRACTOR WHEN EXCAVATING OR DRILLING PIERS AROUND OR NEAR UTILITIES. CONTRACTOR SHALL PROVIDE SAFETY TRAINING FOR THE WORKING CREW. THIS WILL INCLUDE BUT NOT BE LIMITED TO: FALL PROTECTION, CONFINED SPACE, ELECTRICAL SAFETY AND TRENCHING & EXCAVATION.
- 12. ALL EXISTING ACTIVE SEWER, WATER, GAS, ELECTRIC AND OTHER UTILITIES, WHICH INTERFEEE WITH THE EXECUTION OF THE WORK, SHALL BE REMOVED AND/OR CAPPED, PLUGGED OR OTHERWISE DISCONNIUED AT POINTS WHICH WILL NOT INTERFERE WITH THE EXECUTION OF THE WORK, AS DIRECTED BY THE RESPONSIBLE ENGINEER, AND SUBJECT TO THE APPROVAL OF THE OWNER AND/OR LOCAL UTILITIES.
- 13. THE AREAS OF THE OWNER'S PROPERTY DISTURBED BY THE WORK AND NOT COVERED BY THE TOWER. EQUIPMENT OR DRIVEWAY, SHALL BE GRADED TO A UNIFORM SLOPE, AND STRBILIZED TO PREVENT EROSION.
- 14. THE CONTRACTOR SHALL MINIMIZE DISTURBANCE TO EXISTING SITE DURING CONSTRUCTION. EROSION CONTROL MEASURES, IF REQUIRED DURING CONSTRUCTION, SHALL BE IN CONFORMANCE WITH THE LOCAL GUIDELINES FOR EROSION AND SEDIMENT CONTROL.
- 15. THE CONTRACTOR SHALL LEAVE PREMISES IN A CLEAN CONDITION.
- 16. THE SUBGRADE SHALL BE COMPACTED AND BROUGHT TO A SMOOTH UNIFORM GRADE PRIOR TO FINISHED SURFACE APPLICATION.
- 17. THE SITE SHALL BE GRADED TO CAUSE SURFACE WATER TO FLOW AWAY FROM THE TELECOMMUNICATIONS EQUIPMENT.
- 18. IF NECESSARY, RUBBISH, STUMPS, DEBRIS, STICKS, STONES AND OTHER REFUSE SHALL BE REMOVED FROM THE SITE AND DISPOSED OF LEGALLY.
- 19. THE CONTRACTOR SHALL PROVIDE SITE SIGNAGE IN ACCORDANCE WITH THE TECHNICAL SPECIFICATION FOR THE SITE SIGNAGE.
- 20. THE CONTRACTOR SHALL LEAVE PREMISES IN A CLEAN CONDITIONS.
- 21. THE CONTRACTOR SHALL DISPOSE OF ANY EQUIPMENT REMOVED AS PART OF THE WORK SHOWN IN THESE DRAWINGS IN ACCORDANCE WITH ALL LOCAL STATE AND FEDERAL REQUIREMENTS. ANTENNAS REMOVED SHALL BE RECYCLED WHERE FEASIBLE BY THE CONTRACTOR.

PROJECT COMPLIANCE NOTES:

- THE PROPOSED FACILITY WILL BE UNMANNED AND DOES NOT REQUIRE POTABLE WATER OR SEWER SETWICE AND IS NOT FOR HUMAN HABITAT. (NO HANDICAP ACCESS IS REQUIRED).
- OCCUPANCY IS LIMITED TO PERIODIC MAINTENANCE AND INSPECTION, APPROXIMATELY 2 TIMES PER MONTH, BY AT&T TECHNICIANS.
- 3. NO NOISE, SMOKE, DUST, OR ODOR WILL RESULT FROM THIS PROPOSAL.
- 4. OUTDOOR STORAGE AND SOLID WASTE CONTAINERS ARE NOT PROPOSED.
- 5. ALL MATERIAL SHALL BE FURNISHED AND WORK SHALL BE PERFORMED IN ACCORDANCE WITH THE LATEST AT&T SYSTEM GROUNDING STANDARDS, "TECHNICAL SPECIFICATION FOR CONSTRUCTION OF OSM/CPRS WIRELESS SITES", "TECHNICAL SPECIFICATION FOR FACILITY (GROUNDING", IN CASE OF A CONFLICT BETWEEN THE CONSTRUCTION SPECIFICATION AND THE DRAWINGS, THE DRAWINGS SHALL GOVERN.
- THE CONTRACTOR SHALL BE RESPONSIBLE FOR REPAIRING ANY DAMAGE CAUSED DURING CONSTRUCTION OPERATION.
- THE CONTRACTOR SHALL BE RESPONSIBLE FOR OBTAINING ALL PERMITS AND INSPECTIONS REQUIRED FOR CONSTRUCTION.
- 8. THE CONTRACTOR SHALL REMOVE ALL TRASH AND DEBRIS FROM THE SITE ON A DAILY BASIS.
- INFORMATION SHOWN ON THESE DRAWINGS WAS OBTAINED FROM DRAWINGS PROVIDED BY THE APPLICANT REPRESENTATIVE. THE CONTRACTOR SHALL NOTIFY ATAT OF ANY DISCREPANCIES PRIOR TO ORDERING MATERIAL OR PROCEEDING WITH CONSTRUCTION.
- 10. NO ADDITIONAL PARKING IS PROPOSED. EXISTING ACCESS AND PARKING WILL BE
- 11. NO ADDITIONAL LANDSCAPING IS PROPOSED AT THIS SITE.
- 12. ALL COAXIAL & FIBER CABLE INSTALLATION TO FOLLOW MANUFACTURER'S INSTRUCTIONS.
- 13, ALL WORK AND MATERIALS SHALL BE PERFORMED AND INSTALLED IN ACCORDANCE WITH THE CURRENT EDITIONS OF THE FOLLOWING CODES AS ADDITED BY THE LOCAL JURISDICTIONS COVERING AUTHORITIES, NOTHING IN THESE PLANS IS TO BE CONSTRUED TO PERMIT WORK NOT CONFORMING TO THESE CODES.
- 14. TRANSMITTER EQUIPMENT AND ANTENNAS ARE DESIGNED TO MEET ANSI/EIA/TIA 222-F REQUIREMENTS.
- 15. ALL STRUCTURAL ELEMENTS SHALL BE HOT DIPPED GALVANIZED STEEL.
- 16. CONTRACTOR SHALL MAKE A UTILITY "ONE CALL." TO LOCATE ALL UTILITIES PRIOR TO EXCAVATING.

TOTALLY COMMITTED.
